INTRODUCTION

This booklet of readings and accompanying student activities on the Philippines has been developed and assembled at the Center for Philippine Studies at the University of Hawai'i. The project was initiated at the request of educators across the county who have expressed their concern about the lack of educational materials for intermediate and high school students on the Philippines.

Lessons and activities follow a chronological sequence, and educators will find that the entire book provides a good resource for students interested in the Philippines, although the individual teacher may wish to select specific sections of the book to emphasize.

Ms. Shackford, who holds an M.A. in Southeast Asian Studies from the University of Hawai'i, introduces the reader to the area in pre-historic times and continues the lessons into the stormy Corazon Aquino political era. Each narrative section of the book is amply provided with labeled and blank maps as well as numerous activities which can be used as open book tests, in classroom discussions, or as homework assignments.

Some sections of the book will require more teacher assistance than others, but the lessons are well organized and will provide sufficient background to enable the student to complete the activities at the end of each lesson by referring to the reading preceding it.

The Center for Philippine Studies is pleased to offer this book to classroom teachers in Hawai'i, and in other states and countries, who would like to expose their students to the history, geography, and culture of the Philippines.

The Center wishes to acknowledge the generous support of the Henry Luce Foundation, Inc., without whose assistance "The Philippines: Historical Overview" would not have been possible.

For further information on obtaining this book please contact the Center for Philippine Studies, University of Hawai'i, 1890 East-West Road, Moore Hall 416, Honolulu, Hi 96822.

Belinda A. Aquino
Editor
The population of the Philippines is around 63,200,000 people. Filipinos live and work in an area which encompasses 300,000 sq. kilometers of land on 7,109 islands and islets. Today in the Philippines, one can come into contact with a diversity of lifestyles ranging from those of people grouped as cultural communities (or ethnic minorities) who have many different sets of traditions developed well before Spanish colonization, to the fast-paced lives of international businessmen and women who reside in Manila and other big cities. In the cities, great diversity also can be seen; often there are high-rise apartments in the same neighborhood as "squatters" who live in the streets or in homemade cardboard houses.

The majority of Filipinos make a living from agriculture and fishing in lowland and coastal areas, while in the mountains, the people also grow rice and other crops as well as hunt. In more urban centers or on development projects, people might work in factories, in fields where cash crops are grown, in timbering operations or be involved in the "service and tourist economy," meaning that they work in hotels, shops and restaurants.

There are many ways to categorize the people of the Philippines although no set of categories will truly include every Filipino. Most people identify themselves strongly with their religion. In the Philippines, there are two major world religions, Christianity, (90% of the population) and Islam (5-7%). In addition, each Cultural Community practices its own distinct religion. These number in the hundreds.

Filipinos also feel a strong bond with the area in which they were born and raised, so that, for many people, allegiance to extended family, village,
and then local area is just as important as their Filipino heritage. The islands of the Philippines have been divided by the government into 12 geographical regions which stretch from from the northernmost island groups of Babuyan and Batanes, 50 miles south of Taiwan, to the islands of the Sulu Archipelago which nearly reach northern Borneo, in Malaysia. Each region is subdivided into provinces, and each province has a capital. Throughout these regions, there are hundreds of different written and spoken languages and consequently, each region is home to many different kinds of people.

Part 1—RELIGIOUS GROUPS

CULTURAL COMMUNITIES

Indigenous religions in the Philippines were practiced long before Spanish colonization. Today, groups who practiced these religions (known today as "cultural minorities" or cultural communities) generally tend to live in the upland or mountainous areas, where they moved, throughout the past 400 years, to avoid the colonizers. Some of these groups have as few as 200 members, which gives them little political influence. They are also separated from each other by land, by language, and by a long tradition of living independently, except to trade with one another or with lowlanders.

Members of cultural communities generally practice shifting cultivation agriculture, which means that either some members of the group or the entire group moves once every 2-3 years within a large area, so that they can find new land on which to grow rice. Apart from this, Cultural Communities are very diverse depending on the climate and general environmental conditions they live in and how much contact these groups have had with outsiders. Most groups of cultural communities trade on some level with other groups or with
lowlanders, hunt or fish, and have crafts which are unique to the group. Some groups are highly literate with their own type of script, other groups have intricate political systems. The main attribute held by cultural communities is that they practice basically the same life-styles as they did before Spanish or American colonization, although this is rapidly changing with present conditions in the Philippines.

THE MOROS

Moro is a name which has been taken by the 13 groups in the Southern Philippines who practice the religion of Islam. The Moros inhabit the island of Mindanao, the Sulu Archipelago, and southern parts of the island of Palawan. Islam in the Southern Philippines is a unique blend of Filipino and Muslim traits, but Muslim Filipinos often see themselves as having more in common with their Islamic neighbors in Malaysia and Indonesia, and with Muslims in the Middle East, than with other Filipinos.

The Moros also see their land and livelihood threatened by Christian Filipinos, as it has been since the beginning of Spanish colonization, 400 years ago. Ever since the Spanish trained Christian Filipinos to be soldiers to help them in their battles against the Moros, the Christians and Moros have been enemies.

Generally, the Moros use the same agricultural techniques as their Christian neighbors, and they also fish and hunt. However, their legal codes and other aspects of life come from the Koran, the holy book of Islam, so that some aspects of their lives are quite different from other Filipinos. This causes difficulty in the relations not only between these two groups who
live side by side on the island of Mindanao, but between the Moros and the central government as well.

Christian Filipinos

Christian Filipinos constitute the majority. Yet, outside the bounds of their religion, Christian Filipinos have extremely varied lifestyles. In fact, even within the Christian religion, methods of practicing Christianity are different in almost every region. This is because many people strongly believe in certain individual Christian saints, and most villages are identified with this allegiance to a particular saint.

Because they are the majority, Christian Filipinos are the most visible to the rest of the world and in the Philippines, holding most of the land and government positions. In the past, Christian Filipinos were found mainly in the northern areas of the Philippines and the Visayas. However, more recently many Christian Filipinos have moved south to Mindanao and Palawan, where they have been provided with arable land by the government, something which is in short supply in the northern areas.

Chinese Filipinos

Although they are not considered members of a separate religious group in the Philippines, since they are mostly Christian now, the Chinese constitute an important minority. Even though they make up only 1-2% of the population, Chinese people are very visible because they tend to engage in trade and small businesses, and therefore they tend to live in urban areas—50% of Chinese Filipinos reside in Manila, with other large populations in Cebu City and Davao City.
The Chinese have often been the focus of racism in the Philippines, especially during the Spanish colonial era, when they were considered to be competition for the Spanish in business. Anti-Chinese riots broke out during troubled economic periods of the 17th and 18th centuries. Later, however, Chinese Filipinos known as mestizos became an important part of the educated elite and helped to lead the revolution against Spain.

Chinese Filipinos were also restricted in their business endeavors during the American colonial period and during the early years of independence. Often, they were seen as having their own sub-culture within the culture, in other words, speaking Chinese, eating Chinese food, following their own holidays and religions, but this is no longer true in the Philippines. Many mainstream Filipinos foods were originally introduced by the Chinese. In addition, throughout the years, many Chinese people have joined the Christian religion. Therefore, although people still see the Chinese as economic competition, the fact that this sub-group is not very active politically makes them seem less threatening so that today, the Chinese are a much more integrated part of society.

Part 2—GEOGRAPHICAL REGIONS

The archipelago of the Philippines covers about 500,000 square miles of ocean. It is bordered on one side by the Pacific Ocean and on the other by the South China Sea. Because the archipelago is made up of more than 7,000 islands, the geography of this nation is radically varied and there are few blanket statements which can be made about the geography or environment of all the islands.

Perhaps the most divergent feature in these islands is the temperature, which averages about 80 degrees in the lowland areas and about 64 degrees in
the highlands. Philippines weather and environment is tropical. However, because of different wind patterns which flow across these islands, tropical does not necessarily mean heavy rainfall in all areas. Rather, the northern and southern areas get the greatest amount of rain while dry winds sweep across the middle, in the Visayas. Heavy rainfall in the north and south means heavy weathering on rocks and mountains which gives these parts of the Philippines a sharp landscape with many high peaks and narrow valleys.

The landscape is comprised of gulfs, bays, inlets, peninsulas. There are also many active volcanos in this archipelago from the northernmost in Batanes to some in Mindanao. People tend to congregate in areas which will be best for agriculture, and there are only two very wide river valleys which provide wide and fertile plains—the Cagayan in Luzon and the Agusan in Mindanao.

Some groups, mainly cultural communities, prefer the forests, which are also extremely varied. At the highest elevations, one can find pine forests, while along the swampy coasts there are mangrove swamps. There are also dense tropical rain forests, and bamboo thickets, as well as forests of such usable products as the nipa palm, which has sap that is used for vinegar and alcohol and grows in coastal areas, and rattan, used for a number of products, including furniture.

What becomes clear in the Philippines is that the varied geography has created a variety of people and lifestyles. While rice is the most important crop, many Filipinos also try to make a living from what they find around them. This means that most Filipinos outside cities can collect fruits and plants which grow wild such as peppers and herbs. Most people also have a "kitchen garden" in their yards, in which various fruits and vegetables are grown. Other collectible items are found in the sea, so that in the Sulu Ar-
chipelago and other areas where there are coral reefs and shallow water for great distances off the coast, coral, shells, and other sea creatures are collected for eating and for selling. The coasts of other areas are extremely deep, bordering on an ocean trough so that other kinds of fish and marine life are found.

The mountains provide different woods that can be used for carving, and people hunt wild pigs and deer as well as local animals, such as alligators in Mindanao. Among the many animals which are found throughout the Philippines are squirrels, tree shrews, lemurs, cats, monkeys, water buffalo and bats, as well as 500 species of birds which come seasonally.

The most common style of house found in the Philippines is the bamboo dwelling built on stilts with a thatched roof. These houses are built for coolness, and hardwood poles holding the house anywhere from 7-8 feet off the ground keep families safe from whatever kinds of creatures might be wandering around below. These houses are made of light materials so that they are easy to build, and to rebuild in case of a natural disaster.

In the cities and in the growing residential suburban areas, there are ground level houses with yards paved with wood or concrete.

The Northern Philippines and Luzon

On the island of Luzon, the land provides natural borders between communities, most of which are centered economically around the large metropolis of Manila, Quezon City, Caloocan City and Pasay City. Being the largest island and a large land mass, Luzon has mountain ranges which run parallel to the coasts
and two wide, lowland areas which are created by fertile river valleys in the interiors. These two lowland areas are in the Cagayan Valley and the Central Plain. Along the northern coasts, there are narrow coastal plains which stretch between the mountains ranges and the ocean. These areas are more difficult to use for agriculture, although this does not stop the people who live there from growing many crops. In the southeastern part of Luzon is the long narrow and somewhat volcanic peninsula, known as the Bicol region. Off the coasts of Bicol, there are many active volcanos which create smaller volcanic islands.

In the southwestern area is the huge lake known as Laguna de Bay, which was probably part of Manila bay at one time. This lake is the largest mainland area of water in the Philippines, with a span of 356 square miles, and which can also grow during the flood season as the surrounding plains get covered over with water.

Like most of the regions in the Philippines, Ilocos has a few distinct geographical parts—the lowlands, or narrow coastal plain on the western coast and the mountainous area known as the Sierra Madre Range to the east. The major cities of Ilocos dot the coast and this is where the population is densest and even somewhat urbanized. Six major rivers run down from the mountains to irrigate the coastal plains of Ilocos, upon which 53% of the country's tobacco is grown. Rice is also grown, but not in sufficient quantities to meet all the needs of the population. Instead, many farmers have switched to cash crops including sugar cane and bananas. Fishing is also an important part of the economy, as is the production of salt.
Mountainous areas have forests of Banguet Pine, as well as hardwoods. The highest elevations in these parts of the Sierra Madres is about 9,600 feet. At these heights, one can find dense moss forests. These mountainous areas are the homes to many cultural communities. Yams, taro, and sweet potatoes are grown here, as is rice on the intricate terraces which were built hundreds of years ago by the Bontoc and other groups. Mining is also important in these areas, so that silver, copper, iron, and zinc as well as 74% of the country's gold output comes from Ilocos.

The Cagayan Valley region has three different types of geography. This region includes the two small island clusters north of Luzon called Babuyan and Batanes. Of the 8 islands here, most originated from volcanoes, some of which are still active, so that only 6 of these are inhabited. Y'ami, the northernmost island, is only 50 miles from Taiwan so that the people on Y'ami have features similar to those of indigenous Taiwanese.

This region also includes the Cagayan River Valley, a lowland plain, and the mountain ranges which surround it on three sides—the Sierra Madres to the east, the Cordilleras to the west, and the

-9-
Caraballos to the south. These are some of the most rugged mountain ranges, with peaks reaching to about 6,000 ft.

The Cagayan Valley's vast, dry grass lands are used for raising cattle, while the river's fertile soil makes this an ideal area for agriculture. Because it is edged on three sides by mountain ranges, there is not a lot of harsh weather, but rather a steady flow of humid air and some rain. Sixty-five percent of this area is devoted to the growing of rice, corn and other crops. The fertility of the soil allows people here to grow corn and tobacco alternately on the same land.

In the provinces of Isabela, Nueva Viscaya and Cagayan, timber operations are also under way.

Since the 1940s, the population of this area has grown steadily, with many Ilocanos moving eastward to this region. Transportation here is somewhat difficult, since many inland parts of the valley can only be reached on light barges and rafts. Cities of the Cagayan Valley region however, are mostly located along the Cagayan and Chico Rivers, so that a large part of the population congregates there.
Central Luzon is known as the "rice bin of the Philippines." Because of some heavy rainfall and the fact that more than four rivers come together in this area, the soil is very fertile in this lowland plain. This valley and the Cagayan River Valley are two of the largest lowland plain areas in the Philippines. This Central Plain area has a dry season and a rainy season so that, until recently, even though crops were only grown in the 6-month wet season, the area still produced a rice surplus. Today, with modern irrigation, this area produces more than enough rice to feed Manila. In this century, cash crops which have been introduced are sugar, peanuts, and tobacco.

Actually, Central Luzon has both lowlands and mountainous areas. To the west of the Central Plain are the Zambales mountains which are made up of high peaks with short rivers running through. On the higher slopes of the Zambales are dense forests, while on the lower plains, one finds grasslands. On the western coast of the Zambales, there are some wide coastal swamps which have been fenced off for fishponds and also to produce salt.
To the east of the 40-mile wide Central Plain is the Western Cordillera, another mountain range in which logging and mining take place today. In these mountain areas, taro, yams, beans and sweet potato are grown.

By 1572, large parts of Central Luzon were under Spanish control, and the rest soon followed. By the 1800s it was already heavily populated, so that by the beginning of the twentieth century, there was no more land to buy. As a result, farm sizes have shrunk as the population grew. In addition, this has been the site of much controversy over land ownership and use so that the HUK movement was very strong here. Today, the population is very dense.

This region is also the site of the United States, Clark Airforce Base in Angeles, Pampanga. This has become a shopping and recreational center for Americans, and is also used for off-base housing for military personnel.

The Southern Tagalog Region is an extremely large region which includes many different kinds of terrain, people and islands. This region includes the southwestern part of the island of Luzon, Metro-Manila (in the province of Rizal) as well as the islands of Mindoro and Palawan.

Manila and its surrounding cities and suburbs greatly affects this region. It is the center of the entire Philippines, and the center of the government. Manila is located on the protected coast of the Manila Bay, so that the use harbors is not impeded by weather. Mountains to the east of the city also protect it from tropical storms.

The Spanish first approached Manila in 1570, where they found Moro and Tagalog settlements which they quickly destroyed. This city was also occupied by the Americans in 1898. Throughout the years, it been wiped out by major fires and bombing and been rebuilt many times. It is a focal point for
many Filipinos who dream of a new future for themselves or are simply looking for work. By 1990, the population of metro-Manila was about 8 million.

The peninsula below Manila and the small islands which lie off the tip of Luzon are also part of the Southern Tagalog Region. This area is largely volcanic, with many high peaks and crater lakes. Two major lakes in this section are the Laguna de Bay, which was once probably part of Manila Bay, and Lake Taal to the south. Many of these lakes have flooding periods and therefore help produce good fertile soil, so that the area has continued to grow in population since the Spanish spread themselves out around Laguna de Bay early in their colonization period. Despite the fact that the Spanish tried to destroy remains of pre-Christian life, many important pre-historic remains have been found in the province of Batangas.

Rice, corn, coconuts, coffee and cacao are some of the crops which are grown here today. Fishponds and salt production are also an important part
of the economy and there are 3 petroleum refineries here.

The geography of the island of Mindoro is more like that which is found in the Visayas. The two provinces of Mindoro Occidental and Mindoro Oriental are separated by a rough mountain range which is covered by dense, tropical rain forests which have been known for their malarial mosquitoes. The name Mindoro meant "gold mine" to the Spanish, but gold is no longer mined here. Today, many people from Luzon migrate to Mindoro to find opportunities for cash crop farming. This has lead to more problems for the shrinking groups of cultural communities who still live in upland areas.

The island of Palawan is an area of rugged mountain ranges and narrow coastal plains. Two high peaks of this island are Mt. Mantalingajan (6,839 ft) and Cleopatra's Needle (5,199 ft). This island's population is limited; one reason is because of the coral surrounding most coasts which makes them difficult to approach by boat.

Since World War II, however, more and more people have moved to Palawan to exploit the resources there. Manganese, chromite, mercury, and silica are mined, and the forests of this island have many different and exotic types of woods for timber. Coconuts are the major cash crop here.
The southernmost region in Luzon is Bicol. The majority of people here are Christian Bicolanos, who live along a narrow, volcanic peninsula in southeastern Luzon and on the smaller islands to the south. An irregular coastline and many bays and inlets make this area ideal for fishing, so that 75% of the population here is involved in fishing, farming or logging, even though most of the forest lands of Bicol have already been cleared away to make room for the dense population. Abaca, now used for paper and previously used by the Spanish for clothing and rope, is an important cash crop in this region.

This entire region is often hit by typhoons between September and November. Even though these storms are frequent and destructive, there is plenty of farming done in Bicol, with about 60% of the land used for that purpose. There is also a fair amount of mining, especially in Camarines Norte, where gold, copper, iron, silver, lead and coal are extracted.

In the province of Albay, Legaspi City is one of the major ports of the Pacific. This port is connected to the rest of the Philippines by the new
Pan-Philippine National Highway, which goes south through the eastern Philippines from Camarines Norte.

This region also includes the islands south of the Bicol peninsula in the Sibuyan Sea—Masbate, Burias, Ticao, and others.

The Visayas

The islands of the Visayas, including, Panay, Negros, Cebu, Leyte and Samar, are located around the Sibuyan or Visayan Sea. This area is home to about 30% of the population of the Philippines.

In the Visayas, the islands are smaller, and are usually shaped with a large mountain range running down the center, so that the majority of the people live along coastal areas, while cultural communities tend to dwell in the mountainous parts of the islands. For these islanders, travel is often easier by crossing the narrow waterways which separate the islands than by traversing these large mountain ranges. Therefore, it is not unusual to find similar groups which speak the same language on facing coasts. Because these islands do not have large river valleys and plains, there is less room for agriculture, and consequently more Visayans migrate elsewhere than any other group, either south to Mindanao or north to Luzon to find employment or more land.

In the two islands of the Western Visayas, Panay and Negros, sugar is the main industry. Sixty-eight percent of all the sugar grown in the Philippines comes from the low fertile plains near the coasts of these islands. Large fishing companies which export prawns, shrimp and sardines from this area, and cash crops including bananas, corn, rice, tobacco and pineapple are grown.
Mining is also prevalent, but the sugar industry is the most important source of revenue for the area. A large amount of the sugar cane grown on Panay comes from the western highlands of that island which are high and broad. Negros also has wide and broad plains, which is a site for the cultural communities who live in Negros.

This abundant sugar production takes place mainly on the broad lowlands of the Iloilo Plain and the Tablas Plateau. Because of the sugar centrals which have grown in these areas, they have become densely populated and urbanized. Unfortunately, areas of Negros, including the northwestern coast suffer from a
rice deficiency and a high rate of landlessness among their inhabitants.

Iloilo, the principle city of the Western Visayas, is located near where the Spanish first settled in this area, in 1569.

The Central Visayas include the island of Cebu, one of the first islands visited by the Spanish. Cebu, because it is so densely populated, has become a central area from which many people emigrate, especially south to Mindanao. For this reason, Cebuano is the most widely spoken language in the Philippines. Even though there is a shortage of lowland plains here, this island has a significant coconut industry. Fresh fish and fish for canning including herring, sardines, anchovies mackerel, crab, and shrimp are abundant. Unfortunately, most of the forests have already been cut on Cebu.

Other islands in the Central Visayas are Negros Oriental, Bohol and Siquijor. Because less rain falls in these areas, they produce more corn than rice. They are also known for their exportation of copra, coconut oil and commercial coconut. Fishing, rice, and mining also bring revenue into these
areas, as well as sweet mangoes, jackfruit and papayas which can be exported to Japan and Hong Kong.

The Eastern Visayas is the most rugged area of the Visayas, with the high mountain peaks of Leyte and the forests of Samar. The western coast of Leyte is the most populated area in this region. Sugar, abaca, coconut and tobacco are cash crops on Leyte, while Samar produces rice, corn and root crops. Tuna and seaweed are also important industries off the coasts of Samar, while fishponds are used inland. Samar's humid and swampy terrain makes good land for these and wet rice fields. Wet weather occurs on Samar because clouds are trapped here and do not move across the dryer Visayas. Samar is the third largest island of the Philippine archipelago, and is separated from
Leyte by the narrow San Juanico Strait. The body of water is treacherous to pass, even though at some points it is only 200 yards wide. Because of fierce typhoons, it is sometimes difficult to grow crops. Samar is an exception to the geographical rule of the Visayas. Without a major mountain range, this area has a lower, hilly terrain and many rivers which serve as transportation.

**Mindanao**

One old story told in Mindanao is that all of the people in this area were the same at one point, until some became Christians, some became Muslims, and the others stayed the way they were. Actually, because of high migration, Christian Filipinos, mainly Cebuanos, occupy most of the coastal areas of this region, making up 95% of the population.

Mindanao, like Luzon, is also divided into regions by natural boundaries. In Central Mindanao, there are still large volcanos which have created crater lakes, such as Lake Lanao, and which provide fertile alluvial soil. Like Luzon, Mindanao has large amounts of agricultural activity because of two wide river valleys, surrounding the Agusan River on the eastern coast and the Punlangi or Rio Grande de Mindanao in the central and western parts. There are also numerous smaller river plains.

Mindanao's large mountains act to collect the clouds coming up from the south, giving this island heavy amounts of rainfall and making a sharp contrast to the dryer Visayas. While this is good for village agriculture, it has also brought in numerous foreign companies to grow cash crops such as pineapples and rubber trees.

The Sulu archipelago, part of Western Mindanao, presents a very dif-
A different type of geography. Many of the 958 islands in this archipelago are less than a mile wide, and only 8 of them are inhabited. These islands are mainly clustered in 3 groups around the larger islands Tawi-Tawi, Basilan and Jolo. Most of the economy here centers around fishing and collecting marine life in the calm, shallow waters around the islands which are rich with fish, coral, shells, birds nests, shark, mother-of-pearl, turtle eggs, and agar, a type of seaweed popular in Japan.

On the mainland of Western Mindanao, the provinces of Zamboanga Del Sur and Zamboanga Del Norte are separated by a natural border of mountains, the Zamboanga Cordillera. Zamboanga City is a major port. This area of few lowlands and very dry temperatures has been recently populated by Christian Filipinos, although in the last century, it was the site of much Spanish-Moro fighting. In the northern part of this region, in a city called Dapitan, on Dapitan Bay, is the site where the famous Filipino hero Jose Rizal was exiled by the Spanish in 1892.
Many people have also migrated from the Visayas and Luzon to Northern Mindanao, which has large quantities of fertile land in the mountains and valleys around the Agusan River. This is one of the largest river systems in the Philippines, so that annual flooding in its deltas and lowlands provide ideal conditions for agriculture. Flooding also occurs around Lake Mainit, which is the fourth largest lake in the country.

The high amounts of rainfall and moist winds in this area also make it ideal for timbering and other agribusiness, including the growing of sugar, tobacco, palm trees for palm oil, and fruits such as passion fruit, bananas, papayas, and coconuts for coconut products such as copra. In the provinces of Surigao del Norte and del Sur, most cities along the coast are Cebuano speak-
ers. Some mining for iron ores occurs in this area on the islands and uppermost parts of the peninsulas of Surigao del Norte.

In the western section of this region is the area of Bukidnon, which is also surrounding a larger river of Mindanao, known as the Rio Grande de Mindanao or the Pulangi. Because of the volcanic soil around the Bukidnon Plateau, as well as the heavy rainfall, this area is also quite good for agriculture, so that surplus food is the result. This area is also the site of a large pineapple industry, the Philippine Packing Co., which is a subsidiary of Del Monte. This company controls about 16,000 acres in the region.

The major city of Mindanao, Davao City is found in Southern Mindanao. This is also a region of great diversity. This city has a number of large ports for the shipping of the many natural resources found on Mindanao, and three major Philippine universities.

Southern Mindanao is perhaps the area which has grown the most in population and in industry in this century. Many rivers flow through this area into the Davao gulf near Davao City. Outside this urban center, agriculture is the main business in this region. This includes the shifting cultivation of the Manobo and Bagobo peoples, in highlands throughout the region, the growing farmlands which are run by Cebuanos and other immigrants and which produce rice and corn, and the large estates which grow pineapples, coconut, and abaca, among other crops.

Outside of Davao City in areas where the many tributaries of the Agusan River come together are mangrove forests with swamp and marsh vegetations. Nevertheless, this area also produces a surplus of corn and rice. Other crops which are grown in the dryer areas include cassava, sweet potatoes, gabi as
well as tomatoes, papayas, bananas, and corn.

Rich tropical rain forests in the highlands of Southern Mindanao have also created a large lumber industry which includes the cutting and the milling of timber. Because Davao City is a large national and international port city, many of the resources exploited in this region are easily transported out for commerce.

One of the rainiest regions of the Philippines, and with half of this region's land on a slope, Southern Mindanao has extensive mountain ranges occupied by many of the Cultural Communities of the Philippines, who continue to make up 33% of this region. The majority of the areas in which the cultural communities reside are mountainous forest, plateaus, and plains. Some of this land has been made into national forests and parks.
Central Mindanao, like the Sulu archipelago, has a large Muslim population. Lanao del Sur, one province in this region, has a Muslim population of 99.9%.

The province of Maguindanao was, at one time, known to be the home of the most powerful Muslims of Mindanao. The province of Sultan Kudarat, named after a Filipino Muslim hero for his bravery against the Spanish, is also an important area in the history of the Muslim Sultanates of the Philippines.

The Moros of Maguindanao have been the dominant Muslim group in the Philippines, first settling in Cotabato, then moving over to Davao. Many Moros as well as some groups of cultural communities moved to upland areas after the influx of Christian immigrants began, around the turn of the century. However, as in the other areas of Mindanao, this influx greatly increased in 1948, when up to 700,000 new settlers would arrive yearly.
Earlier in this century, this area was considered to be one large province, called Cotabato. Since that time, it has been divided into a number of provinces, which are separated mostly by their different kinds of geography in this area. Today, this region is still an area of beautiful volcanic peaks and crater lakes. Fertile alluvial soil from the volcanos makes Central Mindanao ideal for agriculture, which today includes the cash crops of coffee, coconuts, palm oil, cassava, rubber and sugar, mostly grown on large estates by a small number of controlling families.

In this area, there are also two main types of terrain, the highlands, which are made up of the Tiruray Highlands also known as the Cotabato Cordillera, and the lowland plains surrounding the Pulangi River or Rio Grande de Mindanao. Many cultural communities have lived in the Tiruray Highlands which are in the Southwest corner of the region, along the coast. The low-lying swampy plain which surrounds the Pulangi River is also known as the Cotabato Valley.

Also found in this region are some dry, mid-level plains upon which rice and corn are grown in amounts which create a surplus for the region.

mangrove swamp  
swampy area in tropical coastal regions where mangrove trees or shrubs grow; these trees are characterized by their thick roots and are propped up above the water by them.

Moro  
in the Philippines, name for Muslim Filipinos which was given to them by the Spanish and later adopted by the 13 ethnic groups in the Southern Philippines which practice Islam.

nipa palm  
a type of palm which grows in wet areas and which is used for weaving, basketry, and to make palm wine.

rattan  
palm with long and ropy stems, used to make cane furniture.

shifting cultivation  
a kind of farming, also called "swidden" or "fallow swidden" in which a plot of land is burned, then cultivated with nutrients that come from the burning process; after 2-3 years of cultivation, this land is left to grow into bush or jungle again so that the farming group moves on to another plot and can return after about 10 years.

sugar central  
a area where sugarcane is brought and processed into sugar products including molasses, refined sugar, etc.

sultanate  
a civic unit or region of an Islamic area which is ruled by a sultan.

   Palawan, Luzon, Mindoro,
   Bicol
   Mindanao
GENERAL QUESTIONS IN GEOGRAPHY

1. Name one major river in Luzon: Cagayan, Chico.
2. Name two major river systems in Mindanao: Rio Grande de Mindanao, Pulangi, Agusan.
3. Name three major mountain ranges in Luzon and the regions in which they are found:
   - Sierra Madre, in Ilocos, Cagayan Valley
   - Zambales, in Central Luzon
   - Caraballo, Cordilleras, in Cagayan Valley
4. Name the largest island in the Philippines: Luzon
   the second largest: Mindanao
   the third largest: Samar
5. The "rice bin of the Philippines" is in Central Luzon. Name two environmental conditions in Central Luzon which make it good for growing rice:
   - wet or rainy season, fertile soil, lowland plain, river basin
6. Name three crops which are grown in "dry agriculture," in upland areas:
   - sweet potatoes, cassava, yams, squash, beans, gabi
7. Name three different kinds of trees growing in the Philippines:
   - palm, nipa palm, bamboo, mangrove shrubs, Banquet pine, mango, rubber
8. Name four types of geography found in the Philippines (such as, but not including highland, peninsula, etc):
   - river basin, lowland, mountain range, bay, inlet, rain forest, archipelago, atoll, swamp, mangrove swamp, plateau, coastal plain, etc
9. The geography of Samar is different for this reason:
   - no mountain range goes across center of island, more flat and hilly
10. The Philippines archipelago covers ___50,000____ square miles of ocean.

Chapter 2: Pre-History of Southeast Asia

Introduction
Southeast Asia is a geographic area of the world which includes the countries of Brunei, Indonesia, Malaysia, the Philippines, Burma, Cambodia, Laos, Singapore, Thailand, and Vietnam. Brunei, Indonesia, Malaysia, the Philippines, and Singapore are known as Island Southeast Asia. The other countries are referred to as Mainland Southeast Asia.

From as early as one millennium BC, these countries were influenced by traders from India and China who introduced goods and ideas which were often unknown in these regions. The traders' ships also carried missionaries who felt it their duty to speak of their religions in the ports at which the ships docked. Three major world religions, Buddhism, Hinduism and Islam gradually spread throughout the area in this way. The arrival of these new ideas had a profound effect on the religions, cultures and politics of Southeast Asia.

During the 14th and 15th centuries, European traders and colonists became increasingly interested in Southeast Asia and proceeded to take control of these countries. With the exception of Thailand, Southeast Asia was colonized by Holland, Spain, France and Great Britain. The United States, in the early twentieth century, colonized the Philippines. The purpose of colonization was mostly for the export of spices, coffee, tea and other exotic goods not available in Europe. At the same time, the many colonists wished to proselytize Christianity to all people with whom they came into contact.

It was not until the 1960s and 1970s that the last Southeast Asian country was declared sovereign, or under its own independent rule. Colonial influences are still evident in Southeast Asia today in political, educational and religious systems. Independent governments are still being developed, due to the years of suppression by the colonial powers.

It is commonly thought that there was no culture and only a very primitive existence in Southeast Asia before the Chinese, Indian and European foreigners arrived with their important and lasting changes. This misconception was partly due to the way in which the traders and colonizers described the cultures they found; many of their accounts were accepted as history. People were described as barbaric because their ways of life differed from those of the newcomers. This was often the reason people used when capturing slaves, putting the people to work at very low wages, and forcing them to live according to beliefs other than their own. In some cases, it might have meant wearing certain kinds of clothing, in others, worshipping a different god.

Today, archaeologists and historians are very interested in the period known as pre-history, before trade and outside influence reached Southeast Asia. Throughout Southeast Asia, different obstacles get in the way of studying pre-history. In the Philippines, for example, the Spanish destroyed all religious artifacts and robbed graves for gold which they melted down into coins. Written materials were either burned in the frequent fires or decomposed in the tropical environment; records were kept on pieces of bark and bamboo which unfortunately does not hold up well over time. Another obstacle for archaeologists is that the land has changed; areas which were once dry have become swamps or may even be under the ocean. Therefore, it is still a challenge for anthropologists, archaeologists and other interested people to reconstruct possible movements and settlements of pre-historic peoples which will give us a better picture of life as it developed.
Prehistoric Land Masses

darkened area indicates possible land masses which occurred when ocean levels fell during the Ice Age.
The Pre-historic Land Masses

Archaeologists believe that, at one time, the islands of the Philippines were actually part of a few large land masses, connected by narrow strips of land known as land bridges. This was during the period known as the Ice Age, which lasted from a million years ago up until 10,000 years before the present (actually before the year 1950) or BP.

While the rest of the world experienced massive freezing and glacial activity in the extreme north and south, the area around the equator, where the Philippines is located, thrived. Ice Age freezing caused the level of the ocean to drop significantly, and exposed land from as far north as the island of Formosa, also known today as Taiwan, to the island of Borneo in the south. This area of land was covered by dense tropical rainforest.

As the glaciers slowly melted, the ocean's level rose and covered the land bridges, making the Philippines what it is today—an archipelago of over 7,000 islands. Because the people living in different areas gradually became separated by water, they developed various languages, religious systems and cultures.

Original Inhabitants

The first people known to have lived in the Philippines are believed to have descended from Tabon Man, so called because of skulls found in the Tabon Caves on the island of Palawan. The time period in which man was beginning to develop is called the Pleistocene Age, (from 500,000 years ago to 8,000 BP) and Tabon Man, the first Homo sapiens lived in caves during this latter part of the Pleistocene Age, from 40,000 years ago.
Tabon Man arrived in Palawan either by traveling south from Formosa or north from Borneo. Accompanying him during the Pleistocene Age were various animals including a prehistoric deer, elephas (small or pygmy elephant), and stegodon as well as more modern animals including pigs, crocodiles, birds, rhinoceros, antelope and snakes. Most likely, Tabon Man killed these animals for food by throwing rocks at them and then cutting them up with simple tools he made from river pebbles. He would hit the smaller pebbles against larger rocks until they flaked off into a sharp point. Many of these flake tools were found in and around the Tabon caves.

Later, other groups of people settled in the north, in the Cagayan Valley on the island of Luzon. Here, life was somewhat easier as the environment consisted of grassy plains near the mouths of rivers which are more conducive to hunting and farming. As people achieved more control over their environment and did not have to search constantly for food, they were able to create better tools made from harder stones and with sharper edges. Gradually, they developed elementary agricultural techniques from careful observation of what grew in the wild.

New technologies began to be developed, such as the use of iron and metals including bronze, copper, and gold. This took place during the Iron and Bronze Ages, which occurred from as early as 3,000 BC. Archaeologists use a system called Carbon-14 dating, a system which determines the general age of carbon found in fire sites. This helps to determine when and how man developed.

Most likely, concepts such as forging iron, which involves heating the iron over a very hot flame, shaping it while it is soft, then plunging it in cold water so it will retain its shape, were developed somewhat earlier in
other areas, and then brought to the Philippines by traders and wandering peoples who arrived by boat and settled in the Philippines. When early Filipinos understood these techniques, they adapted them for their own uses to create better tools, cooking utensils, jewelry and religious ornaments.

People gradually developed agricultural techniques such as wet-rice terraces which are now widespread throughout Southeast Asia. As they grew more comfortable, and as time permitted, they began to create pottery of both utilitarian and ornamental designs, jars for storing goods and burying their dead, and bowls from which to eat. To bury the dead in what is known as a burial jar, people cleaned the bones and sometimes painted them before placing them in a large jar, usually with designs on it and surrounded by items, tools and religious things a dead person might need in the afterlife. These were the first of many elaborate religious rituals concerning the dead and their wandering spirits.

People also probably learned that cotton found on wild cotton trees could be made into thread, dyed and woven into clothing. Typical Filipino wear then and even now in some areas consisted of a patadyon, or sarong, a piece of material one yard long by three yards wide which is wrapped around the waist and reaches to below the knees, much like a skirt.

Languages, too, developed and were gradually replaced by Austronesian languages which are still spoken today. Austronesian languages are a family of languages spoken on various islands. They cover an area which spreads to Madagascar, off Africa's eastern coast, across the Pacific ocean to Hawai'i. Probably these spread to the Philippines as languages of trade between Filipinos and outsiders and gradually became accepted as local languages around the 10th century AD, causing the disappearance of indigenous languages.
Archaeologists have not found much in the way of written documents in any language from pre-historic times, as bamboo and other types of wood upon which records were kept have disintegrated over the years. Records of languages and of trade were kept mostly by the Chinese, and from these, archaeologists must get the bulk of their information. In fact, the only surviving artifact of the written language used before the time of the Spanish in the Philippines is a ceramic jar from the 14th century which has script etched around its neck. This jar was found in Batangas.

Trade was common and on a large scale all over Southeast Asia. Some artifacts illustrating such trade include the Golden Agusan, a small Buddhist statue made from 4 ounces of pure gold and found on the island of Mindanao, and the many Chinese vases from the Ming, Sung and T'ang Dynasties. These vases were immensely popular; they were probably articles of great prestige. Today, usually only pieces of them are found by archaeologists, but these are enough to provide dates and indicate routes of trade.

Filipinos also traveled from as early as 1100 AD. They sailed on boats put together with pegs, going to China to trade for iron and other items. The extensive trading throughout the entire area provides some explanation of why some Filipino traits, customs and religious practices are similar to those of villages in northern Sumatra, or parts of China.

A description of early trade between a Chinese merchant named Chan Ju-Ruatam and the island he called Ma'i which was probably north of Borneo, is as follows:

Chinese traders reached the shore of an island north of Borneo they called Ma'i. They brought porcelain vases, iron, lead and glass beads which they left on the shore and which, at night were picked up by people from the hills. The people disappeared with the goods, not to return until
6-8 months later when they brought back cotton, yellow wax, pearls, tortoise shells and betel nut, a nut which they chewed and which could be compared to present day chewing tobacco, which they left on the shore.

What the Spanish Found

Before the arrival of the Spanish in the late 1500’s, the Philippines was populated by many diverse groups. Some lived permanently in agricultural communities and others traveled nomadically as fishermen, hunters and gatherers, or practiced shifting cultivation, an agricultural technique still used today in which an area of forest is cut down and burned. Dry rice is then planted in the ash-fertilized soil. This soil is good for only one or two years so after that time, the group moves on, leaving the field in a fallow state. They usually return in a few years to repeat the cycle.

Anthropologists have been able to observe some nomadic societies which still practice hunting and gathering or shifting cultivation agriculture to learn more about pre-historic life. The fiercely independent nature of these nomadic people during Spanish colonization and even today has meant that outsiders have not been able to make a great impact on their culture. On the other hand, colonization has resulted in big changes for those people who had established more permanent villages and towns.

Life in the villages best illustrates the culture of the country before the Spanish arrived. It was a well developed society. For example, in the area known today as Manila and which was, in pre-Spanish days, occupied by the Tagalog people, there was almost one hundred percent literacy among
adults. This was reported by the earliest Spanish who came to the Philippines.

The Spanish found people living in villages divided into barangays, or communities consisting of up to 30 extended families, led by a headman called a datu or raja. The datu decided when crops should be planted or harvested, led religious rituals and resolved conflicts between members of his barangay. He was chosen for this task because of his age, wisdom, and religious knowledge.

For these early people, religion played an integral part in daily life and the laws of the society. Rules about marriage, divorce and general behavior such as stealing and lying, were part of the religious doctrine. The timing of important events, such as weddings, planting, and harvesting, the choice of a leader, inheritance of land, and success of the crops were all part of the people's religious understanding, which had to do with an intricate spirit world.

Religion basically involved spirits or anitos which were the dead brought back to earth to watch over people and events. Anitos could dwell in trees, animals, houses, volcanoes, and each anito had a different personality. The most important spirit of the Tagalogs, one of the first groups of indigenous people the Spanish encountered, was Bathala, who existed, to some groups of believers, in the form of a local bird. Bathala was thought to be a protector of the people, who punished wrong-doers and rewarded good. Some anitos were good and others were considered evil, causing poor crops, sickness, loss of wealth and death.

To ward off evil spirits, people carried amulets, small carvings of wood, ivory, or gold to protect themselves. Others tattooed large areas of
their bodies. If evil did occur and a child got sick, for example, a medium would be called. Mediums were women who were believed to have the ability to communicate with the spirits. A medium might smear herself and the sick person with the blood of a pig, then go into a trance to discover what had angered the spirits.

Because some of these spirits were considered to dwell in the land in and around the village, and because this land was so important to the livelihood of the people, the land itself was also seen as deserving a great deal of religious respect. Therefore, land was not owned as we know it now, but was used by individuals who claimed that right. As it was passed down from generation to generation, disputes might erupt over who deserved it, and the outcome was usually decided by the local customs and the datu. In some areas, the women controlled the land and inheritance. In others, it always went to the youngest son.

Harvesting and planting were done according to a lunar calendar and were also the focus of religious rituals. It was thought that if a certain member of the barangay or of a family had committed some wrong, the spirits would punish the entire group, so all behavior, especially concerning specific rituals, was carefully monitored. At certain times, sacrifices of a pig, of jade or gold, of rice and wine were offered to insure a good planting. Rituals were also performed in the event of marriage, childbirth and death.
Social Groups

The barangay was divided into three social groups. The first was the maharlika, or free men, who helped the datu in times of war between neighboring barangays or separate villages. Maharlika did not pay taxes and usually had control over large areas of land, often employing others to help them plant and harvest.

The maharlika often owned alipin, known as dependents who became such by either falling into a great debt, being captured in a raid, or committing a crime which was considered extremely serious by other members of the community. If one's parents were alipin, one would be born into that class. Alipin worked for others but were able to buy their freedom or to marry into the family which owned them. They usually ate meals with that family and so for this and other reasons, were not slaves in the traditional sense.

The group in between, known as timawa, was similar to a working class. They paid taxes, were called to fight in the advent of a war and were free to move to a different barangay if they did not like the laws in their own. The Spanish were greatly confused by this and thought the laws were not strict enough. They also considered the people to be lazy because those they first encountered were not eager to acquire great amounts of wealth, but were happy with only as much gold as they felt they needed for a few ornaments, and enough food to keep them comfortable. The indigenous people did not amass great amounts of wealth just for the sake of owning things. Rather, they had a communal system with regard to property. Social groups, were, for the most part, a way of making sure the society ran smoothly.
The family group was an important unit in society then as it is today. In an agricultural community, each person, young or old, would be assigned certain chores depending on age and health. Usually families lived together in large bamboo huts surrounding the main hut of the datu, clustered together for protection from outside enemies. If there was a lot of land for cultivation the people might be more spread out, but usually they lived with their extended family in one building. In many villages, Filipinos continue to live like this today.

Because their society was well developed, the people had time to create art in the form of pottery, elaborate jewelry, clothing and amulets. The various barangays, were independent groups that took care of all of their members. There was no overall political system knitting the villages into a nation. It was not needed. Although the Spanish considered the people primitive, the village organizations kept order and there was a feeling of prosperity among the people who rarely felt a lack of what was required for their daily life.
MAP EXERCISE—PREHISTORIC PHILIPPINES

Using the map on the following page, locate the following areas in the Philippines:

1. Locate the following sites where prehistoric remains have been found:
   - Tabon Caves
   - Batangas
   - Cagayan
   - Golden Agusan

2. Locate the islands on which these sites were found.

3. Locate the area in which the Tagalog people lived before Spanish colonization.

4. Using the prehistoric map of Southeast Asia on page 78 as a reference, draw arrows from the direction of Taiwan and from Borneo, to indicate possible migration routes into the Philippines, by way of land bridges.

5. Locate the Pacific Ocean and the South China Sea.

6. Fill in the names of as many islands of the Philippine archipelago as you can.

7. Using the map on page 32 as a reference, show areas where Filipinos had been converted to Islam.

1. One example of early trade in Southeast Asia occurred between _______ and the Philippines.

2. Countries in island Southeast Asia are ________, ________, ________, and ________.

3. Colonization of Southeast Asia began in the _____ and ____ centuries and continued as late as the ________.

4. ________ is the time period before foreign influence.

5. The Philippines is an archipelago of about ________ islands.

6. Two important ages concerning the earth's changes and human development are the ____________ age and the ____________ age.

7. During the ________, when the level of the ocean had dropped significantly, the Philippines was a group of large ________, which stretched as far north as ________, also known today as Taiwan.

8. The Tabon Caves are located on the island of ________.

9. BP, which means "before the present," actually means before the year _____.

10. Filipino languages are part of a large family of languages known as the ________ family.

11. The golden ________ is the most famous Buddhist artifact found in the Philippines.
12. People developed ____________ once they felt more comfortable in their environment. At that time, they were also able to spend time producing utilitarian items such as __________ and __________. 

13. Trade with China began in _____ BC. 

14. Fallow swidden is an agricultural technique in which a forest is __________ and __________ and __________ is planted. for 2 or 3 years, after which the land is left in a fallow state so that the group can _________________. 

15. Filipino families live in communities called ______________. 

16. Harvesting and planted were done according to a ______ calendar and involved many _______________. 

17. __________ was the most important anito or spirit of the Tagalogs. 

18. The Spanish thought the indigenous people were lazy because they did not ________________ and because if a man did not like his barangay, he could ________________ ___________. 

19. In the past, Filipinos tended to live with their ______________ as they often do today. 

20. When a child got sick, a __________ was called to address the spirits and find out the cause of the sickness.
GENERAL QUESTIONS

1. Name the three social groups of the Tagalogs:
   __________________, __________________, __________________

2. Three things Filipinos did to ward off evil spirits:
   __________________, __________________, __________________

3. Briefly describe 2 aspects of how Southeast Asian countries changed during colonization and trade: (1) __________________
   __________________
   (2) __________________
   __________________

4. Name three major world religions: __________________
   __________________ and __________________

5. Proselytize means: __________________

6. The 5 countries of mainland Southeast Asia are: ____________,
   ____________, ____________, ____________, ____________.

7. Three problems in studying pre-history in the Philippines:
   (1) __________________
   (2) __________________
   (3) __________________
8. State three aspects of the role of the datu in prehistoric societies:
   (1) 
   (2) 
   (3) 

9. Three steps in forging iron are:
   (1) 
   (2) 
   (3) 

10. The people of the Philippines developed their culture, religion and technology over a long period of time. Tabon man learned to make simple flake tools from river pebbles and later developed rituals for caring for their dead. Give three examples of developments which occurred when people moved to the savannas of the Cagayan River Valley:
    (1) 
    (2) 
    (3)

-66-
Over a period of history, four world religions came to Southeast Asia. Both Hinduism and Buddhism originated in India, while Islam arrived from the Middle East, via India. Christianity was spread through the efforts of missionaries from Europe and the United States and has been most influential in the Philippines where it was proselytized by means of mass baptisms during the late 1500's, an early time period when Islam was just taking hold in Indonesia and the southern part of the Philippines. Some aspects of these world religions are quite complex and foreign to people with other beliefs, and so brief descriptions, focusing on the social historical, and spiritual significance of the religions have been provided below. The social changes, perhaps even more than the spiritual, are what have most notably affected Southeast Asian countries. Conversely, it is often spiritual differences between religions which lead to misunderstandings between groups of people who have various beliefs concerning lifestyle, for example, or what happens after death.

**Buddhism**

There are two major types of Buddhism found in Southeast Asia. Mahayana which is more mystical, involves the belief in Bodhisatvas, or localized deities which are worshipped and thought to help with healing the sick, the growing of rice, and in other aspects of everyday life. Theravada Buddhism, on the other hand, is thought to be a more pure form with emphasis on meditation and discipline away from the material world and towards higher level of consciousness. The most serious Buddhists practice meditation to release themselves from the material needs of this world. If they are successful in letting go of these desires, they will enter Nirvana. This allows them to be released from the wheel of reincarnation which brings people back to life forever. Nirvana is a concept which involves a certain purity of being which is totally void of anything earthly or material, and thus is an idea that many Buddhists take many lifetimes to comprehend and to attain.

Mahayana Buddhists believe that, even though Nirvana can be reached, it is best to choose to return to earth to help others with this difficult path.

Buddhist monks are able to live in temples and practice meditation as well as officiate at ceremonies of marriages and of death because an important part of Buddhism for village people is to make merit by offering rice and money to the village temple.

Common people, who must farm and work and cannot meditate as often as monks do, make merit in various ways. One way is to have a son who becomes a monk. Other ways are simply to follow codes of behavior such as not killing, lying, stealing or drinking alcohol. By following these codes, common people develop kama. Karma is both determined by what good things a person has done, and determines what will happen in the future, depending on what a person has already done. If a person acts in accordance with the codes of behavior, one will be most likely be rewarded with good fortune.
Buddhist monks and those associated with the temples also feel it is their duty to provide help to those who are poor or sick. Much of what is collected in the temple is distributed back among the people who are in need. In this way, Buddhist societies, whether Mahayana or Theravada, take responsibility for their religious leaders or monks and the monks in turn care for the people through religion and distribution of aid among those in need.

Hinduism

Hinduism is concerned with both the spiritual and the social aspects of life. Therefore, one important aspect of this religion is its belief in castes or social groupings into which a person is born.

The highest caste is the Brahmin or aristocrat, the next, the warrior, then comes the merchant, the servant and the peasant-farmer. Below these castes live the "untouchables" who are understood to be impure and live a life of extreme poverty. In the past, Indian society was based on these social strata so that if a person was born into a certain group, it was understood that one had been placed there by the gods. Status could not be changed except by behaving in a way set forth by the gods including meditating and fasting that would improve one's position in the next life. Today, in India, such castes still exist even though aspects of life have changed. For example, some untouchables have become quite wealthy but they are still not allowed to eat at the same table or to touch the food of a member of the Brahmin caste.

Hindus have many ideas of what is pure and impure, which probably originated in times when sickness was frequent and through other religious beliefs. Because the cow provides many necessary parts of the Hindu diet with its dairy products, Hindus are prohibited from eating beef or killing cows unless they are old or sick, and in fact consider the cow to be sacred.

In Hinduism, there are many gods who have control over specific areas of life and ways of being. The gods come to earth in incarnations as humans or animals in order to help those still on earth with the understanding of correct or incorrect behaviour, ways to pray and to understand daily life. Like Buddhists, Hindus also believe that, after a certain point, a person may reach nirvana and will be free of the wheel of eternal rebirth which lasts for millions of years. With these many gods, come numbers of rich religious texts, the most famous of which are the Ramayana and the Mahabharata. These are love stories and tales of heroes who are also depicted in other art forms such as sculpture and painting. While the stories contain a lot of action, romance, and tragedy, their real importance lies in the moral lessons within the plots which are the basis of Hindu religion.
Islam

In comparison with Buddhism and Hinduism, which have existed for thousands of years, Islam is a relatively new religion, which began in the Middle East in the 11th century. This religion began with the teachings and writings of Mohammed who translated and interpreted the thoughts of Allah, the God of Islam. His writings became the Koran, a book which is long and which was written sporadically, as Mohammed received revelations from Allah. Therefore it is difficult to read, and Muslims, those who practice Islam, spend a great portion of their time interpreting and memorizing the words and prayers of this central book.

Orthodox Muslims pray five times a day, facing towards Mecca, the first time being before the sun rises. They are called to the mosque by the chanting of the muezzin. Fasting is also an important part of Islamic life, and is done at certain periods throughout the year. In addition, Muslims try at least once in their lifetimes to make a pilgrimage to Mecca, which is, to Muslims, the most holy place in the world. These and other codes of behavior are outlined in the 5 precepts which are to profess the faith, pray, tithe to help the poor, fast and journey to Mecca, so that Islam is seen to provide codes of conduct which can be very specific and are understood by Muslims to be the word of God as well as the legal system. Islam defines ways men and women can behave in marriage. Men may have more than one wife, provided that they can afford to support them. Women must take precautions about their "purity" and not provoke sexual excitation on the part of men, which is why Muslim women often wear veils covering their heads and in some countries, their faces as well. Other laws of Islam include helping the poor and ailing of society and the prohibition of eating pork, as the pig is understood to be impure.

There are many different sects in Islam, such as the Shi'ites who believe that to die fighting for Islam in a "Holy War" will ensure passage to Heaven, and the Sufists who are more mystical and believe strongly in peace. While non-Muslims often hear about the violent aspects of the more fundamentalist Islamic sects, most Muslims follow the codes of the Koran and regard peace as highly important.

A majority of Muslims believe that Western values, including many held in the United States can have negative influences on Muslim people. For this reason, many fundamentalist Muslims speak out against the United States, and Europe for both religious and political reasons. In fact, fighting between Muslim and Christian countries has occurred off and on since the emergence of Islam. Today, many problems which arise between Muslim groups and others have to do with age-old misunderstandings and stereotypes on the part of both sides of these struggles.

-69-
Christianity developed as an alternative to both Judaism and the indigenous religions of Rome. Jesus of Nazareth, the earliest spokesman for Christians, developed a following in the first 25-30 years A.D., before he was crucified by the Romans. Christians believe that Jesus rose from the dead a week later and ascended into Heaven to show his followers and others the true power of God, his father. In his short life on earth, Jesus encouraged the masses to act against the established order and spread a Gospel which revolved around loving one's neighbor and one's enemies and passing knowledge of this love of God to all others.

One important aspect of being a Christian is to spread these beliefs or to proselytize their religion all over the world. Therefore, in the most remote places, missionaries can be found with the conviction that those who have beliefs other than Christian will burn in hell if they do not embrace Christianity. Early missionaries moved from Rome throughout Europe and into Africa. Later, in the 14th and 15th centuries, Catholic Priests accompanied Portuguese and Spanish explorers to the North and South America and South-east Asia.

The teachings of Jesus were written in the Bible, as they became the Gospel for all Christians, but various interpretations have lead Christians to divide into 3 major groups: Catholicism, in which the Pope at the Vatican in Rome is has the final say in his canonical authority (the beliefs and laws of the church) which extends from Rome to every Catholic church throughout the world, Eastern Orthodox, found mainly in Greece and Eastern Europe and Protestantism.

Protestantism developed out of the Reformation in the 1500's, a movement which wanted more personal and liberal interpretations of the Bible. Thinkers like Martin Luther and John Calvin called for a more literal interpretation of concepts involving morality and loving one's neighbor, rather than Catholic faith which was mandated by the Pope. After the Reformation, Protestant churches had unity on a national level, rather than world-wide. Later, other Protestant Churches called free churches including Lutheran, Methodist, Baptist and Congregationalist emerged each with their own variations on Biblical interpretation.

Catholicism and Protestantism differ in that the former is considered to be more mystical and places firm belief in miracles, Mary's immaculate conception of Jesus and the holiness of certain places and things. Protestants share the practice of baptism with Catholics, that is, the dipping in or sprinkling of holy water at the time when one declares his/her beliefs, or at birth, as well as the existence of heaven, hell and satan. The importance of avoiding those sins outlined in the Bible and one's role in the community are also central for all Christians.
MULTIPLE CHOICE QUESTIONS ON WORLD RELIGIONS

(circle either Buddhism, Hinduism or Islam, or Christianity, whichever applies most to the statement.)

1. Fasting is an important part of this faith.
   B   H   I   C

2. Martin Luther and John Calvin are important thinkers in the history of
   B   H   I   C

3. Karma is an important part of these faiths:
   B   H   I   C

4. Has codes of behavior against lying, stealing, and drinking alcohol.
   B   H   I   C

5. This religion developed as an attempt to reform Judaism.
   B   H   I   C

6. The Pope at the Vatican has canonical authority in
   B   H   I   C

7. These people consider the cow sacred and do not eat beef.
   B   H   I   C

8. Has some sects which believe modern technology is evil.
   B   H   I   C

9. Has as religious texts the stories of the Ramayana and the Mahabharata.
   B   H   I   C

10. These monks are cared for by offerings from the people.
    B   H   I   C

11. People who practice this religion do not eat pork.
    B   H   I   C

12. Members of this religion believe that people who do not follow it
    will go to hell.
    B   H   I   C

13. Has some sects which believe to die fighting for this religion is to
    go to Heaven.
    B   H   I   C
QUESTIONS ON WORLD RELIGIONS—(cont.)

14. Is based on "making merit" by offering a son to become a monk.
   B   H   I   C

15. These two religions have as their belief that people have more than
    one life.
   B   H   I   C

16. Men in this religion are allowed to have more than one wife.
   B   H   I   C

17. This religion involves baptising
   B   H   I   C

18. This religion involves proselyzing.
   B   H   I   C

19. This religion is based on the writings of the Koran.
   B   H   I   C

20. Members of this religion would like to be released from the desire
    for all material things.
   B   H   I   C

21. This religion was developed in the first 25-30 years AD.
   B   H   I   C

22. Members of this religion make a pilgrimage to Mecca.
   B   H   I   C

23. Involves strict social groupings called castes.
   B   H   I   C

24. Members of this religion are called to pray by the muzzein.
   B   H   I   C

25. Members of this religion believe in the wheel of eternal rebirth.
   B   H   I   C

FILL IN THE BLANKS

1. One example of early trade in Southeast Asia occurred between China and the Philippines.
2. Countries in island Southeast Asia are Malaysia, Indonesia, and the Philippines.
3. Colonization of Southeast Asia began in the 14th and 15th centuries and continued as late as the 1960's.
4. Pre-history is the time period before foreign influence.
5. The Philippines is an archipelago of about 7000 islands.
6. Two important ages concerning the earth's changes and human development are the Ice Age and the Pleistocene Age.
7. During the Ice Age, when the level of the ocean had dropped significantly, the Philippines was a group of large land masses which stretched as far north as Formosa, also known today as Taiwan.
8. The Tabon Caves are located on the island of Palawan.
9. BP, which means "before the present," actually means before the year 1950.
10. Filipino languages are part of a large family of languages known as the Austronesian family.
11. The Golden Agusan is the most famous Buddhist artifact found in the Philippines.
12. People developed agriculture once they felt more comfortable in their environment. At that time, they were also able to spend time producing utilitarian items such as clothing and pottery.
13. Trade with China began in 1000 BC.
14. Fallow swidden is an agricultural technique in which a forest is burned and out and rice is planted for 2 or 3 years, after which the field is left in a fallow state so that the group can move on and return later to repeat the cycle.
15. Filipino families live in communities called barangays.
16. Harvesting and planting were done according to a lunar calendar and involved many sacrifices.
17. Bathala was the one of the most important anitos or spirits of the Tagalogs.
18. The Spanish thought the people were lazy because they did not amass great amounts of wealth and because if a man did not like his barangay, he could move.
19. In the past, Filipinos tended to live with their extended families as they often do today.
20. When a child got sick, a medium was called to address the spirits and find out the cause of the sickness.
GENERAL QUESTIONS

1. Name the three social groups of the Tagalogs: timawa, maharika, alipin

2. Three things Filipinos did to ward off evil spirits: tattoo, amulets, sacrifices, rituals, anitos

3. Briefly describe 2 aspects of how Southeast Asian countries changed during colonization and trade: (1) proselytizing a world religion (2) economics, they wanted to get more products, gold, spices,

4. Name three major world religions of: Hinduism and Islam

5. Proselytize means: to try and convert others to one's religion

6. The 5 countries of mainland Southeast Asia are: Cambodia, Laos, Thailand, Burma, Vietnam

7. Three problems in studying pre-history in the Philippines:
   (1) religious objects were destroyed by Spanish
   (2) wood, bark, bamboo materials decomposed over time or burned
   (3) objects were in places that are now covered by water

8. State three aspects of the role of the datu in prehistoric societies:
   (1) he decided when planting and rituals should be held
   (2) he brought together armies to protect his people
   (3) collected taxes in rice to give to poor, presided over ceremonies

Three steps in forging iron are:
heat up in order to shape, shape, quench in cold water to harden

10. The people of the Philippines developed their culture, religion and technology over a long period of time. Tabon man learned to make simple flake tools from river pebbles and later developed rituals for caring for their dead. Give three examples of developments which occurred when people moved to the savannahs of the Cagayan River Valley:
   (1) had enough time to develop agricultural techniques (such as wet and dry rice), and also developed hunting techniques
   (2) could use their time to make clothing, pottery, jewelry, tools, burial jars, etc
   (3) eventually had time to develop a more complex system of writing, government, religion, trade, social groups, etc
   (any of these will do as answers)

CHAPTER 3: EUROPEAN COLONIZATION PERIOD IN SOUTHEAST ASIA

Introduction

The idea of Southeast Asia as a geographical region can be problematical in some ways. The ten countries of this region, Burma, Thailand, Laos, Cambodia, Vietnam, known as Mainland Southeast Asia and Indonesia, the Philippines, Singapore, Malaysia and Brunei known, as Island Southeast Asia are all separate and unique countries, with varying religions, cultures, languages and governmental systems.

The geography of these countries, their borders, in some instances their capitals and interior divisions were, in a large part, created by their European colonists. All the Southeast Asian countries, except Thailand, experienced European colonization. Colonization, by the Spanish and the Americans in the Philippines, the Dutch in Indonesia, the British in Burma and Malaysia (which at that time included Singapore and Brunei) and the French in the area known then as Indochina, or Cambodia, Laos and Vietnam, occurred over the period from the late 16th century to the middle of the 20th century. Not only did the colonial powers create new borders to serve their needs for organizing local laborers and trade but they also left their marks on the people, the governmental structure, educational systems, religion, and language.

Colonization began with the Portuguese who paved the way for other Europeans. Portuguese maritime traders sailed into a vast area, including India, China, and Southeast Asia, and their exploits were soon followed by their European neighbors who vied for power throughout the area, at the expense of the local people. Natural resources, such as gold in the Philippines, spices, coffee and tea in Indonesia and Burma, various minerals and later, rubber from plantations, were the exports the traders desired for expanding markets back in Europe.

In the Philippines, the first Spanish settlers were Christian missionaries who saw it as their mission to convert the people to Christianity. At first they did this by having mass baptisms in which Filipinos became Catholics without even knowing what it meant. The Philippines was perhaps most affected by the religious aspect of colonization since the Spanish friars were so adamant about the conversions at such an early date (the late 1500s.) These missionaries accompanied explorers who had economic priorities as well, since this archipelago was also rich in natural resources.

Other countries had to submit to the force of the European rule, but did not change their religious beliefs on as large a scale as the Philippines mainly because these countries already had well-established and wide-spread religions such as Islam. While Islam had already begun to take root in the southern Philippines when the Spanish arrived, most early Filipinos practiced indigenous localized religions which were soon overshadowed by Spanish Catholicism.

Because the Philippines experienced the longest period of European colonization, and because religion conversion was so great, the Filipinos have had unique problems in coming to terms with their identity as a people.

One major characteristic of the contemporary Philippines which is shared by other Southeast Asian countries, is the presence of what are known as ethnic or cultural minorities, or hill tribes. These people, who still practice traditional religions were less affected by European colonization but now have difficulty maintaining their way of life because their land is in high demand and because, in maintaining their distance from organized government, they often lose their rights as citizens.
1. Locate the countries of Southeast Asia with the help of an atlas.

2. Locate capital cities of today. (Indicated by dots on the map)

3. Indicate which countries were colonized by which European groups.

4. Which was the only country that has continued to follow the religion brought by its European colonizers?
Arrival of the Spanish in the Philippines

The Spanish tried eight times in the 1500's to establish a settlement in the Philippines before Miguel Lopez de Legazpi succeeded in 1565, against such odds as malaria, scurvy, starvation of his sailors and opposition from the inhabitants of the islands. Legazpi sailed from Mexico which was already a Spanish colony, following maps provided by Ferdinand Magellan.

On March 17, 1521, on their circumnavigation of the globe, Magellan and his men sighted what is now the island of Samar and landed on the islet of Homonhon where the people offered them food and drink. They later sailed to Limasawa, an island south of Leyte, where Magellan performed the first Catholic mass.

Proceeding to Cebu, Magellan "converted" Raja Humabon, the headman of the island and his subjects as well as 800 of the island's inhabitants to Christianity. At the same time, he presented the Raja with a wooden statue of the Christ child or Santo Nino, a popular religious icon still revered in the Philippines today. Two months later, Magellan was killed on the neighboring island of Mactan by the men of local chieftain Lapu-Lapu when he tried to force trade and Christianity on the people of that island by burning down their villages.

The Route to Manila

When Legazpi landed in Cebu, he found the statue of the Santo Nino left by Magellan and took this as a blessing. On April 21, 1565, he established the first Catholic church in the Philippines in what is now Cebu City and settled there with his crew. By June, however, he was forced to leave due to a lack of supplies and continued attacks by the Portuguese who were also in
the process of trying to establish colonies in Southeast Asia. After leaving Cabu, Legazpi then moved northward to the island of Luzon.

Manila, (then called Maynilad), was already an established port city inhabited by the Tagalogs (pronounced Tah gah'log). Manila is located in a strategic area. To the west it overlooks a bay which leads out to the ocean and to the east, the Pasig river which runs into the interior of Luzon. The area was ideal for trade and fortification against external attacks.

The Tagalogs, who were already leery of the Spanish galleons and their cannons, burned their city and fled to the swampy lowlands surrounding the river and beyond as soon as they saw Legazpi's galleons approaching. Upon landing, Legazpi claimed the city and the whole archipelago for Spain. He named it Filipinas (sometimes spelled as Felipinas), after the reigning monarch of Spain, King Felipe (Phillip) II. The name was later anglicized to "the Philippines."

The First Missionaries

The first Catholic missionaries arrived on Legazpi's ship—four Augustinian monks or "friars," who immediately set out to answer their call from God and begin the business of converting the indigenous people to Christianity. In settling the islands, the Spaniards had two goals: the first was financial, and was aimed at establishing trade in spices. However, upon realizing there were no spices to be exported from the Philippines, the archipelago became a stopover for trade between Mexico and China. The second, was a spiritual goal, which was to make converts throughout the islands as they had in Mexico and South America.

Establishing colonies and trade centers in Asia and the "New World"
(meaning North and South America) was a way for already wealthy European
countries to bring in revenue, expand their spheres of influence and acquire
more overseas territories. The Christian religion, an integral part of the
Spanish way of life, was also an important philosophy under which the monks
acquired vast tracts of land. Using religious dogma they were able to
convince the indigenous people, whom they considered uncivilized and in need
of guidance, to work for them.

Although the monks themselves did not get rich they built up the wealth
of the church of Spain and, in turn, of the Spanish Empire. With colonies in
Cuba, Mexico, South America, and on the coast of California, Spain amassed
great wealth through gold and other resources found in these colonies. King
Phillip II is said to have boasted that the sun never set on the Spanish
Empire.

The Spanish monks let nothing stand in the way of their conversions of
Filipinos to the Catholic faith. They believed that teaching Christian values
was their main mission on earth. Disregarding local culture, the monks and
other Spaniards radically changed the social, political and religious struc-
ture of the indigenous people's lives.

As a result, Filipino culture was drastically altered, so that regular
aspects of life were declared to be sins against Christianity or simply
illegal. At the same time, Filipinos were not allowed to assimilate them-
selves into Spanish culture by raising their status in the Spanish church or
Spanish community. Instead, Filipinos were caught in between these two worlds
and found it difficult to join together to fight against their oppressors.
This difficulty was magnified by the fact that they were separated not only
physically, on different islands, but into various groups with separate
languages and cultures when the Spanish arrived. Although the people of the Philippines were unable to join together to overcome Spanish colonization until 1896, there were many examples of uprisings throughout the archipelago which had to be suppressed through extreme means. Some examples of these period revolts are described in the Chronology on page 98.

A Look at the Pre-Hispanic Culture

The Tagalogs, who lived in and around Manila, were one of many groups of Filipinos who had their own written language and a high rate of literacy as well as elaborate religious practices involving sacrifices, intricate gold jewelry and statues of wood, gold and other materials.

Before the Spanish Conquest, many indigenous people lived in barangays or moderate to large groups of families led by a datu or headman. While trade between outsiders such as China and the barangays of the Tagalogs and other individual groups throughout the Philippines was frequent, there was no unifying political structure across the Philippine archipelago. The barangays were self-sufficient clusters in which the inhabitants spoke their own languages and practiced often similar, but in many many cases, different customs.

The form of religion in the early barangays was known as animism or polytheism. People believed in many gods at once dwelling in trees, houses, volcanos, crocodiles, birds, the sun and the moon. The Tagalogs called these gods or spirits anitos. At planting time or after natural disasters such as earthquakes or typhoons, people made sacrifices of pigs, rice, wine and jewelry. To ward off evil spirits in everyday life, they wore amulets made of coral, jade and bone.

The datu was in charge of religious ceremonies and crop planting, as well
as anti-social behavior of the village people which might anger the spirits and affect the entire community. In death, great care was taken to prepare the body for the spirit world. In some places, bones were carefully taken apart, washed and placed in burial jars. Archaeologists digging in the Philippines are convinced that there was a sophisticated material and spiritual culture among the pre-Spanish people. Under their system, everyone was cared for.

Individual families were the basic units of these communities. Men and women, were assigned different chores, but were equally important as members of society. Women often made major decisions about the way the community was run. When the work was done, there was adequate time to develop great traditions of pottery and jewelry-making as well as wood carving and other arts.

The Spanish missionaries considered these cultural systems and beliefs the worshipping of the devil and thought the people were "pagans" or "heathens" who needed to be saved from "eternal damnation." Because Catholicism stated that there was a correct way of life and any deviations from this were evil, the Spanish set about changing all local belief systems to fit their own. The Tagalogs thought that there were many forms of good and evil and many kinds of beliefs, which is why they accepted Christianity as just another part of their cosmology, not as the only religion of the people.

Spanish monks baptized the people in great numbers. First, instruction in religious doctrine was given in the Tagalog or other local languages at the simple level which the the friars had managed to learn. The people were made to repeat prayers such as Hail Mary and Our Father, and had to memorize sections of the Bible or prayer books and to confess their sins. Finally they were anointed with holy water and given Christian names. A great feast would
take place with much rice and fish. In the first 60 years, over 600,000 people were baptized. The meaning of baptism was most likely lost on the first generations of Filipinos, who complied with the Spanish out of either curiosity or hospitality to strangers, or because they were forced to do so.

The Friars' Determination

The friars worked hard to make new converts. After the first Spanish ship more ships arrived carrying representations of different Catholic orders including Jesuits, Franciscans, Dominicans, and Recollects. By 1598, the country was divided into religious zones so that each order had its share of land and potential converts.

First the friars would learn the language of the people and impress upon them the concepts of heaven and hell in that language. One story describes a friar who had his helper light a fire behind him at the precise moment he spoke about hell to emphasize his point. Frightening the people into converting was one popular method.

Next, the friars learned as much as they could about the indigenous religions in order to prove them wrong. In one area, there was an active volcano wherein, the people believed, the dead entered, were transformed and spit back out in the lava as someone or something else. According to an old diary, one monk, along with only one brave potential convert, climbed up the steep incline to see first hand what was actually inside the cone.

Although the people were baptized, they continued to offer sacrifices. Frequently, when the monks' attempts at conversion failed to put a stop to this, they would beat the people with bamboo sticks, smash their altars and force them to confess their sins.
These measures were not always necessary. Because the friars had some advanced knowledge of fighting diseases, especially those which occurred in children, the people considered the holy water for baptism to have special healing properties. In times of epidemics or when their children were sick, people flocked to the churches to have themselves and their children baptized.

Adapting to a New Way of Life

Despite the efforts of the friars the people continued to believe in their own gods and spirits along with Catholicism. What emerged was a system known as "Folk Catholicism", or a specifically Filipino form of Christianity which blended beliefs of both Catholicism and spirit worship. Mystical beliefs, like those concerning the holy water mentioned above were appealing to Filipinos because they coincided with pre-Catholic beliefs about the healing properties of certain substances. Another example of this is found today in the festival of the Santo Nino where Filipinos take a sculpture of the Christ child, bathe it, dress it and take it down to the ocean in hopes the devotion will bring good luck, rain, or a child. Having sculptures of saints in the house or carrying them in the pocket like an amulet are other examples of Folk Catholicism.

In order to organize the people, for better control and convenience, the friars rearranged the society into village settlements governed by Spanish encomenderos or soldiers of fortune who forcefully took control, then policed an area so that the friars could begin their religious activities. The encomenderos demanded tribute, taxes and forced labor, in exchange for religious teachings and protection of the people against hardship. This system was never agreed to by the Filipinos, but it soon became a way of life. Mean-
while, the encomenderos collected gold and treasures to increase their own personal wealth. Many of the civil servants who came to the Philippines throughout the Spanish colonial era were born and died in Spain but came to the Philippines for this very reason.

In the center of a typical settlement stood the mission, a large estate with a monastery and church-owned lands for crops and livestock. Local people were assigned work in and for the church on these estates, which were similar to missions built on the coast of California. They had to be specially designed not only in the materials available in the Philippines (where houses had always been built from bamboo), but to withstand earthquakes. In erecting these government buildings the Spanish created a new architectural style in the Philippines of large estates involving the use of stone which became known as the colonial style.

Although the people appeared to follow the Spanish way of life, they never really gave in to the system imposed upon them. Missionaries were unable to settle or establish churches in the southern islands of the Sulu Archipelago which were inhabited by independent fishermen, farmers, and their families who had already been converted to Islam. In the mountains of Northern Luzon, hill tribes such as the Ifugao and Kankanai, known to be headhunters, also retained their freedom because of their inaccessible location, and the abundance of malarial mosquitoes in the area. Friars who attempted to make conversions in these areas and died were thought of as martyrs by other friars. Due to the size of the country, its separation into islands and the many other deterrents to friars and conquistadors, large areas were never seen by the Spanish who mostly concentrated themselves along shorelines, in urban centers, and in inland spots which were more accessible.
The Revolution Against the Spanish

By 1872, the Filipinos realized that even those most loyal to the Spanish would never be able to do more than clerical work for the church. Positions for priests were only given to individuals of Spanish blood. In addition to this, the Spanish Empire was beginning to crumble. Mexico had fought successfully for its freedom and Cuba, another Spanish colony, was also fighting to win back its territory. Spain had already suffered great financial losses to the Dutch and British who had repeatedly attacked Manila. Desperately in need of money, the Spanish raised taxes and forced the Filipinos to work more for lower wages.

Revolution against the Spanish began in earnest when three Filipino Catholic priests, Burgos, Gomez and Zamora, were publicly executed because they called for more equality within the church. Angered by their deaths, the people began to gather in uprisings and agitate for reforms throughout the archipelago. Although sporadic rebellions had occurred throughout Spanish rule, these marked the beginning of a more united front against Spanish domination.

Filipinos gradually split into two groups: reformists, who felt that Spanish rule could be changed to better accommodate Filipinos, and revolutionaries who wanted an end to Spanish rule altogether. One noted reformist was José Rizal, a Chinese mestizo who had studied in Europe and wrote two novels which spoke out against Spanish rule. Rizal was part of a group known as ilustrados, educated and wealthy Filipinos who were of mixed Chinese-Filipino or Spanish-Filipino ancestry. In the 1880s, it was the ilustrados who called for reforms and encouraged Filipinos to assimilate themselves into the Spanish government and culture. However, as they pressed for more reforms, the
Spanish retaliated by continued exclusion of Filipinos from government positions and participation in Spanish society.

The hope of cooperation with the Spanish was abandoned due to such practices as charging higher taxes and publishing newspaper cartoons depicting Filipinos as ignorant and lazy. Filipinos no longer believed that they were inferior to their colonizers—not as intelligent nor as industrious. As revolutionaries, such as Andres Bonifacio, began to receive more popular support the ilustrados abandoned their ideas of reforms and joined them.

Andres Bonifacio was a man of the masses who started the Katipunan, a secret society advocating the overthrow of Spanish rule. Because he was not an ilustrado he had a better opportunity to unite the majority of common people. The ilustrados, at that time, did not respect his lower social status, his lack of education, and his military capabilities. Today, however, Bonifacio is considered a national hero and the members of the Katipunan are remembered for their bravery in fighting the Spanish and later the Americans. During the fighting with the Americans in 1897 Bonifacio was killed by an ilustrado named Emilio Aguinaldo.

Another ilustrado, Aguinaldo became prominent as a reformer-turned-revolutionary and Filipino unity against the Spanish increased. As Rizal himself had predicted once the Spanish created martyrs by killing popular Filipino leaders, there would be no way to stop the struggle for independence. However, even at this early date in history, opposition groups of Filipinos vied for power in the archipelago. As seen by the eventual confrontation between Bonifacio and Aguinaldo, this split was between the wealthier, educated Filipinos and those from rural-peasant backgrounds.
Meanwhile, the Spanish deported José Rizal, whose writings had reached a large group of people even though his stance was moderate, to Mindanao. Rizal spent four years in jail for treason and was eventually executed by the Spanish on December 30, 1896. This action started a reign of terror, where the Spanish executed anyone who could be considered a revolutionary and sent many Filipinos to a Spanish penal colony in Africa.

While the United States did step in and help defeat the Spanish in the Spanish-American War, there was little chance the Spanish could have continued to dominate the people of this archipelago. Filipinos had understood for some time that the Spanish came to the islands for ulterior motives, but it was only in the late 1800s that they developed enough unity and power to take a stand against their oppressors.

The departure of the Spanish did not bring Philippine independence, however. Instead, the Philippines was annexed by another colonial power, the United States, which would stay for almost the next fifty years. During this period, Filipinos were given some limited freedom to develop a government of their own, but the Philippines was not to become an independent nation until 1946. Given the changes which occurred from 1521-1946, one wonders what might have happened if the Philippines had been able to develop gradually and naturally as a sovereign nation. Unfortunately, these possibilities will never be known. Today the people of the archipelago are 75% Roman Catholic and have a mixture of Malay, Spanish, Filipino, Chinese, and American cultures and values.
1. Show a possible route, including stopovers, of Magellan's last trip to the Philippines, ending in Mactan.

2. Locate area where Legazpi found the Santo Nino.

3. Show Legazpi's route from his initial discovery of the Santa Nino to his final destination.

4. Using the map on pg. 78 and the text as references, show the general area of the Ifugao and Kankanai people, who maintained their traditional religion and were not converted to Christianity.

5. Show areas where Christian converts were not made because the people in the area had already been converted to Islam.

6. Locate island and bay where José Rizal was jailed for treason by the Spanish.

7. Explain why you think Manila was chosen as the trade center by the Spanish:

(note: if atlases are not available for use, maps are provided on page 113 and 114 of this section.)
The Philippines During Spanish Colonization
# GLOSSARY

<tr>
<td>Santo Nino</td>
<td>wooden statue of the Christ child; festival where the statue is undressed and washed in the river to bring good luck with rain and health</td>
</tr>
<tr>
<td>scurvy</td>
<td>a disease of general infirmity due to a lack of vitamin C found in fruits and vegetables</td>
</tr>
<tr>
<td>IMPORTANT NAMES</td>
<td></td>
</tr>
<tr>
<td>-----------------</td>
<td></td>
</tr>
<tr>
<td><strong>Emilio Aguinaldo</strong></td>
<td>an ilustrado who was responsible for some uprisings against the Spanish but who wished the Spanish to allow Filipinos to be assimilated into their government; Headed the first independent Philippine Republic after the Spanish-American war, but this was soon subjugated by the United States; hailed by the American colonizers as the hero of the revolution, because of his more moderate stance.</td>
</tr>
<tr>
<td><strong>Andres Bonifacio</strong></td>
<td>revolutionary Filipino leader from the lower classes who lead the secret society called Katipunan and was instrumental in involving the lower classes in many nationalist uprisings against the Spanish; was eventually assassinated by Aguinaldo's forces. Although Bonifacio was not respected by the ilustrados because of his lack of education and low social status, he is now considered to be the hero of the Philippines revolution. His new popularity in the Philippines comes after years of his reputation being tarnished by American colonists who found his radical methods and nationalism to be a threat.</td>
</tr>
<tr>
<td><strong>King Philip II</strong></td>
<td>king of Spain when the Philippines was first settled; the Philippines named after him; reigned from 1556-1598</td>
</tr>
<tr>
<td><strong>Ifugao and Kankanai</strong></td>
<td>two groups of hill people who live in Northern Luzon; practice wet rice terracing for agriculture and have wood-carving traditions; avoided colonization by the Spanish because of their practice of headhunting, a way for men to prove themselves by capturing the head of any stranger in the area or from neighboring villages</td>
</tr>
<tr>
<td><strong>Lapu-Lapu</strong></td>
<td>local chieftain of Mactan whose men killed Ferdinand Magellan</td>
</tr>
</tbody>
</table>
Manuel Lopez de Legazpi a conquistador who led the first successful colonial expedition to the Philippines in which he and his crew of Spaniards ultimately settled in Manila.

Ferdinand Magellan Portuguese explorer; first European to land in the Philippines.

Manila from the indigenous word "Maynilad", shortened to Maynila, from may 'there exists' and nilad, the name of a flowery shrub, adapted to marshy conditions, which grew abundantly along the banks of the Pasig river, adjacent to the city.

Jose Rizal An ilustrado of Chinese-mestizo background, he greatly influenced the Philippine struggle against Spain, largely through his writings. Educated in Europe and able to travel, Rizal was part of a group of Filipinos who met many Europeans who did not agree with Spanish colonialism. These Filipinos gained popularity in Spain, studied the French Revolution and published magazines speaking out against the Spanish. Rizal wrote two famous novels: Noli Me Tangere and El Filibusterismo which describe Spanish rule in the Philippines. Rizal was jailed a number of times before being executed on December 30, 1896.

Friar Domingo de Salazar first Jesuit Priest to arrive in Philippines; appointed Bishop of the archipelago.

Sulu Archipelago a group of islands in the southernmost part of the Philippines inhabited by groups of fishermen, including the Bajau, the Tausug and the Samal, all of whom practice Islam.

Tagalogs indigenous people occupying Manila and surrounding areas when the Spanish arrived.

FILL IN THE BLANKS

1. The belief in more than one god at once is known as ______________.

2. _______ and _______ were the first islands settled by the Spaniards.

3. While the Spanish wanted the Philippines to be a trade center, they more importantly wanted to ________ the people to ____________.

4. Magellan was killed on the island of ____________.

5. ________________ were Spanish who collected tributes from the local people in return for ________________ and Catholic teachings.

6. Magellan presented the people of Cebu with a wooden statue of the ______ ________.

7. The people of the ________________ in the southern Philippines were never colonized by the Spanish as they had already been converted to ________________.

8. ________ was the founder of Manila.

9. Two famous ilustrados were ________________ and ________________.

10. Churches in the Philippines had to be specially designed to withstand ____________.

11. Besides the Philippines, ________________ was also a colony of Spain.
12. ___________ was named after a plant which grew abundantly in the swamplands that surrounded the Pasig river.

13. Spanish rule in the Philippines lasted from ___________ to ___________.

14. The Spanish reacted to Filipino uprisings in the 1880's after Rizal's execution by beginning a ____________________.

15. Spanish galleons were built taller and narrower for better performance in _____________.

16. Luzon is ___________ of Cebu. (direction)

17. We will never know what the Philippines would have been like without the ____________ and ____________ colonizations.

18. When the Spanish found the Filipinos worshipping ____________ and making ____________, they beat them with bamboo.

19. Before the Spanish came, the Filipinos often buried their dead in _____________.

20. _____________ was a famous revolutionary and founder of the Katipunan movement.
GENERAL QUESTIONS FOR FURTHER STUDY
(use outside sources if necessary)

1. The Philippines is an archipelago. Name three other archipelagos:

2. The original religion of the Philippines was "animistic"—
the worship of spirits in animals, things and natural phenomena. The
Spanish brought Catholicism. Name four other major religions:

3. Name two important events in the life of José Rizal which helped
the Filipinos in their revolution against the Spanish:

4. The Santo Nino is worshipped in yearly festivals in the Philippines and
even today is thought to help fishermen, bring fertility and rain. Name
three Catholic saints:

There are at least two holidays we celebrate which resemble Filipino
"Folk Catholicism." One is Halloween, which originated as All Hallows
Eve, the night when spirits gathered before All Saints Day on Nov.1st
Valentine's Day and St. Patrick's Day can also be described as examples of
Folk Catholicism. Choose one of these holidays and briefly describe in
what way it could be understood as Folk Catholicism:
5. The Philippines was a colony of Spain. Of what country was the United States a colony? 

6. Before the Spanish arrived, Filipinos exported cotton, gold, betel nut and coral to China. They imported silk, lead, tin and porcelain. Name five things the US imports:

7. Name two Filipinos of today:

8. What is a mestizo?

9. Briefly describe two changes the Spanish made in the Philippines:

10. Describe what you might do if people from another country took over your country, forced you to work for them, pay taxes, earn inadequate wages, convert to their religion, and speak their language; think about other countries or places throughout the world where this has occurred:

GENERAL QUESTIONS
(use outside sources if necessary)

1. The Philippines is an archipelago. Name three other archipelagos:
   Japan, Hawaii, Indonesia, Sulu Archipelago, Marshall Islands, etc.

2. The original religion of the Philippines was known as "animistic"—
   the worship of spirits in animals, things and natural phenomena. The
   Spanish brought Catholicism. Name four other religions or sects:
   Buddhism, Catholicism, Hinduism, Judaism, Islam, Protestantism, etc.

3. Name two important events in the life of José Rizal which helped the
   Filipinos in their revolution against the Spanish:
   studied in Europe, studied the French Revolution, wrote two novels,
   fought for freedom, became a martyr

4. The Santo Nino is worshipped in yearly festivals in the Philippines and
   even today is thought to help fisherman, bring fertility and rain. Name
   three Catholic saints:
   Mark, Luke, Michael, Patrick, Joan, etc.

There are at least two holidays we celebrate which resemble Filipino
"Folk Catholicism." One is Halloween, which originated as All Hallows
Eve, the night when spirits gathered before All Saints Day on Nov.1st,
Valentine's Day and St. Patrick's Day can also be described as examples of
Folk Catholicism. Choose one of these holidays and briefly describe in
what way it could be understood as folk Catholicism:

   any description of the use of the saint's name, his/her ideology
   in a ritual of cards, wearing green, drinking and for Halloween,
   the idea of scaring people, dressing up, superstition, Jack O'Lantern.

5. The Philippines was a colony of Spain. Of what country was the United
   States a colony? England
GENERAL QUESTIONS—(cont.)

6. Before the Spanish arrived, Filipinos exported cotton, gold, betel nut and coral to China. They imported silk, lead, tin and porcelain. Name five things the US imports:

   televisions, oil, cars, stereos, shoes, clothing, food, computers, 
   
   material, wood, vodka, alcohol, cigarettes, books, etc.

7. Name two famous Filipinos of today:

   Ramos, Laurel, ____ Aquino...etc. ____

8. What is a mestizo? ____ a person who is a mixture of Filipino and 
   Chinese or Spanish blood ________

9. Briefly describe two changes the Spanish made in the Philippines:

   community life, social life, politics, religion, work, 
   
   language, churches, architecture, living areas, 
   
   leaders (datus to encomenderos), anitos, amulets, 
   
   land use, government, education, etc.

10. Describe what you might do if people from another country took over 
    your country and forced you to work for them, pay taxes, earn small 
    wages, change to their religion, and speak their language; think about 
    other countries or places throughout the world where this has occurred:

CHAPTER 4: UNITED STATES COLONIZATION OF THE PHILIPPINES

Introduction
American colonization of the Philippines lasted from 1898-1946. Colonization by the U.S. often gets little attention in American history books, yet this period was extremely important in the development of the Philippines. Ties between the countries were so great for the first 50 years of the 1900s that conditions in the Philippines changed dramatically in accordance with who was elected president of the U.S., his party's philosophy, and the U.S. economic situation.

After Spanish colonization ended, Filipinos declared their independence, and confronted U.S. troops, who claimed to come benevolently, with some resistance. This resulted in the Philippine-American War, which the U.S. government played down to the American public, claiming there were only small pockets of resistance, and calling Filipino revolutionary fighters "armed bandits." This was the first time U.S. troops encountered guerilla warfare of the same type they faced years later in Vietnam and Latin America.

The U.S. had many goals in their colonization, both paternal and philanthropic. They brought in education, health care, new technologies and American-style democracy to the people, however, at the same time, this colonization bolstered the American economy at the expense of the Filipinos in that an abundance of American goods were sold to Filipinos, U.S. military bases were set up for monitoring the Asia and Pacific, and American investors set up large plantations, factories and mining operations in the Philippines.

When the U.S. annexed the Philippines, they started schools and began to develop a new government and economy. Gradually, this became a situation of economic dependence for the Philippines. A system of free-trade developed between the two countries in which Philippine exports could enter the U.S. with- out being subject to import tariffs. This was helpful at first to maintain growth in the Philippines but eventually benefitted only that small elite group of Filipinos who owned land and the many Americans who had started corporations or had investments in the Philippines, which depended upon low-cost Filipino labor. Therefore, due mostly to the special interests of these groups, Philippine independence was slow in coming.

Economic policies concerning capitalism, investments and the competitive market became the policies of Filipino investors and businessmen, creating a larger and larger rift between the wealthy elite and the tenant farmers, factory workers and other laborers. As the Chronology on page 138 shows, there were frequent uprisings throughout this period which were usually short-lived and bloody. Uprisings often stemmed from "secret societies" led by individuals considered to be "messiahs." This meant that once the leader was killed or jailed the secret society would usually break apart and no progress would be achieved. Other Filipinos chose to follow the beliefs of the Communist Party rather than the democracy offered by the Americans.

The depression of the 1930s and the plight of American farmers who had to compete with low-cost grains and rice from the Philippines, were major reasons behind the decision to grant the Philippines its independence. Thus American goals of creating a "showcase of democracy" in the Philippines were never realized, but the remnants of 50 years of American rule are still quite obvious. American products and styles became status symbols, and knowing English became a ticket to success for Filipinos. It is only recently that Tagalog has replaced English as the national language, and that the people have begun to reexamine their culture seeking what is truly Filipino.

-115-
The Spanish-American War and its Aftermath

The American colonization of the Philippines was quite different from that of the Spanish, but there was one overwhelming similarity: both the Spanish and the Americans thought they knew what was best for the Filipino people and used force to implement their ideas.

While the Spanish considered Catholicism to be of the utmost importance in their colonization, the Americans were anxious to impose their form of government—democracy—on the people. Just as the Spanish saw Catholicism as a way of saving the Filipino people from themselves, the Americans thought democracy would provide a way of living and governing that would improve life in the Philippines. While the Americans were careful to separate church from state in what is known as a secular form of government, Americans were just as dogmatic about their policy as the Spanish had been about theirs.

The Spanish-American War began in 1898 when a United States warship, the U.S.S. Maine, was blown up in Havana Harbor in Cuba. The United States had been helping Cuba in its revolution for independence against Spain, and continued naval attacks against Spain, in Manila Harbor, in the Philippines.

Commander George Dewey, the American who lead the attacks, later became known to Americans as the "hero of Manila" although it is commonly believed that, by the time Dewey fought the Spanish in Manila harbor, a deal had already been made between the U.S. and Spain in which Spain "sold" the Philippines to the U.S.. The battle which occurred in Manila harbor, therefore is now referred to as a "mock battle," which was carried out to convince the Filipinos that the Americans had saved them from the Spanish.

Although the Filipinos had fought successfully against their Spanish colonizers and had declared themselves independent on July, 12, 1898, the
Treaty of Paris between Spain and the U.S. was signed on December 10, 1898. Under the terms of the treaty, the United States paid Spain $20,000,000 for war reparations and received from Spain: Cuba, Guam, Puerto Rico and the Philippines, all of which became U.S. colonies.

The United States president, William McKinley, realized right away what an asset the Philippines could be for the U.S. The archipelago was a good strategic location for an American presence in Asia and for military control over the Pacific. At the same time, the islands had abundant raw materials that could be mined and timber to cut, as well as fertile land in which rice and sugar cane could be grown.

The Philippine-American War
Emilio Aguinaldo, an ilustrado, had lead the fighting against the Spanish along with another revolutionary leader, Andres Bonifacio. Aguinaldo communicated with the Americans, who at first assured him that they did not intend to colonize the Philippines. After Aguinaldo declared independence for the Philippines he had Bonifacio assasinated to insure his own power over the country and he began to incorporate a government in the Philippines similiar to that of the United States.

However, it soon became apparent that the U.S. planned to annex the Philippines and take full control. It was at this time that Aguinaldo cut off communication with the Americans and went into the hills to organize resistance against the Americans. The fighting escalated to become the Philippine-American War.

Unknown to much of the American public at the time, U.S. troops fighting in the Philippines numbered up to 120,000. The U.S. thought it would be easy
to take over the archipelago, but Filipinos fought with a style of combat now known as *guerrilla warfare*. This included sneak attacks on American bases and in cities before dawn in which Filipino revolutionaries, using spears, bow and arrows and some rifles, were able to slow the progress of the American soldiers. By January of 1898, there were up to 80,000 Filipinos fighting in trenches and around *barrios* and generally harassing American troops as much as possible. The U.S. downplayed the number and capacity of the Filipino revolutionaries by calling them "armed bandits" and only reporting to the American public that there were small pockets of resistance led by these bandits. The Philippine-American War continued until 1902.

The U.S. fought back and was able to control guerrilla movements by burning villages, killing supporters of the guerrillas and cutting off food supplies. They also imposed *martial law* on the Filipinos from 1902-1906. Eventually the United States gained total control of the Philippines and even Aguinaldo surrendered and declared his allegiance to the United States.

Once Philippine-American fighting died down, William McKinley, the president of the U.S. at that time, declared that U.S. policy in the Philippines would be one of "benevolent assimilation."

An American Commission was sent to the Philippines to find ways in which the U.S. could "help" Filipinos while bringing them under the protective guidance of the United States. Members of the Commission decided that while many Filipino people wanted independence, they would be unable to create a democracy without the help of the U.S.
American Rule

From the start, the United States dealt almost exclusively with an elite group of ilustrados who made up only 3 percent of the population. When a Philippines Assembly was to be elected by the people, the right to vote was granted only to males, 23 years or older who had a high school education and who owned land. This wealthy group of landowners living in the countryside was known as caciques. Also called sugar barons, these men voted themselves into power throughout the islands. This practice resulted in a number of peasant uprisings.

Many Americans at this time believed that the average Filipino was not intelligent enough to know how to vote or for whom to vote, and they considered Filipinos to be their "little brown brothers," people who needed someone to care for them and tell them what to do. At this time, the American public believed their government representatives were establishing a democracy in the Philippines, but in retrospect, it was a system which continued to allow the wealthy to dominate the rest of the country.

It should be noted however, that not all Americans thought the U.S. should have a colony and thereby being considered imperialists. Many of them actively opposed this colonization in the U.S. Congress and Senate, as well as in newspaper articles and cartoons, but the opposition was small compared to the large conservative body of U.S. leaders at the time who were motivated by personal economic and political gain. Because of ideological differences between the Republican and Democratic parties, U.S. policy in the Philippines fluctuated as various presidents came into power.

President McKinley was not sure about colonization but he believed that God had given him the Philippines and it was up to him to decide the fate of
the country. William H. Taft, the first Governor-General, who was appointed by McKinley to govern the Philippines, also had mixed opinions. While Taft thought it would take some time before Filipinos could govern themselves, he immediately began to implement educational reforms. A public primary school was started in almost every barrio. In Manila, a nursing school, a trade school, a nautical and an arts school were opened. Hundreds of American teachers traveled by boat to the Philippines to implement these educational programs. A few Filipinos who excelled in the lower grades could come to the United States to get a college education. These students were known as pensionados. At the same time, however, Taft passed the Sedition Law, which made it illegal for Filipinos to speak of or act for nationalism, limiting from the start their freedom of speech.

Woodrow Wilson, a democrat opposed to colonization, became president of the U.S. in 1912. By appointing Francis Burton Harrison, who had a similar philosophy, as Governor-General of the Philippines, he quickened the pace at which Filipinos entered and gained control of their own government. The Wilson administration was also responsible for passing the Jones Law, which stated that independence would be granted as soon as a stable government was established in the Philippines.

The Philippine Government

The move toward independence coincided with the development of a stable government—one based on the American model with separate parties, a Senate and a House of Representatives, a constitution, a president and the right of adult males to vote.
The first party to develop in the Philippines, which the U.S. found acceptable, was the Federal Party in 1900. This party gradually lost popularity to the Nacionalista Party whose program, despite Taft's Sedition Law, was total independence.

The first Philippine national elections were held in 1907, when those allowed to vote elected a legislature of 80 Filipinos who made up what was known as the lower house. It was also referred to as the National Assembly. The upper house, which was to become the Senate, consisted of Americans appointed by the U.S. president. The entire government was overseen by the American Governor-General.

In 1913, with the appointment of Harrison, as Governor-General both houses of the legislature became dominated by Filipinos. Two men who dominated the government almost from its inception were Sergio Osmeña and Manuel Quezon, both of ilustrado backgrounds. In the new Philippine legislature of 1916, Quezon was voted President of the Senate and Osmeña, Speaker of the House of Representatives. These men were members of the Nacionalista Party.

Under the national government, provincial governments were also established. Each province was known as a pueblo and had a mayor, a governor, a treasurer and a supervisor, all of whom were elected every two years.

While governing and making laws, the purpose of a government is also to maintain control of the national budget and to collect funds. This was difficult for the Philippines as the U.S., under the Payne-Aldrich Act, could send in as many U.S. products as they liked while the Philippines was limited in what it could export to the United States. At this time, the US was increasing its agricultural production and creating, through industrial innova-

-121-
tions many more products than its population could use. By having control of the Philippines the U.S. had the opportunity to expand its market.

In 1913, the Simmons-Underwood Tariff Act helped balance trade by declaring that the Philippines could now practice free trade and export any amount of goods to the U.S. with no taxes or levies.

Under Harrison, the Philippine government grew and established the Departments of Justice, Finance, the Interior and the Departments of Agriculture and National Resources. The government also created the Board of Control which gave itself the authority to control all the stocks of the Philippine National Bank, hotels, railroads and large sugar companies, as well as government owned and controlled corporations.

These controls were meant to improve the economic situation by monitoring the finances, investments and stocks of the country. They were especially aimed at the lower levels of provincial politics, where there were examples of profit-making and corruption, since virtually all of the financial resources of the country were in the hands of a few select people. Many times large loans were made to friends of government officials. At other times, money collected in taxes was used personally by the officials rather than for the good of the people.

In 1920, Warren Harding, a Republican, became president of the United States. To insure more U.S. control over the Filipinos and their government, he replaced Harrison with Leonard Wood, who shared Harding's feelings on U.S. policies in the Philippines. Angering the Filipinos, particularly Quezon, Governor-General Wood took control over many aspects of the Philippines government, making decisions without consulting the Philippine Assembly.

Wood's first goal was to withdraw the government's participation in bus-
iness. Immediately, he announced that the Board of Control, which not only controlled many Philippine companies but made profits from them, was unconstitutional and he abolished it. He then reorganized the Philippine National Bank, which was on the verge of bankruptcy. Although this helped the country economically, Filipinos did not want to give up the control over their government that they had become accustomed to during Harrison's rule. This sparked the Cabinet Crisis of 1923 in which Quezon, President of the Senate, his Vice-President, Osmeña and Manuel Roxas, House Speaker all resigned from the government.

After Wood died suddenly of a heart attack in 1927, Filipino leaders reconvened and stepped up efforts toward independence for the Philippines by continuing to make trips to the U.S. to find support for this issue, one which would be raised many times in the 45 years of U.S. colonization. Finally the OsRox Commission, made up of Sergio Osmeña and Manuel Roxas was able to get a bill passed known as the Hare-Hawes-Cutting Bill. This advocated independence after a 10 year period but also stated that the U.S. could have military bases in the islands and that, after independence, Filipinos would no longer enjoy free trade with the United States. This bill was vetoed by President Herbert Hoover but passed by Congress. However, Manuel Quezon, who controlled the Philippines Senate, did not like this bill and it was rejected by Filipino legislators. Quezon then took the leadership in securing a subsequent independence law from the American Congress, the Tydings McDuffie Act.

The Tydings McDuffie Act was passed by President Franklin Delano Roosevelt in 1934. This act was almost identical to the Hare-Hawes-Cutting Bill, but with some minor changes that made it more acceptable to Quezon. A Constitutional Convention, called for by this bill, was held in 1934. At this
time 202 delegates were elected to join together and write up the new constitution of the Philippines. Independence was then set for 1946. In 1935, Quezon was elected President of the Philippines and Osmeña, Vice President. There were 98 members in the National Assembly, and Roxas was re-elected as Speaker of the House. The Philippines had a unicameral legislature until 1940, when the Senate was re-established.

Filipinos understood that when they gained independence, tariffs would be required on their exports to the U.S. which would upset their growing economy. To help with this problem under the Tydings-McDuffie Act a plan was agreed upon in which taxes on imports into the U.S. from the Philippines would increase slowly for 15 years after independence was declared. Actually, the 25% tax usually put on all imports into the U.S. was not fully imposed until the 1970s.

While American farmers argued in Washington DC that low-cost Philippine imports would cause them to lose money, the Philippines began to prosper. Raw materials and crops were plentiful for export and few goods were imported. Unfortunately, however, those benefiting from prosperity were either Chinese merchants, Americans who had bought plantations and started businesses in the Philippines, or well-to-do Filipinos comprising a very small percentage of the population. Because the caciques were still in control, ordinary farmers and factory workers who made up the lower classes benefitted very little and continued to live in poverty. In addition, this ease in exporting to the U.S. created a dependence of the Philippine economy on free-trade, tightening the economic connection between the U.S. and the Philippines.

Other important decisions by the Philippine government included the declaration of Tagalog as the national language in 1936. Today, in the Philip-
pines, Filipino (based on Tagalog) is being actively promoted as the national language. Another innovation in pre-war politics was the right of women to vote. This was granted in 1937, and some women ran for local offices during that same year.

American Influence

As part of free trade, Filipinos became more dependent on American goods. While the U.S. helped the country by building roads, dams, bridges and railroads, Filipinos were forced to buy American cars, trucks, auto parts and gas. Gradually, it became fashionable to have American things and people began to choose American shoes and clothing, as well as other items over those which were manufactured locally. Naturally, this led to more economic problems, perhaps most importantly the weakening of the Filipino sense of economic nationalism.

To add to this dilemma, English was taught in schools and much of the history and literature taught to the Filipinos was American. From a young age, children learned primarily about George Washington's democracy as well as the "dignity of labor" as understood by the first settlers in the U.S., the Puritans, rather than about their own history. Children learned to sing "God Bless America" and "America the Beautiful."

American values and methods of doing things were not necessarily appropriate for Filipinos. The United States believed in secularization of schools, and established a public school system. Catholicism under the Americans was mostly taught in parochial schools, which were private and often expensive. Parents who could not afford private schools soon realized that if they wanted their children to be educated, they would have to accept the secular education
provided by the Americans. Similarly, in the agricultural sector, Americans thought that Filipinos would be better off if their farmland were organized the way the American midwest is set up, with large tracts of land on which a farmer lives and upon which large machines, such as tractors and harvesting machinery can be used. Filipinos owned small tracts of land, perhaps a few acres in different areas. In case one location experienced a drought or another had a flood, a farmer would have an alternative crop. Often Filipinos had land in areas distant from the village where they lived. These lands had no title nor documentation of ownership and this caused great disorder when the Americans started to change the system.

American attempts at land reforms were opposed by the landed class, but actually ended up improving the situation of the landowners. Because the average farmer could not afford large pieces of land and the farm equipment which was made for such big fields, wealthy landowners saved time and money with new American farm equipment and became more competitive, while at the same time putting laborers out of work by eliminating the need for their services. As the market prices of their goods went down, small farmers, who could not compete, ended up selling their land and becoming laborers or sharecroppers.

This growing competitive market became more like an American market and society reflected this. Landowners stopped giving interest-free loans to their farmers and hired managers to make sure these farmers did not cheat the landowners in any way. Originally, the datu, or village leader had been responsible for collecting tribute from the villagers, often in the form of rice, and distributing it to those who were too poor, old or sick to care for themselves. Later, the landowners assumed a kind of paternalistic role in the
tightly knit community, offering money or services for the less fortunate. By the 1930s, however, these systems had broken down, and this type of village welfare began to disappear.

American influence did have some positive aspects, especially when compared with that of the Spanish. The United States had a more modern outlook and helped to bring the Philippines into the 20th century. By 1935, 65% of all Filipinos were literate, and this was up sharply from 5% at the end of Spanish rule, though it could not compete with the alleged 100% literacy among the Tagalogs which the Spanish had witnessed when they arrived in the 16th century. Filipinos who went to the United States for college educations were returning to their country. The University of the Philippines was established in Manila, largely by returning Filipinos with American degrees. This university trained and produced many more teachers and other professional people sorely needed in the growing society and economy.

The building of roads and the setting up of telephone and telegraph lines as well as radio stations helped to expand communications throughout the archipelago. This made it easier for public health officials and doctors to reach outer areas and treat such fatal diseases such as cholera, smallpox, malaria and tuberculosis which could be controlled by vaccinations. Public health officials dramatically improved sanitary conditions and diets for the people in the rural areas. A result of this was an average height increase of 2 to 4 inches.

The Americans also helped farmers with irrigation systems, and methods of fertilization and growing techniques which improved their crop output. They introduced new technologies that helped the Philippines produce its own raw materials and make them into finished products.
Also, for the first time in three hundred or more years, Filipinos had some sense of individual freedom—freedom of speech, freedom of religion, the right to move about and to assemble peaceably. While Taft's Sedition Law as well as his Flag Law, which forbade Filipinos to fly the Philippine Flag, were on the books, the Nationalista Party developed and Filipinos did speak out against the government about matters with which they disagreed. Expression in the arts increased and not only did Filipinos embrace American jazz, but they gradually began to rediscover their own music and culture which had often been banned during Spanish times.

**Independence**

Independence was delayed through two world wars and for a number of reasons. While a stable government was developing and while U.S. leaders promised independence, there was always the discreet understanding that the islands were strategically and economically important to the United States.

In World War II, Filipinos learned that the U.S. could not protect them from outside forces. The Japanese occupied much of Southeast Asia, including the Philippines, and inflicted a dictatorship on the archipelago which affected all aspects of the society. Japanese values were learned in schools, new taxes were imposed, and there were many examples of violence. Some Filipinos choose to help the Japanese for survival and personal gain, and became known as collaborators. Others opposed the Japanese and conducted guerilla warfare against them from the hills. Most of the people, however, stood moderately in between and tried to go on with their daily lives as much as was possible. For Filipinos, these years were some of the darkest of their history.
When the Japanese entered the country, the Americans and many important Filipino government officials fled to Australia and the United States. This group included General Douglas MacArthur, the American who had been an advisor to Quezon, helping him to build up the Filipino defense forces.

When WWII ended in 1945 and members of the Philippine government returned, they wanted to press charges against those who had helped the Japanese. A People's Court was set up for this purpose. While some Filipinos had helped the Japanese because their lives depended on it, others had made their fortunes selling goods to their captors. It was difficult to tell who had done what without lengthy court trials, and eventually Manuel Roxas, the new president of the country, declared amnesty for all who had "been disloyal" during the war. Roxas himself and other "collaborators" were absolved, mainly through the efforts of MacArthur. Roxas was also supported by MacArthur in his bid for the presidency, and in the 1946 elections he won over Sergio Osmeña, who had been vice-president at the time of Japanese occupation. The president, Manuel Quezon, had died in exile in the U.S.

During the war, some 260,000 Filipinos had gone into hiding and practiced guerrilla warfare against the Japanese. There were at least two major groups of guerrilla fighters: those who were affiliated with the Americans still present in the Philippines and those who had communist leanings, called the HUKs (short for HUKBALAHAP). Although these groups had the same goals, they gradually split apart. The HUKs claimed that U.S. soldiers who were stationed in remote areas took advantage of the peasant farmers and treated them disrespectfully. According to the HUKs, the American soldiers took advantage of these farmers who needed them for protection against the Japanese. Not only did they take food and drink from the peasant farmers, but they made them and

-129-
their families work for the U.S. soldiers. The HUK's practices, on the other hand, included initiating grass roots movements to help the farmers, the poor and the peasants. While stationing themselves in a certain area, the HUKs would start mutual labor teams and farm-cooperatives which were based on communist-type ideology and helped the farmers and poor get back on their feet.

When Independence was granted, the HUKs continued to oppose the establishment and any pro-American ideas. Subsequently, the diverse philosophies concerning how the government should be run, which divided the Filipino people in the 1920s and 30s and continued to do so. Today, the problems which have developed because of the large rift between rich and poor are obvious to all. Most people agree that the legacy of rule by the wealthy elite over the peasants and poor which began with the ilustrados of Spanish rule and continued under American colonization is the basis of these problems. However, Filipinos disagree on possible solutions to this dilemma and for these reasons a lasting peace has yet to be experienced in the Philippines.
**GLOSSARY**

amnesty  

a pardon granted to political offenders

annex  

to take possession of a territory

barrio  

a sub-division of a town; a community often related by family ties which is found in rural and urban areas

"beneficent assimilation"  

President McKinley's term for forced colonization of the Philippines

cacique  

name for wealthy landowners in outlying areas who gained control, wealth and power during American rule

datu  

village headman

"dignity of labor"  

a philosophy practiced by the first settlers in the U.S. and still apparent today in which hard work for the sake of work builds one up in the eyes of others and of God

guerrilla warfare  

method of fighting practiced by Filipinos against the U.S. in which, instead of marching out and fighting in the open as the Americans did, Filipinos planned sneak attacks often before dawn, using whatever weapons were available to them. To protect themselves, men fought out of trenches. Another facet of guerrilla warfare is to involve all the members of a community, not just the men, in keeping silent about strategies and helping to distribute supplies and weapons.

grass roots movement  

movement at the local level, involving political activity which is usually different from or opposed to the central government.
| **indigenous** | native, found on native soil |
| **imperialism** | extension of an empire for purposes of trade, defense, protection, goods, resources |
| **insurgent** | rebel fighter |
| **landed class** | another name for the elite class of Filipinos who owned land |
| **martial law** | military government which supersedes civil law for a period of time |
| **oligarchy** | rule of a select group over the many |
| **pensionado** | a name for Filipinos who were sent to the United States to further their studies |
| **provincial** | local; of a province or smaller area |
| **secular** | worldly; not distinctly sacred or ecclesiastical; non-religious; in U.S. government, separation of church and state |
| **share croppers** | farmers who do not own land and must cultivate a plot of land owned by someone else; in return for the use of the land, the sharecropper must give a "share" or a large percentage of his crop to the landowner |
| **war reparations** | usually money given from one country to another to make up for losses and damages incurred in a war |
Emilio Aguinaldo

an ilustrado who was responsible for uprisings and became leader of the first independent state of the Philippines (before American rule); fled to Hong Kong during the Spanish-American War and, though he returned to the Philippines with the help of the Americans, he joined forces against the Americans when he realized they had plans for colonization.

Andres Bonifacio

revolutionary Filipino who came from the lower classes who led the secret society called Katipunan against the Spanish. Assassinated in 1897 by Aguinaldo's forces in a power struggle between the ilustrados who wished to have their own revolution against the U.S. Now considered a national hero for his loyalty to the Filipino people against both Spain and the U.S...

George Dewey

won fame as the "hero of Manila"; was a naval commander at the time of the Spanish American War; studied the situation in Asia, eventually became commander of the Asiatic fleet and Admiral in 1899

Hares-Hawes-Cutting Act

fore-runner of the Tydings-McDuffie Act; different in that this bill called for American military reservations while Tydings-McDuffie modified this to Naval and fueling stations as part of the agreement for independence.

Warren Harding

29th president of the United States, from 1921-1923 (see also list of presidents)

Francis Harrison

Governor-General to the Philippines from 1913 to 1921 under Woodrow Wilson; was responsible for "Filipinization" of the government by granting more power to Filipinos in their own system

Havana

capital of Cuba

Sergio Osmeña

initially, governor of Cebu, then elected Speaker of the Philippine Assembly in 1907; considered second man of the Philippines until 1916, when power
shifted over to Manuel Quezon; in 1922, elected vice president of the Senate; was part of the OsRox commission which passed the Hare-Hawes-Cutting Act (rejected by Quezon); in 1935, became vice president of the Philippines under the Tydings-McDuffie Act and later, president of the independent Philippines after Quezon died in exile; lost election to Roxas in 1935

Manuel Quezon

initially provincial governor of Tayabas, then became speaker of the Philippine Assembly in 1907; in 1911, began to campaign in the U.S. for independence as resident commissioner, elected president of the Philippine Senate in 1916 and shifted power with Osmeña to become top man of the Philippines; got the Tydings-McDuffie Act passed in 1934 and was elected president of the Philippines in 1935; remained president until he died in exile in New York in 1944

Franklin Delano Roosevelt

32nd president of the United States from 1933-1945 (see list of presidents)

Theodore Roosevelt

26th president of the United States (see list of presidents)

Manuel Roxas

became speaker of the house in 1916 and was part of the OsRox commission to the U.S.; aided Osmeña in passing the Hare-Hawes-Cutting Act; elected president of the independent Philippines in the first free election in 1945; moved to grant amnesty to all Filipinos who collaborated with the Japanese; died in office on April 15, 1948

Simmons-Underwood Tariff Act

bill passed in the U.S. in 1913 which allowed for free trade between the U.S. and the Philippines

CHAPTER 5: THE INDEPENDENT PHILIPPINES:
PHILIPPINE PRESIDENTS AND ISSUES

Introduction

At present, much of the interest in the Philippines centers around its problems. Like other Southeast Asian countries which experienced European colonization in the 16th-20th centuries, the Philippines is a country struggling to free itself from the residual effects of both the Spanish and American colonizations, which ended only in 1946. The country has achieved political independence, but social and economic problems persist.

The government of the Philippines is based on the American model of democracy. Its constitution was written under the guidance of the American colonial administration. However, although the basic institutions of democracy are present—a President, a Senate, a House of Representatives, a Supreme Court and a two-party system—the culture, social and economic systems of the Philippines are far different from the U.S. and present a much different version of democracy.

There are several reasons why this American-type democracy has taken a different path in the Philippines. First, in Philippine society, family, friends and close associates are extremely important and politicians are generally compelled to respond to personal favors. It is not unusual for politicians to use their positions to amass wealth and provide jobs for their relatives and friends. People often expect an elected official to help his or her family and friends as a matter of obligation. This often leads to "corruption" in government, something Filipinos themselves criticize.

Second, the Philippine Constitution, drafted during the Commonwealth period (American colonization), although similar to the American constitution in many of its provisions, provides for a stronger presidency. The Philippine president exerts greater veto power and more control over the House and Senate (or legislative body) than his or her American counterpart. This imbalance of power makes the legislative body especially susceptible to pressures from the president, resulting in corrupt practices on the part of both branches of the government.

Finally, the two-party system that emerged in the Philippines developed a logic of its own, consistent with the Filipino system of alliances, affiliations and leadership patterns. Individuals place more value on their own personal political programs and fortunes than on developing a particular party ideology, of the sort seen in the U.S. which separates Republicans from Democrats. Because the Philippine parties are not very different from one another, it was, and is still, easy for individuals to shift from one party to another without losing their integrity.

The weaknesses of the struggling Philippine democracy became most evident during the 20-year presidency of Ferdinand Marcos. Marcos, the 6th president of the Philippines, exploited his executive powers, by first suspending the
writ of habeas corpus, then declaring martial law. He also rewrote the Constitution, transferring all effective powers to himself and removing the limit of terms a president could serve. Marcos used his position to amass billions of dollars in personal assets, property and gold.

In February of 1986, the Philippines experienced the 4-day "people's revolution," when a huge crowd of dissatisfied Filipinos gathered in Manila. In this non-violent protest, the people stood up to the military's tanks in order to press for honest results in the election between Marcos and Corazon Aquino. This resulted in Marcos's fleeing to Hawaii in the face of "people power" and leaving the Philippine economy devastated. It then became Aquino's challenge to restore the economic system as well as the faith of the Filipino people in their government institutions.
The Philippines of the 20th Century
PHILIPPINE PRESIDENTS AND ISSUES

PART I—1946–1964

Manuel Roxas (1946–1948)

The first president of the Republic of the Philippines, Manuel Roxas, assumed office in the midst of a national crisis. The Japanese Occupation and subsequent bombing by the Americans had destroyed the nation and the economy, and had divided Filipinos into various loyalties. Roxas had two major challenges when he assumed the office: to restore faith and trust of the people in their newly independent government and to rebuild the war-ravaged economy.

After forming the new Liberal Party, Roxas defeated his long-time colleague Sergio Osmeña of the Nacionalista Party in his bid for the presidency of the new Republic. Instead of asserting Philippine nationalism, however, Roxas agreed to the Bell Trade Act which was being passed by the U.S. Congress. Under this controversial act, the U.S. agreed to pay 620 million dollars to the Philippines for war reparations in return for parity rights. This allowed American investors to exploit the natural resources of the Philippines, to set up mining projects for tin and bauxite, own sugar and pineapple plantations and establish control over oil and coal reserves, as well as public utilities. These parity rights were achieved when an amendment was added to the Constitution of the Philippines at the insistence of the U.S. before they would allow the constitution to be passed or grant the Philippines complete independence. This was a direct violation of Philippine sovereignty.

-162-
Economic Dependence

Thus, the Philippines gained political independence but remained economically dependent upon the American investors. Plantations and projects provided jobs for a large number of Filipinos, at very low wages. In addition, the U.S. gave the Philippines trading preferences by keeping taxes on imports into the U.S. lower than taxes on imports from other countries. The Philippine peso became dependent on the U.S. dollar, causing the economy of the Philippines to fluctuate along with the U.S. economy.

Roxas tried to lessen the effects of the Bell Trade Act and other post-war agreements with the U.S. by establishing import controls. These controls put a stop to free and unlicensed imports of goods from the U.S., so that local Philippine industries could begin producing such goods as batteries, dairy products, pharmaceuticals and other items on their own. Throughout the years, however, American businessmen continued to prosper, because it was usually American owned companies which produced these light-industry products in the Philippines.

As part of the Bell Trade Act, the U.S. was also allowed to station its military forces at U.S.-controlled bases throughout the archipelago, paying no rent on the land until 1975. Today, Filipinos are faced with the issue of whether to allow these military bases to continue operating in the country beyond their contractual expiration of the Military Bases Agreement in 1991. In this way, the long term effects of the Bell Trade Act are clearly an integral part of the Philippines' current political problems.
Elpidio Quirino (1948-1953)

Elpidio Quirino, who had been the vice-president under Roxas, took over when Roxas died of a heart attack in 1948. In 1949, he was elected president over his opponent, Jose P. Laurel by a narrow margin. This second postwar election was considered the "dirtiest" until that time. It was notorious for its use of violence and "flying voters," voters who were either registered to vote in other precincts or were already dead. After this election, in 1950, the organization known as NAMFREL (National Movement for Free Elections), which was supported by the U.S. government, was begun. This organization would have great importance in Marcos's final downfall in 1986.

The HUK Rebellions

The lack of trust in the government during the presidencies of Roxas and Quirino lead to the increased popularity of such insurgent groups as the HUKS (short for Hukbalahap, or Hukbong Bayan Laban Sa Hapon, meaning: Army to Liberate the Country from the Japanese). This group had been formed in rural areas during the Japanese occupation. In World War II the HUKS fought guerrilla-style warfare against the Japanese, first with the help of the Americans, and later on their own. After the war, the HUKS continued their struggle against exploitation of peasants and workers by the elite landowners of the Philippines.

One reason the Americans were leery of the HUK fighters was their affiliation with the Communist Party. This party had been established in the Philippines in the 1930s and was soon pronounced illegal by the American government. It continued to be outlawed by successive administrations even after the Philippines became independent in 1946.

-164-
The HUKs, in turn, were dissatisfied with the policies of American soldiers during the Japanese Occupation, which included demanding food and lodging from poor people in rural areas. The HUKs began their own programs of working with the rural poor on farming projects and rebuilding areas decimated by fighting. Taking advantage of the fact that many wealthy landowners had fled the country because of the war, the HUKs proceeded to distribute the abandoned plantations and farm land among the same peasants who had worked for the landowners for meager wages.

When the landowners returned after the war, they reclaimed their land and the government became involved in fighting against the HUKs who opposed them. With the help of the peasant farmers, the HUKs continued to incite uprisings throughout the countryside. Because they were no longer fighting the Japanese at this time, they changed their name to HMB (Hukbong Mapagpalaya ng Bayan, meaning: National Liberation Army) but continued to be known by both names.

For Roxas, controlling the HUKs was a top priority. After he died, Quirino assumed this task. Quirino first tried offering amnesty to all those involved with the HUKs, but this proved ineffective. He then appointed Ramon Magsaysay as his Secretary of Defense. Magsaysay had been a guerrilla fighter during the war and was also an anti-communist. While he was Secretary of Defense and later, as President, Magsaysay was successful in breaking down and defeating the HUKs with considerable support from the United States.

**Ramon Magsaysay (1954-1957)**

Magsaysay, in office from 1954-1957, was probably one of the most well-liked presidents in the history of the independent Philippines. He was known for being "humble" and for making frequent visits to barrios and slum areas to
find out how to best serve the people. He also made it a point to avoid throwing lavish parties and giving jobs to his friends and relatives as other politicians had done. When people came to him with problems, Magsaysay often gave them immediate, personal attention. He was also the most effective president in minimizing local corruption in rural areas, building roads and irrigation systems and improving conditions in the barrios through honest means.

However, these changes did not last long. Magsaysay’s new programs were not drastic enough to change the direction of the country, and after his untimely death in 1957, his new programs, and the trust which he had succeeded in restoring between the people and the government faded. His land reform bills and rural development projects were attacked as being ways of pacifying the peasants rather than solving their long-term problems. In addition, Magsaysay was sharply criticized by his opponents for closely associating with the U.S. government and catering to their interests. In order to secure more loans from the U.S., Magsaysay passed the Laurel-Langley Agreement under which the U.S. would continue to have parity rights to Philippine resources and utilities. Again, this was resented by Filipino nationalists who argued that American influence in Philippine affairs should be diminishing rather than expanding.

Carlos Garcia (1957-1962)

When Ramon Magsaysay died in a plane crash, his vice-president, Carlos Garcia became his successor and went on to win the presidency as an incumbent in the 1957 elections and to serve until 1962. Garcia was known for his Filipino First policy, which gave preference to Filipino businessmen over foreigners in the practice of trade and required at least 60% ownership by Filipino nationals.
of Philippine corporations. Garcia also launched an austerity program to curb
government spending. However, his purchase of a presidential yacht and air-
plane during his term was viewed by critics as incongruous with this policy.

Political Parties

It is important to note that Philippine politics, although subscribing to a
two-party system, comprised of the Liberal Party and the Nacionalista Party,
does not necessarily focus on opposing ideologies. For this reason, leaders
are able to switch back and forth depending on which group could give them
more support.

The Liberal Party was formed when Manuel Roxas ran against the longstanding
Nacionalista Party member, Sergio Osmeña. Since then, other presidents
continued to switch from one party to the other, including Ramon Magsaysay and
Ferdinand Marcos.

One man who attempted to rearrange these party politics was Senator Claro
Recto, who called himself a nationalist and openly spoke out against the U.S.-
backed policies, including free trade and the dependency of the Philippine
peso on the U.S. dollar. His major complaint with the government was that
U.S. policies hurt the Filipino people and made them more and more dependent
on U.S. loans. He also spoke out about the lack of difference between the two
parties and the fact that the U.S. had such control, not only over the economy
of the Philippines, but over the elections and activities of the presidents.
Jeopardizing his chances of ever becoming president because he was so outspo-
ken, Recto enlisted the support of nationalist groups such as the Democratic
Alliance during Garcia's presidency. Because the two parties were so similar,
however, Recto was unable to get his nationalist and progressive ideas incorporated into the government.

**Diosdado Macapagal (1962-1966)**

In 1962, García's vice president Diosdado Macapagal, a member of the Liberal Party, took office, calling for a new era of peace and prosperity. Macapagal's major contribution was in land reform, and while he was in office the government purchased some estates from land-owners and redistributed them among peasants. Another move toward land reform which he attempted was the Share-Tenancy Act in which tenants could sign a contract with the landowner and turn over only 25% of their crop in return for the use of the land. In this way, landowners could not take advantage of the peasant farmer by raising prices and forcing the farmer to become indebted to him. However, these land reform policies had many legal loopholes in them and landowners continued to exploit the tenants.

**Land Reform Policies**

The desire of peasants to own their own land, rather than work on others' lands, continues to be a problem in today's Philippines. Land reform policies and land distribution have always been hot issues in the Philippines. Having land had once been the birthright of every Filipino. Before Spanish colonization, land had not been owned by any individual, but was utilized by all members of the community and respected as a major source of livelihood.

During Spanish colonization, the Catholic Church of Spain and Spanish soldiers claimed ownership of large tracts of land and established estates and plantations throughout the archipelago. Owning land gradually became a great
source of revenue and power for Filipinos, Spanish, Mestizos, (people with Spanish-Filipino or Chinese-Filipino mixed blood) and Americans. Peasant farmers worked the land, taking a small percentage of what they grew for themselves and their families. This was and still is known as tenant-farming.

Traditionally, the landowners felt some sort of responsibility for the tenant farmers and provided them with benefits such as interest-free loans and help in emergencies, as well as yearly harvest celebrations. More recently, however, these landowners have come to see their plantations as investments, and maintain them strictly for money-making purposes. This new arrangement, in which benefits for farmers were cut, has made life much more difficult for the tenant farmers. In the case of sickness or drought, they are forced to incur debts with high interest rates from banks and merchants, in order to feed their families.

Land reform has always been difficult to implement in the Philippines, mainly because many landowners also hold government positions at the national or local level. Even though many programs have been passed by the government over the years, they have not been done with the commitment to stop landowners from finding loopholes in these reforms or simply ignoring them.
PART II—1965-1988

Ferdinand Marcos (1966-1986)

In 1965, Ferdinand Marcos was elected president, defeating the incumbent Macapagal. Marcos was reelected in 1969 when he defeated Sergio Osmeña, Jr. The Philippine constitution limited Marcos to two terms, but because he wanted to remain in power longer, in 1972, he declared martial law. This sharp deviation from the political system followed by previous leaders, gave him absolute power. Marcos claimed that he imposed martial law because of what he saw as the threat of internal subversion by left-wing and Muslim insurgencies.

During his 20-year rule, Marcos not only plundered his economy, but also ruined the country's political institutions particularly during the martial law period from 1972-1980.

Under his rule, unemployment skyrocketed and the gap between the rich and the poor widened so sharply that 50-75% of all Filipinos lived below the poverty level. Economic problems worsened when the world-wide oil crisis in 1973 led to the devaluation of the peso. Before 1970, one American dollar equalled three pesos. After the devaluation, there were six pesos for every dollar and by the time that Marcos fled the country in 1986, the exchange rate was 20 pesos for every dollar.

Because of these devaluations and consequent economic crises, exports from the Philippines to other countries became less expensive but Filipinos in turn made less in wages and had to pay more for their daily needs, including food, clothing, and housing. In addition, oil prices rose as much as 400% and this affected the prices of oil and petroleum products, such as fertilizer and plastic items. On top of this, corruption in the government became so
pervasive that money which came in from foreign investments, loans, and funds and other assistance given by the U.S. for military bases was soon squandered or stolen by the Marcoses and their allies. All of these factors lead to a national debt which reached an estimated 26.5 billion dollars at the time the Marcoses 1986 downfall.

The Revitalized Communist Party of the Philippines

As social, political, and economic conditions in the Philippines degenerated, the armed left gained power in the mountain areas and rural sectors of the islands. In 1969, the New People's Army (NPA), was established as the military arm of the new Communist Party of the Philippines (CPP—Marxist-Leninist-Mao TseTung Thought) signifying by their name that they followed the ideologies of these three leaders of Communism. This revitalized Communist Party was actually a "splinter group" composed of younger members of the Old Communist Party and was now led by Jose Maria Sison who began to press more openly for armed revolution.

The NPA and the CPP are actually members of a larger "umbrella" organization known as the National Democratic Front (NDF). This group put out a 10-point program that later grew to a 12-point program for leadership which would be radically different from the American-type democracy previously imposed in the Philippines. This program included the implementation of cooperatives, where peasant farmers work together and share the benefits of their work equally, the organization of mutual labor teams and the education of people in rural areas about some alternatives to tenant farming. The NPA continues to carry out these projects in rural areas.
The NDF supports the theory that the country's history of landlordism, U.S. and multinational investments, and the accumulation of wealth by government officials has produced the large rift between the wealthy and the poor of the Philippines. Reconstructing a more egalitarian social and political system will mean making structural changes which the NDF argues cannot take place within a system that has developed through corruption, personal interests and colonialism. The NDF sees itself as a socialist organization, in the sense that its basic goal is to achieve more rights for peasant farmers, workers and the majority of Filipinos through peaceful means.

During his years in office the more Marcos denied the people their rights, and the more the economy worsened, the greater the NPA's power became in rural areas and among the urban poor. In order to control the NPA, Marcos amassed an army of at approximately 300,000 men who used brutal tactics, such as opening fire into student demonstrations in the city, or hamletting, which was the burning of villages to force the entire population of the village to move or be moved elsewhere. After experiencing hamletting, a village became a free fire zone where government troops would fight the NPA. Eventually, anyone who spoke out against the government became labelled as a "Communist" and was dealt with in these harsh ways.

Martial Law

In 1970, Marcos called for a Constitutional Convention with the understanding that many aspects of the original Philippine constitution including parity rights, needed to be reconsidered and revised. In 1970, 180 people began updating the Justice System and examining other important issues. One issue which was hotly debated on the convention floor was whether or not to
extend the term of office of the president. At that time, Marcos was nearing
the end of his second term of office and by law would have had to step down.
Since his second election he had become increasingly unpopular due to media
exposure of his corruption and manipulations. Frequent student demonstra-
tions, strikes by jeepney drivers, and the growing strength of many opposition
groups were all signs of the increasing dissatisfaction. Citing examples of
the growing lack of peace and order throughout the Philippines, Marcos de-
clared martial law on September 23, 1972, and immediately had all of his
opponents who were members of the Constitutional Convention arrested without
charge.

Under martial law, Marcos restricted the travel of Filipinos throughout
their country and abroad, censored all newspapers and media, imposed a curfew
upon the people of Manila, and controlled the amount of information about the
Philippines which might be on the evening news in other countries. He also
banned the rights of workers to strike, thereby assuring that factory and
landowners could continue to pay low wages and provide unhealthy working con-
ditions. Cracking down on student demonstrators and launching a massive cam-
paign against the Communists, Marcos harassed, detained and murdered his op-
ponents, many of whom were non-communists. In this way, he silenced any com-
mentary or criticism of his regime.

Along with martial law, Marcos suspended the writ of habeus corpus which
is the right for individuals to have a fair and speedy trial after being ar-
rested. This suspension meant that people under possible suspicion of com-
mitting subversive acts could simply disappear while in the hands of the
military, leaving the victims' families unaware of their fate or whereabouts.
The U.S. government continued to back Marcos after he declared martial law, even though they were aware that he was taking drastic steps to prolong his power, the major reason apparently being that Marcos was a strong ally of the U.S. in fighting communism. U.S. politicians showed their support for Marcos's policies by passing bills which raised the amount of assistance paid for the Military Bases Agreement. The 1979 renewal of this agreement gave Marcos more than 500 million dollars for the five years leading up to 1979, and an additional 900 million dollars was paid during the Reagan administration for further rental and economic aid.

Under martial law, Marcos and his cronies gained ownership or control of virtually all of the public utilities and foreign investments in the Philippines. To maintain the amount of money entering the country and therefore coming into his own hands, Marcos ignored the expiration date of the Laurel-Langley Agreement, and let investors go far beyond the amount of parity rights allowed under this agreement. Foreign investors were again able to own up to 60% of corporations and to profit from the low cost labor of Filipino workers. While these and other projects were designed to bring money into the Philippines, American investors actually took out more than they brought in, and most of the rest went to the Marcoses and their associates.

One of Marcos's many development projects was the Chico Dam project which involving the damming of four major rivers. This project caused many people in Northern Luzon to lose their ancestral lands. Another project was the San Juanico Bridge, connecting the islands of Samar and Leyte. Marcos also organized the construction of geothermal and nuclear power plants. On top of these, he had a huge bust of himself erected on a mountain top in the manner...
of the American presidents immortalized on Mt. Rushmore, as his birthday gift to his wife Imelda.

As a further aggravation to the country's economic problems, Imelda Marcos, the first lady, openly flaunted her wealth as well. In addition to owning several mansions and other pieces of real estate in the Philippines and abroad, the Marcoses gave lavish parties and Mrs. Marcos made many expensive shopping trips to New York, Hong Kong, Paris, London and Honolulu, filling her closets and home with expensive jewelry and artwork, clothing, shoes, and perfume. After the Marcoses were forced to leave their Manila home of Malacanang, 3,000 pairs of shoes were found in Mrs. Marcos's closet along with racks of evening gowns, furs, and cases of cosmetics.

**Cory Aquino and the "People's Revolution"**

It was only after the assassination of popular politician Benigno Aquino who was shot as he was leaving his plane in Manila in 1983 that citizens from all classes of the Philippines rallied together against Marcos. Ninoy Aquino, as he was called, had been in the United States planning the economic recovery of the Philippines. Aquino was a member of the Liberal Party and did not want to overthrow Marcos, but he did hope to run against him in an honest election. Among his goals was renewed dialog between the government and the CPP.

The shocking assassination of Benigno Aquino was captured on international television, and a man who was thought to be the assassin was shot and killed before he could be questioned. Even today it is unclear who killed Aquino, although it is commonly believed to have been a member of Marcos's military establishment.

-175-
After the incident, people around the world became more concerned about the situation in the Philippines. Tourism declined as did some foreign investments. At Aquino's funeral, 2 million people from all parts of the island and all social strata gathered to pay their respects to a martyr.

The people of the Philippines convinced Corazon (Cory) Aquino, the wife of Ninoy, to run for president in his place in the 1986 elections. Under the motto of "People Power," the Catholic Church, the public and many outsiders monitored the presidential elections. In a move to exonerate himself, however, Marcos had decided to call a "snap election" before the prescribed date in the hopes that Aquino would not have much time to campaign. During this presidential election, held early in 1986, Marcos clearly lost to Cory Aquino, but when faced with this fact he tried to use the power of the military to intimidate the pro-Cory voters, and falsify the counting of ballots. This was the beginning of the end for Ferdinand Marcos.

Because of the strict election surveillance, her popularity and the public sentiment against Marcos, Aquino and her party, LABAN (short for Lakas ng Bansa, meaning People's Power Party) won the election. When Marcos refused to accept the election results, the people of the Philippines gathered at EDSA (Epifanio De Los Santos Avenue) where they staged a four-day protest in which millions of Filipinos from all social classes demonstrated against Marcos, his family and supporters.

One major factor in the "people's revolution" was that two of Marcos's top military men, John Perico Enrile and Fidel Ramos quit their positions of Minister of Defense and Chief of National Police respectively and joined Aquino, later becoming important military leaders under her presidency. Many other members of the military followed suit rather than fight against their
own people, first secretly flashing the LABAN sign (shaping an L with the finger and thumb), then eventually leaving their posts to join the swelling crowd at EDSA.

Another important factor in the success of the "people's revolution" was the broadcast of "Radio Veritas" which was heard throughout the islands and especially by the people gathered at EDSA. Broadcasts included speeches by prominent Filipinos, including Cardinal Sin, leader of the Catholic Church in the Philippines and supporters of the movement against Marcos. When the transmitter of this "bandit radio station" was bombed by the military, broadcasters moved to another station where they continued to speak out against Marcos for the first time in years.

It was a period of great victory for Filipinos, who finally had a voice in the destiny of their country. The "people's revolution" was exemplary because it was non-violent, even in the face of the military. Many say that there was "divine intervention" from God which allowed the people to stand up against armed tanks. Others believed that the ultimate success of the "revolution" was the joining of all social classes in a common goal. Today, looking back at the non-violent "people's revolution," it is clear that, although the government did not change as much as it was hoped, but that through sheer will the Filipino people voted in the government of their own choosing and put an end to the Marcos regime.

In February of 1986, by arrangement of the U.S., Marcos fled the country and arrived in Hawai'i with his family, their supporters and billions of dollars in real estate deeds and gold. It then became Cory Aquino's task to rebuild the economy and gain control of the country.

Her first step was to draft a new constitution which created major
changes in the government, the first of which was the reinstatement of the
limit of terms a president could serve as well as a new balance of power
between the country's various institutions. She also began to attempt to
balance a budget which showed billions of dollars of debts by rescheduling the
payment of loans from foreign countries.

After her election, the new president experienced a number of coup at-tempts. She was also faced with working out differences in policy between
herself, her vice-president, Salvador Laurel, and the military advisors who
had joined her from the Marcos regime. Aquino, a moderate, was considered too
weak to face many of her opponents on both the right (the military advisors)
and the left (those leaning toward socialism and communism), and dissatis-
faction with her policies in the form of coup attempts did not stop. However,
er her advisors continued to oppose the NPA and the Bangsa Moro Liberation Army
of the Muslims in the Southern Philippines, and to maintain a strict presence
at sites of development including mines and timber-clearing operations.

The 1986 "People's Revolution and the subsequent end of the Marcos regime
seemed to indicate real change in the Philippines. The problems left behind
by the 20-year Marcos administration, however, are deeply imbedded in the
social and economic systems and will take time to be solved. Many people
believe that the traditional measures of reform implemented by President
Aquino are not strong enough, because the economic system is still completely
dependent on U.S. loans and external factors. Poverty persists, as does
corruption, though it is not as blatant nor as extreme as it had been during
the Marcos years. The rich still flaunt their wealth, and many members of the
military continue to commit human rights violations. The future of current
land reforms seems dismal.
A growing majority of Filipinos feel that only through a total change in the social structure and government philosophy can the Philippines begin to function as a truly liberated and independent nation capable of directing its own economy and its future. Signals of this new ideology can be seen in the growing membership of the NPA, which reached 23,000 in 1987, and is said to be operating in almost every region of the Philippines. As the Military Bases Agreement with the U.S. moves toward its expiration date in 1991, there is the widening popular opposition to maintaining the two major U.S. military bases, Clark Air Base and the Subic Naval Base, both near Manila and on the island of Luzon.

These problems, which have been evident since the beginning of Philippines independence make Corazon Aquino's success contingent on the relationship between her government and opposition groups who identify with particular issues and areas in the Philippines.
<table>
<thead>
<tr>
<th>Term</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>absentee landowners</td>
<td>people who owned land in rural areas but chose to live in larger cities such as Manila and therefore left the responsibilities of their tenant farmers to be handled by managers; usually absentee landownership meant a focus on the land as an investment, rather than source of livelihood.</td>
</tr>
<tr>
<td>Bangsa Moro Liberation Army</td>
<td>the army of the Moro Liberation Front, an organization of Muslim insurgents in the Southern Philippines which wishes this area to secede from the rest of the Philippines and to become an independent nation</td>
</tr>
<tr>
<td>barrio</td>
<td>a sub-division of a town, a community often related by family ties which can be found in both rural and urban areas</td>
</tr>
<tr>
<td>Communist Party of the Philippines (CPP)</td>
<td>a party which was originally called the P.K.P. (Partido Komunista ng Pilipinas) and began in the early 1900s. After that, the CPP was known as Hukbalahap (HUKs and HMG) until the 1950s. After many divisions and reorganizations within the Party, the CPP emerged in the 1970s as a powerful force which used the NPA as its military arm. The Communist Party's interest lay in equal distribution of goods and money for all Filipinos, and in armed struggle as the means to making these changes (see also NDF).</td>
</tr>
<tr>
<td>cronies</td>
<td>popular term for friends, supporters and family of Marcos who benefitted financially and by having more rights during Marcos' rule</td>
</tr>
<tr>
<td>exile</td>
<td>long absence from one's country, during which one is forbidden by law to return there, usually due to government pressure or enforcement</td>
</tr>
<tr>
<td>free-fire zone</td>
<td>term for a village which has been &quot;hamletted&quot; in which the NPA and the military engaged in open warfare</td>
</tr>
</tbody>
</table>
GLOSSARY (cont.)

free trade  organized during American colonization; allowed goods to move back and forth between the U.S. and the Philippines without taxation

guerilla warfare  a type of warfare which employs sneak attacks, involves members of the community for distributing weapons and other supplies, and is generally fought by groups who do not have much financial backing but make do with strategy and the ability to appear and disappear quickly

habeus corpus  the rights of citizens to have a quick and speedy trial before being jailed

hamletting  technique used by Marcos's military in which villages were burned down in the hope of filtering out insurgents and sympathetic villagers

HUKBALAHAP  short for Hukbong Bayan Laban sa Hapon, meaning: Army to Liberate the country from the Japanese; this group fought guerrilla warfare against the Japanese in rural areas

HMB  abbreviation for Hukbong Mapagpalaya ng Bayan meaning: National Liberation Army; this group continued to fight guerrilla warfare against elite landowners and the military after WW II

import controls  controls placed on the amount of products or types of products which can enter a country, in the hopes of encouraging that country's own industry

LABAN  Laksa ng Bangsa, meaning People's Power Party; party, sign and slogan for the election of Corazon Aquino in the 1986 elections against Marcos
land reform attempts made throughout Philippine history to redistribute land owned by the wealthy to the poor in hopes of a more egalitarian economic system

legislative body body that prepares and enacts laws; the House of Representatives and the Senate

Liberal Party Party started in 1946 as an offshoot of the Nacionalista Party. This party's most important difference from the Nacionalista Party involved the question of collaborators. Roxas, with the Liberals, wanted to excuse all collaborators after the Japanese occupation and the Nacionalistas wanted to see all collaborators punished.

martial law military government which supersedes ordinary law

mestizo person of mixed Spanish-Filipino or Chinese-Filipino heritage.

Nacionalista Party Formed in 1907, this party was developed in opposition to the first party of the Philippines, the Federalista Party. Throughout the American colonization this party called for independence although it members did not stress this once in office. Later, it became the alternative to the Liberal Party though its platforms were not much different.

National Democratic Front (NDF) The umbrella organization of the CPP and the NPA which has a 10-point program for improving the situation in the Philippines by changing important government policies. The NDF supports a socialist-type government created through peaceful change.

</table>
AGREEMENTS, ACTS AND LAWS

Agricultural Tenancy Act
Passed by Magsaysay, this act created a court of Agrarian relations the purpose of which was to monitor land reforms and the actions of landowners. According to this act, landlords were not allowed to simply eject tenant farmers from their land without presenting their reasons to the board.

Bell Trade Act
Signed by Manuel Roxas in 1946, this involved a parity amendment to the Philippines constitution which allowed American businessmen to have rights over natural resources, utilities and land in the Philippines. Free trade with the U.S. was also prolonged, as well as a fixed rate of exchange between the U.S. dollar and the Philippine peso at 2 pesos for every dollar. This could not be changed without U.S. consent.

Filipino-First Policy
Began by Garcia, this policy made it a law that at least 60% of all corporations operating in the Philippines had to be owned by Filipino nationals which meant the exclusion of Chinese-Filipinos as well as foreigners. Foreign investors still managed to find ways to show ownership by Filipinos while taking the profits outside the country. However, this policy was helpful in raising the national income a small percentage, because it stressed the need to give preference for Philippine products over others.

Investment Incentives Law
Under Marcos this law encouraged foreign investments in which only 40% of corporations had to be owned by Philippine nationals instead of the original 60% called for in the Constitution.

Land reform Code
This land reform passed by Quirino provided a Bill of Rights for agricultural workers and abolished share tenancy. However, because of the many legal loopholes, it was not very effective in establishing long-term leases for tenant farmers which would enable them eventually to own the land.
<table>
<thead>
<tr>
<th>Agreement/Act</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Laurel-Langley Agreement</td>
<td>Signed by Magsaysay in 1954, this continued parity rights for Americans. In 1974, Marcos reinstated this act.</td>
</tr>
<tr>
<td>Manila Pact</td>
<td>Passed in 1954 under Magsaysay; made the Philippines part of SEATO, the Southeast Asian Treaty Organization which meant the Philippines received some more war reparations in exchange for dispatching Filipinos soldiers to fight in U.S. wars abroad, including the Korean and Vietnam Wars.</td>
</tr>
<tr>
<td>NAMFREL</td>
<td>The National Citizens Movement for Free Elections which was begun after the election of Elpidio Quirino. This was the idea of the U.S. and the CIA to insure fair elections in the Philippines, and was most important in Marcos' loss in the &quot;snap election&quot; in 1986.</td>
</tr>
<tr>
<td>Philippine Rehabilitation Act</td>
<td>$100,000,000 was given by the U.S. for surplus military property, $120,000,000 given for reconstruction of highways, $400,000,000 for compensation of property losses and damages.</td>
</tr>
<tr>
<td>Property Act</td>
<td>Signed by Roxas; all property and real estate owned by Americans would be respected</td>
</tr>
<tr>
<td>Quirino Foster Agreement</td>
<td>Signed by Quirino, this gave the U.S. the right to make decisions for the Philippines about how U.S. and Philippine money would be spent in technological development in the Philippines. This way the U.S could decide to fund projects which were beneficial to U.S investors such as mining and timber-cutting.</td>
</tr>
<tr>
<td>U.S.-R.P. Military Bases Treaty</td>

CHRONOLOGY (cont.)

1950
Filipinos are sent to fight for the U.S. in the Korean War

April 27, 1951
U.S.-Philippine Economic and Technical Agreement is signed giving U.S. more say in military and economic matters

1952
Report is released by an American agency saying that land reform is the only way to fight Communism

1952
Land Reform Code passed which calls for abolition of share tenancy and the establishment of agricultural leasehold systems and a bill of rights for agricultural workers; however, many legal loopholes exist

1953
Magsaysay switches from Liberal to Nacionalista Party in order to run against Quirino

1954
Magsaysay becomes president, with Carlos Garcia as V.P., winning over Quirino

1954
Southeast Asia Treaty Organization (SEATO) organized with U.S., France, Great Britain, Australia, New Zealand, Thailand, Pakistan and the Philippines

1954
Agricultural Tenancy Act passed which creates a court of Agrarian relations which prohibits landlords from ejecting tenant farmers without first appearing before the board

1955
Land reforms passed by Magsaysay which only affect large plots of land (300 hectares for individuals and 600 hectares for corporations

1955
Laurel-Tangley Agreement passed by Magsaysay and the U.S. Congress

1957
Carlos Garcia wins presidency as a Nacionalista candidate, but has Diosdoro Macapagal, (a Liberal) voted in as his VP

August 28, 1958
Garcia starts Filipino First policy which qualifies Filipinos to get preference in commercial, industrial enterprises over non-Filipinos and 60% capital stock ownership, angering many American businessmen
1958 | Garcia negotiates loans with the U.S. to help the failing Philippine economy

1960 | Philippines population reaches 27 million

1961 | Ferdinand Marcos becomes campaign manager for election of Macapagal

1962 | Macapagal "floats" peso in a free market on the advice of the U.S. and with approval from the World Bank; peso becomes devalued: 3.90 pesos to one U.S. dollar

1964 | Marcos switches from Liberal to Nacionalista Party to run against Macapagal, wins in expensive election

Oct 2, 1964 | Student demonstrations against parity rights and U.S. bases in Manila

1965 | Marcos elected President of the Senate as a Liberal

1965-8 | Marcos begins extensive road and school building program

1969 | Marcos re-elected in fraud-marred election

March 29, 1969 | Communist Party of the Philippines organizes the National People's Army

1970 | Philippines population reaches 37 million

1970 | Marcos calls for constitutional convention to be held in Manila.

1970's | Marcos incorporates agrarian reforms which include new seeds and "miracle rice" which yields double the amount of rice

1971 | Philippines suffers from floods, bombs, and general discontent.

1971-1972 | Nationwide jeepney strike because of rising oil prices.

Sept. 21, 1972 | Marcos declares martial law; 30,000 Filipinos arrested for subversion

December, 1972 | Attempted assassination of Imelda Marcos

## PHILIPPINE PRESIDENTS

<table>
<thead>
<tr>
<th>President</th>
<th>Party</th>
<th>Term</th>
<th>Details</th>
</tr>
</thead>
<tbody>
<tr>
<td>Manuel Quezon</td>
<td>Nacionalista</td>
<td>(1935-1944)</td>
<td>Born in 1878, he was the first president of the Philippines, known then as The Philippine Commonwealth, (still under U.S. rule.) Quezon was in law school at the time of the 1896 revolution against Spain and was perhaps the most important participant in the politics of the Philippines. His career included being a member of the Philippine Assembly, second in power only to Sergio Osmeña. He usurped the top position from Osmeña in 1916 and remained the top man until his death in 1944. His famous slogan was: &quot;I would rather see the Philippines run like hell by Filipinos than run like heaven by the Americans.&quot;</td>
</tr>
<tr>
<td>Sergio Osmeña</td>
<td>Nacionalista</td>
<td>(1945-1946)</td>
<td>Also born in 1878, he was the second president of the Philippines; as vice president, he took over office when Quezon died. Osmeña was known as the quieter of the two, and served alongside Quezon as second man for 40 years. He is most remembered for his trips to Washington with Manuel Roxas to push for independence, resulting in the Hare-Hawes-Cutting Act. He lost the presidency to Roxas after independence in 1946.</td>
</tr>
<tr>
<td>Manuel A. Roxas</td>
<td>Liberal</td>
<td>(1946-1948)</td>
<td>Became the first president of the independent Philippines with the support of the U.S. and passed bills to get war reparations, but he was unable to stop corruption and the HUK rebellions or to restore the faith of the people in the government. He died of a heart attack while in office. Roxas was controversial because he had been a &quot;collaborator&quot; during the Japanese occupation and, once in office he offered pardons for all collaborators. He was also a founder of the Liberal Party.</td>
</tr>
<tr>
<td>Elpidio Quirino</td>
<td>Liberal</td>
<td>(1948-1953)</td>
<td>Took office as Roxas' vice-president and spent much of his presidency gaining power in the Liberal party. He was known for election fraud when he ran for a second term in 1949. He appointed Magsaysay as Secretary of Defense after his offer of amnesty for all HUK rebels was unsuccessful. His political history included one term in the House and three in the Senate. He also served in the Constitutional Convention and was the Secretary of Finance and Secretary of the Interior before becoming president.</td>
</tr>
<tr>
<td>Ramon Magsaysay</td>
<td>Nacionalista</td>
<td>(1954-1957)</td>
<td>Born in 1907, he was probably the most popular president, making a point to speak to the people, spending time in barrios and instigating many land reforms. He also opened the presidential palace to the people in</td>
</tr>
</tbody>
</table>
Manila. To become president, Magsaysay switched from Liberal to Nacionalista Party and had controversial U.S. support from the government and the CIA to help him in campaigning and in defeating the HUKs. He passed the Laurel-Langley agreement in exchange for U.S. support and loans. He died in a plane crash.

**Carlos P. Garcia**  
(1957-1962)  
Nacionalista

Succeeded Magsaysay as V.P. but had trouble gaining power in the Nacionalista Party and had to fight a Liberal Senate and House so that not much was done about land reforms during his presidency. He did pass the Filipinos First policy which helped the economy somewhat. However, he also began action toward decontrol of imports which was furthered by Macapagal and Marcos, and which caused problems for the economy.

**Diosadado Macapagal**  
(1962-1966)  
Liberal

After being Garcia's VP, he won election as a Liberal; but spent much time trying to solve party differences rather than getting things done. He passed the land-tenancy acts and land reform codes which did not change the situation much because of legal loopholes. Later, he lifted import controls and caused the peso to become devalued after "floating" it on the free market. Because of decontrols on imports, the Philippines was forced to take more loans from the U.S.

**Ferdinand Marcos**  
(1966-1986)  
Nacionalista

He was president for 20 years, after declaring martial law. He stockpiled billions of dollars as president while the Filipino people suffered. Marcos began his political career as a liberal but switched to the Nacionalista Party to win the presidency, which he did in a bitter election in 1965. He continued to win elections for the next 20 years through voter fraud. With his wife Imelda, he lived extravagantly and ruled his country like a dictator. After a popular uprising in 1986 the Marcoses were exiled to Hawaii.

**Corazon Aquino**

Ran for president after her husband was assassinated in 1983 and won under LABAN Party (People's Power Party) in 1986 against Marcos. Critics called her an "ordinary housewife" but Aquino represented strong moral leadership for the Philippines. She drafted a new constitution which was passed in 1987, and which rescheduled debt payments to foreign countries. Under this constitution, she was given a six year term. Aquino stands as a moderate between the rightists (military) and the leftists (NPA, CPP) in the Philippines.
MATCH THE PRESIDENTS

CARLOS GARCIA     DIOSDADO MACAPAGAL
RAMON MAGSAYSAY   FERDINAND MARCOS
SERGIO OSMENTA    MANUEL QUEZON
ELPIDIO QUIRINO   MANUEL ROXAS
CORAZON AQUINO

1. was the second man to Quezon during most of his political career; this man also lost a presidential election to Manuel Roxas.

2. passed Filipino-First policy and instituted the presidential yacht and airplane.

3. unsuccessfully offered amnesty to the HUKs, then looked to Magsaysay for other solutions.

4. was the first president of the independent Philippines and was responsible for passing the Bell Trade Act.

5. fought successfully for fair elections and won the presidency after the "People's Revolution."

6. was the most popular president with the people; he also passed the Laurel-Langley Agreement.

7. passed the Share Tenancy Act after calling for a new era of peace and prosperity as a Liberal.

8. imposed martial law for 8 years while stockpiling billions of dollars for himself and his wife.

9. was the first Philippine president and was also the top man in politics for almost thirty years.

   CPP stands for: ___________________
   MNLF stands for: ___________________

4. The first Act giving parity rights to Americans was the ________________ passed by ___________________
   The second agreement was the ___________________ passed by ___________________.

5. The Philippine peso was originally worth two per U.S. dollar and is now worth _________ per U.S. dollar.

6. Philippine presidents Roxas, Magsaysay and Quirino had a common goal to ___________________.

7. Before Spanish colonization, _____________ was not owned by any individual.

8. ___________________ prefer to live in major cities than near their land.

9. ___________________ passed in 1947 which was helpful to the Philippines economy.
FILL IN THE BLANKS (cont.)

11. By the 1970s 75% of all Filipinos lived below the ________________.

12. Strikes by ____________________________ in the 1970s were the result of the oil crisis and rise in gas prices.

13. When Marcos declared __________________________ he deprived Filipinos of their personal freedoms.

14. HUKBALAHAP is short for __________________________ which stands for __________________________.

15. Name three programs the NDF and NPA would like to implement in rural areas of the Philippines:
   __________________________
   __________________________
   __________________________

16. Cory Aquino ran for president in 1986 as part of ______________ meaning __________________________.

17. Presidents in the Philippines had benefitted from ______________ in the 1936 constitution which gave them greater __________ power.

18. In 1946, the Philippines gained ______________ independence, but remained __________________________ dependent on the U.S.

19. The Military Bases Agreement with the U.S. expires in ____________.

20. During Marcos's presidency, he had a __________________________ built on a mountain top for __________________________.
MULTIPLE CHOICE—"THE PEOPLE'S REVOLUTION"

1. During the "People's Revolution," some members of the military secretly flashed:
   a. the peace sign
   b. the laban sign
   c. dollar bills

2. In February of 1986, the U.S.
   a. brought Marcos to Hawaii
   b. signed the Laurel-Langley Agreement
   c. established free trade
   d. signed the Military Bases Agreement

3. In 1986, Marcos called for:
   a. a nationwide jeepney strike
   b. the establishment of "Radio Veritas"
   c. a "snap election"
   d. a truce with the NPA

4. In 1984, this event was captured on national television:
   a. nationwide jeepney strikes
   b. Marcos's real estate investments
   c. the assassination of Benigno Aquino
   d. Imelda Marcos's trip to China

5. When the crowds went inside Malacanang Palace in Manila, they found
   a. gold
   b. jewelry
   c. 3,000 pairs of shoes
   d. "Radio Veritas"

6. The "People's Revolution" was unprecedented because
   a. it was non-violent
   b. it was world-wide
   c. Marcos declared it as the end of Martial Law
   d. it was a revolution of the upper classes

7. This expires in 1991:
   a. the Military Bases Agreement
   b. import controls
   c. Cory Aquino's term in office
   d. the Laurel-Langley Agreement
MULITPLE CHOICE (cont.)

8. Cory Aquino did not do this when she became president:
   a. reschedule loan payments
   b. pardon Marcos
   c. place a limit on how long the president could serve
   d. started preliminary negotiations with the Muslims

9. This was not believed to be a reason for the success of the "people's revolution":
   a. "Radio Veritas"
   b. the joining of all social classes
   c. Senator Claro Recto's speech
   d. divine intervention by God

10. Right-wing military advisors to Cory Aquino have continued to:
    a. have meetings with the CPP
    b. call Marcos in Hawaii
    c. maintain a strict presence at development sites
    d. run "Radio Veritas"

11. At Ninoy Aquino's funeral,
    a. 50 million people gathered
    b. 2 million people gathered
    c. 250 people gathered

12. During the "People's Revolution," "Radio Veritas"
    a. broadcasted stock market reports
    b. broadcasted a speech by Ferdinand Marcos
    c. broadcasted a speech by Cardinal Sin
    d. broadcasted from Malacanang

13. After Aquino became president, she experienced
    a. a visit from the Marcoses
    b. the decline of the peso
    c. many coup attempts

14. Aquino's vice-president is:
    a. Salvador Laurel
    b. Claro Recto
    c. Sergio Osmena, Jr.

15. Today, the NPA in the Philippines has
    a. a unit in every barrio
    b. 500,300 members
    c. a unit in every region
COMMUNISM VS DEMOCRACY

The debate between communism and democracy is complex. Both philosophies of government are diverse in their manifestation from country to country. Today, as world leaders begin to communicate more and the dividing line between the two ideologies becomes more vague, this debate is even harder to articulate. Part of the difficulty is that it is impossible to experience "pure" democracy or "pure" communism in any country of the world today. Rather, these are philosophies which have been developed and defined by great thinkers in history. They now serve as a basis for modern governments but are not evident as the same ideologies imagined by their founders.

Democracy is the system upon which the United States government is based. It is a system in which individuals have the freedom of speech and movement and in which there are at least two political parties, a House of Representatives, a Senate, a Supreme Court and a President. Democracy operates on a system of checks and balances between the various institutions. These checks and balances are what led to the resignation of President Richard Nixon in 1975.

However, the U.S. is also based on capitalism and growth of the economy through entrepreneurship. As heads of major corporations have become influential in the government, capitalism has often outweighed democracy in decision-making. Although freedom and equality for all is the ideal of democracy, economic levels have a great role to play in quality of education, health care and housing, as well as whether or not an individual can afford to run for public office. The presidency of the U.S. has almost exclusively been an office held by members of the upper levels of American society.

Communism can also be seen in various forms throughout the world. The political systems of both China and the U.S.S.R. are based upon the ideologies of communism. These countries experienced revolutions of the lower classes and working people or proletariat over previous systems of monarchy. In communism, the ideal is that all goods and money are distributed equally among all citizens. This involves an entirely new way of life, especially for the "intellectuals" and wealthier people. Because of this, in China, these two groups were under great attack during the revolution and many people, including teachers, scientists, poets, doctors, for example, were either killed or sent to camps where they would be re-educated.

Communism is very close to the ideal of socialism, a system in which health care, education, and money is distributed equally, without a revolution of the communist type. Such a system is found in the country of Sweden where there are no poor or homeless people, and the government sees to everyone's needs. Sweden, however, is a country much smaller than the U.S. and this makes a working socialist system much more manageable. People in Sweden also pay high taxes in return for their free medical care, education and other amenities, as well as the care for all their fellow citizens. They think of their government as a socialist democracy.

Added to these four intermingled ideologies—capitalism and democracy, communism and socialism is another factor—that of the "super-powers" of the U.S., and the Soviet Union. For the U.S., being a "superpower" means having financial control over large areas of the globe through multinational corporations. To insure this, the U.S. must maintain a huge military force which cost billions of dollars, as well as aid governments claiming to be "anti-communist" in countries where civil wars are being fought resembling communist-like "people's revolutions."

The Soviet Union has similar interests. Since its inception it has expanded its philosophy and control over large areas of Europe and sent aid
and weapons to countries such as Vietnam, Cambodia, and Laos which now have communist leaderships. Like the U.S., the Soviet Union needs money and influence over other countries to protect its position as a "superpower."

The Philippines is a good example of this situation. The original Communist Party of the Philippines had much contact with the Soviet Union, directly after Russia's revolution, which was led by Lenin. Later, the CPP followed the ideals of Maoist Communism which had recently taken control in China. To illustrate this, members of the CPP attached the following to the name of their party: "Marxist-Leninist-Mao TseTung Thought."

The government of the Philippines, on the other hand was given ample aid, supplies and advice from the U.S. to fight against what they called "communist insurgents" who fought primarily the countryside. The "problem" of Philippine Communism was first dealt with by General Douglas MacArthur in the period after World War II when communism was seen as a threat to U.S. interests.

In actuality, the concept of capitalism has dominated that of democracy in the Philippines. U.S. investments have been severely threatened by those who demand more land and rights for the lower classes. It is these working classes who lose out to multinational corporations which are backed by the Philippine government. Meanwhile, it is often actually "socialism" that is desired by "communists" in the Philippines—a socialism which gives more rights, land and percentage of the national wealth to the lower and working classes.

As in many countries in the world, the U.S. supports "anti-communist" governments which are not "democratic." These two philosophies are not necessarily tied together in such a way that one is the opposite of the other. While calling the Philippines a "showcase of democracy" and sending millions of dollars for "anti-communist" aid, the U.S. actually supported a government which had placed its citizens under martial law for 8 years, denying the people rights including that of free speech, habeus corpus, freedom of movement and the right to strike, which all guaranteed rights in a democracy.

Because the world has become smaller with highly developed communications all over the globe, multinational corporations now have a huge impact on the economies of many countries. Competition between various countries for manufacturing trade goods has made it necessary for U.S. corporations to start factories in many countries of the world in which low cost labor is available. By relying on the smaller economies of these countries, laborers can be paid far less than American workers and therefore their products can be sold at lower prices.

This is especially true in the Philippines. U.S. companies such as Scott Paper Products and Goodyear Tires rely on low cost labor in this country. It can be said that what is called U.S.-type democracy in the Philippines is vital to U.S. capitalism—-in a way which is detrimental to the Filipinos who are the low-cost laborers needed by the multinational corporations. These laborers, who make up a large portion of society, have, at various times, been involved with or influenced by those who identify themselves as communists and who fight actually are fighting for basic democratic rights. Therefore, when looked at within the context of Filipino position, it is no longer a debate between communism and democracy, but rather between U.S.-style capitalism and socialism, or the people's demands for their government to take a fresh look at how the economy and the government of the Philippines is managed.
COMMUNISM, SOCIALISM, DEMOCRACY, CAPITALISM

(Each of the following statements refers to one or more of the political ideologies listed above. Place the appropriate choice(s) in the space provided.)

1. The present government of China is:______________________________

2. Government system with high taxes but which sees to survival and health of all its citizens:______________________________

3. Operates on a system of checks and balances:______________________________

4. Ideology closely related to democracy in the U.S.:______________________________

5. Often thought of as anti-intellectual:______________________________

6. Belief that goods and money should be equally divided between all members of society:______________________________

7. Lenin was an important proponent of this philosophy:______________________________

8. Ideology behind multi-national corporations:______________________________

9. Has a two-party system:______________________________

10. Belief that all power in the country should be in the hands of the working class or proletariat:______________________________

11. These people believe that change can come to the Philippines only through armed struggle:______________________________

12. Marcos proposed martial law as his way to facilitate this:______________________________
13. Ideology most similar to communism: ________________________________

14. Ideology of the HKs: _____________________________________________

15. Present government of Sweden: ____________________________________

16. Belief in individual growth through entrepreneurship: __________________

17. Provides financial backing for anti-communist governments: __________

18. Douglas MacArthur was one of the first Americans to actively oppose this in the Philippines: ____________________________

19. Low-cost labour is important for the furthering of this ideology: _______

20. For many years, the U.S. called the Philippines a "showcase of": _______

21. Has a House of Representatives and a Senate: _________________________

22. The NDF of the Philippines wants this: ______________________________

23. In the Philippines, land reforms are usually supported by: ____________

24. Deccontrol of U.S. imports into the Philippines was most beneficial to this group: _________________________________

25. This is the ideology of the current government of the Philippines: ______

CHAPTER 6: THE PEOPLE OF THE PHILIPPINES TODAY

Introduction

Today, the Philippine archipelago is divided into 12 regions, with Greater Manila, or the metropolis of cities including and surrounding Manila, as a special 13th region. Each of these regions is divided into provinces and there are 71 provinces in all.

Agriculture, is the most important industry in the Philippines, and each region relies on this as well as other industries such as fishing and collecting marine life, industry, mining, and clearing forest land for timber. In the more urban areas, tourism boosts the economy as does the manufacturing of products which are mostly for export.

Major problems occur in the agricultural sector when large landowners use land for cash crops, including rubber, tobacco, coffee, abaca, pineapples, mangoes, coconut products, sugar, and palm oil. Cash crops are sometimes grown on land which is cultivated by tenant farmers who share-crop, meaning they earn a small percentage of what they grow, but the large majority of cash crops are grown on huge plots of land in areas such as Mindanao, and are usually owned by multinational corporations, such as Del Monte and Dole. If a majority of the land is used for these cash crops, there is little room for growing food crops which the local people need to survive. In addition, cash crops such as sugar eventually drain the soil of all its nutrients, leaving land which is useless for farming the most important crop in the Philippines which is rice.

As we will see, each area of the Philippines is as diverse as its land and people, their experience with colonization and development, their history as a group, and their economic position today. In this chapter, we will examine the people of the Philippines, concentrating on the ways in which the land and the people affect each other today, after two foreign colonization periods. Added to the complexities of history is the present situation of a world economy, in which the resources found in the Philippines play an important part.

The United States continues to be one of the largest investors in projects in the Philippines such as timbering, mining, and cash crops.

Development projects directly affect groups of cultural communities or non-Christian and non-Muslim Filipinos (also known as ethnic minorities or hill tribes). Due to the need for land for such activities as the damming of rivers to produce electricity, timber and mining operations and paper mills, many groups have been moved from their homelands.

Currently, deep strife between groups and individuals which has been heating up over the years has turned into frequent clashes fought among the Philippines Army, the Muslim Bangsa Moro Army and the Communist NPA (New People's Army). In parts of the archipelago, such as Mindanao, this has developed into religious fighting between Muslims and Christians, even though the problem is really over the shrinking acreage of land. Both the Bangsa Moro Army and the NPA try to protect the rights of the small farmer or the landless as well as the people who work in factories and mills.

Those in favor of development projects argue that the economy of the Philippines depends on these sources of income so that the Philippines can improve the style of living for all the people in the country by building roads, hospitals, and other infrastructure. Therefore, seeing Filipinos in all their varieties of religion, language, ethnicity, location, and economic status helps us to identify the possible problems and needs for development and modernization by the many different groups who make up this nation.
Regions of the Philippines

Region 1: Ilocos
Region 2: Cagayan Valley
Region 3: Central Luzon
Region 4: Southern Tagalog
Region 5: Bicol
Region 6: Western Visayas
Region 7: Central Visayas
Region 8: Eastern Visayas
Region 9: Western Mindanao
Region 10: Central Mindanao
Region 11: Northern Mindanao
Region 12: Southern Mindanao
The People of the Philippines Today

When the Spanish arrived in the Philippines in the late 1500s there were various societies or groups living in different areas throughout the archipelago. As we have shown with the Tagalogs, these people had developed their own languages, social and legal systems. Though they might have traded with members of other societies or groups and there may have been cases of intermarriages between groups, each was fairly independent.

The Spanish colonization resulted in the joining of these many groups into one nation of Filipinos, the majority of whom became Christians. These groups have managed to keep their individual languages and many of their unique characteristics, as well as their own special ways of practicing Christianity. For example, while all Christian Filipinos celebrate Easter in one area people actually volunteer to be nailed to a cross and carried in a procession. Other groups pay homage to certain saints, have certain important holy days or consider some places, such as mountains, to be especially holy.

Those who were able to resist Spanish colonization, primarily because they moved themselves into very remote areas, are today divided into two groups, the Moros, or Muslims, and the cultural communities.

Today many Christian Filipinos no longer stay in their villages but move about the archipelago to settle new areas when new opportunities for jobs or farming land appear. This means that Christian Filipinos now constitute the majority in most areas of the archipelago, even in places where, up into the 1950s, only cultural communities or Moros were found. This is mostly due to projects set up by the government throughout this century in which land was offered to Christian Filipinos in places like Mindanao after it became scarce in northern areas. Unfortunately most of this land, though it had been
claimed by the original inhabitants, was not officially "owned" by them, meaning that they lost their rights as soon as the government claimed ownership. Throughout the Philippines today, we can see that the Muslims and the cultural communities are becoming increasingly reactionary toward losing so much of their land in this way.

CHRISTIAN FILIPINOS

Christian Filipinos can be found in almost every area of the archipelago. However, each of the sub-groups discussed here most likely identify themselves with their own particular region and village, and therefore their unique heritage, which gives them a certain sense of identity in the increasingly homogeneous society in found the urban areas of the Philippines.

The Northern Philippines and Luzon

The Ilocanos are said to be the most industrious and therefore the wealthiest group of Filipinos. They are also known to migrate in large numbers from their home area of Ilocos (Region 1) to other parts of the archipelago and to the U.S., specifically Hawai‘i and Los Angeles. The greatest number of migrants simply go eastward into the mountainous areas of Abra, Benguet and Mountain Province, or to Manila. Because many Ilocanos migrate eastward their language, Ilocano, is known as "the language of the north," and is the third most widely spoken language of the Philippines. Whether or not each Ilocano fits the above description, these are some of the ways in which people of other groups commonly describe Ilocanos.

Ilocanos constitute about two-thirds of the population of Ilocos, and have a population around the archipelago of about 5 million people. They also
constitute 90% of the Cagayan Valley (Region 2) where many Ilocanos frequently move in search of new land and other opportunities.

While agriculture is the most important source of income, Ilocanos also fish along the coasts of Ilocos, have manufacturing companies, conduct mining, and produce salt in this region. Most Ilocanos migrate to other areas in order to find better land resources than are available on their narrow northwestern coast of Luzon.

Ilocanos are also associated with tobacco. This is because on the coastal plains of Ilocos, as well as in the Cagayan Valley, tobacco is an important cash crop. Both of these areas have been connected with Manila by good roads and railways for easy transport of goods such as tobacco.

Tobacco was introduced by the Spanish who fiercely regulated this cash-crop in order to have a monopoly. This monopoly was often undermined by the Kalinga and other groups of cultural communities who grew their own tobacco in remote areas and then sold it to traders in the Cagayan Valley bringing down the price. Today, there are two types of tobacco grown in Luzon, cigar tobacco which grows better in the Ilocos area, and Virginia cigarette tobacco introduced by American entrepreneurs, which grows best in the Cagayan Valley.

Since tobacco is such a big industry in Luzon it is one site of controversy between the landowners and workers.

Also found in Cagayan Valley is a smaller group, known as the Ibanag (population around 300,000) These Filipinos also take advantage of the fertile soil of the Cagayan Valley so that they can rotate four crops a year (peanuts, tobacco, corn and other vegetables) on their land relying on flooding from the wide Cagayan River to constantly provide the soil with new
nutrients. The Ibanags are mostly found in the provinces of Cagayan and Isabela.

The Tagalogs have always been considered the largest group of Christian Filipinos, although at present their numbers are about equal to Cebuanos. In Central Luzon, Region 3, the Tagalogs compose about 50% of the population, where they can be found in the provinces of Nueva Ecija, Bataan, and Bulacan. In the Southern Tagalog Region, Region 4 and the Bicol Region, Region 5, Tagalogs compose large parts of the populations of Camarines Norte, Laguna, Quezon, Cavite, Marinduque, as well as the urbanized center of the Philippines, Metro-Manila.

Tagalogs today engage in agriculture, mainly in the growing of rice, hemp for fiber cords, fruits and vegetables while also taking part in the manufacturing of shoes, steel, textiles, and coconut oil. Tagalog crafts such as wood carvings, rattan furniture, hats and shoes are well known world-wide as Philippine cottage industries.

Other large groups of Christian Filipinos found primarily in Central Luzon are the Pangasinians, in the province of Pangasinan. These people have a thriving fishing industry. They are known historically for their fierce fighting against the Spanish as early as 1571, as they had been influenced by Muslim traders. Today, there are almost a million Pangasinians.

Central Luzon is also the principle home to the Pampangos (population about 1.5 million) who make up about 25% of the population of this region, mostly in the province of Pampanga and surrounding areas. Pampangos in the central plains grow rice, sugar and vegetables and are able to fish in lakes and fishponds. When not involved in agriculture, some Pampangos take part in cottage industries which include mat-making and pottery-making.
Central Luzon is a very densely populated area of the Philippines. It is an area of fishing, agriculture and industry and has the two largest U.S. military bases in the archipelago, Clark Air Base and Subic Naval Base. In this mostly urbanized area manufacturing and shipping are the largest producers of income for the people. This area includes the provinces of Bataan, Pampanga, Zambales and Bulacan, all fairly densely populated.

The land of Central Luzon is fairly swamplly so that much of it has recently been developed into ricelands. Swamps and lakes have often also been set up as fishponds. This area is self-sufficient in its production of rice, corn, sugar and fruit, but must import meat and vegetables.

Historically, Central Luzon was the site of the HUK rebellions, and now is a major stronghold of the NPA (the New People's Army). As part of the Communist Party, the NPA fights for fairer wages and working conditions for the people employed in the many factories, the oil refinery and nuclear power plant in this region. In rural areas the NPA often uses guerilla war tactics against the Philippine Army and the private armies which have been created by land owners of large estates throughout Luzon. The purpose of this fighting is to try to achieve more land rights for the many people of Luzon who have lost their land to the more powerful landowners. Their goal is to improve the lives of these small-time farmers, however, in these rural areas when there is fighting going on the farmers and their families are still the ones who suffer the most.

Tagalogs live on the island of Mindoro and on the Bicol peninsula, throughout the southern Philippines and they also make up a large percentage of the inhabitants of Metro-Manila. Metro-Manila is actually located in the province of Rizal, which is part of Southern Tagalog Region, Region 4. This
metropolis includes the surrounding cities: Quezon City, Pasay City, and Caloocan City. Today, the population of Metro-Manila is around 8 million people. A form of the Tagalog language, called Filipino, has become the national language of the Philippines.

Malacañang Palace, the official residence of the President, is found in Manila, along with the heads of the major banks and corporations of the Philippines. Tourism is a big industry here, as is retail and construction of new hotels and office buildings. Metro-Manila is an area of contrasts between extreme wealth and poverty.

The Southern Tagalog region consists of previously rural areas which are now sites of growing industrialization. Many people migrate to the province of Mindoro Oriental on the island of Mindoro, and to the province of Rizal from outer areas to take advantage of the job opportunities created through development of new industries which which have spread south from Manila.

Mindoro, mostly populated by cultural communities until recently, is an area in which Christian groups have steadily increased. In this region, cash crops such as coffee, coconuts, pineapple and cotton are grown. Iron and copper are the minerals most mined in the mountainous areas, and the lakes in Mindoro are frequently fenced off as fishponds.

Mining has been a part of life in the Philippines since pre-colonial days. When the Spanish arrived, they were thrilled by the amounts of gold they saw worn and carried by the Tagalogs, and set about to increase the volume of gold mining. Gold is still mined in the Philippines as are other minerals and ores which have become important for the world's economy, including silver, nickel, iron, copper, platinum, lead, limestone and zinc which are found and mined in nearly every region.
Little is left in the way of relics from pre-colonial times, since most religious artifacts which were likely to be saved, were destroyed by the Spanish. However, in Bicol, (Region 5) specifically in the province of Masbate, many pre-historic polished stone tools have been found along with carvings from grave sites, giving important information and dates to archaeologists. These show archaeologists that an advanced level of economic development had been reached in the area from well before Spanish colonization.

Today, Bicol is a region composed of approximately 3 million Bicolanos who make up about two-thirds of the population, living in the provinces of Camarines Sur, Catanduanes, Albay and Sorsogon. Bicol also has a tobacco industry, and other cash crop industries including the growing of abaca for hemp. Many people also migrate from Bicol to areas throughout the archipelago to find work.

The Visayas

In the Visayas, there are three main regions, each with very different characteristics. The Western Visayas, Region 6, is the principal land of the Hiligaynon-speakers known to outsiders as Ilonggos, and has a population of more than 4 million people. Ilonggos are the fourth largest group of Filipinos, and their center is the city of Iloilo. Their top industry is fishing, and they are also known for their annual Ati-Atihan festival during which people dance wildly in the streets in remembrance of the time peace was made between the Ilonggo lowlanders and Negritos who once lived in the mountainous areas.

Sugar is the main industry on Negros. Because of this, people are brought to this area from other islands as migrant laborers for haciendas—
giant sugar plantations. The workers, known as sacadas, have a difficult life which revolves almost solely around seasonal trips to these haciendas where they are at the mercy of contratistas, (plantation managers) who often use their positions to take advantage of the sacadas by forcing them to incur heavy debts, just to get enough food to eat, or to pay for medical care in the case of injury or illness.

Many Cebuanos, from the island of Cebu, have emigrated to different areas of the Philippines, mainly Western Leyte, Eastern Negros and Northern Mindanao where one can find what seem like transported Cebuano communities. In fact, Cebuanos make up the majority of the populations in nearly every province of Mindanao today. There are in all more than ten million Cebuanos and Cebano is probably the most widely spoken language. Cebu City, the center of the larger Cebuano community, has been an international trading center since early Spanish times and is now a center for universities, tourism, shipping, and local crafts.

These crafts are also known as cottage industries or smaller scale industries and are practiced in the home, usually by the family. Cottage industries in the Philippines include the production of handmade clothing, pottery, furniture, musical instruments, such as ukuleles and guitars, coral and shell products, candies and pastries. Although these industries do not appear important in the greater economic picture in the Philippines, they are often a means for families and individuals to make their livelihood as well as being a source of local pride for people of the area.

The Warays of Samar and northeastern Leyte with a population of about 2 million, have been known in the past for their peg-boats. Spanish travellers noticed these boats which were only held together by pegs and strips of

-216-
rattan rather than nails. At first the Warays agreed to help the Spanish with boat-building, but later revolted against them. Like other Filipinos, many Warays migrate to Manila in hopes of finding better jobs and living conditions. One such person was Imelda Marcos. In Waray areas coconut is both a major food crop and major source of income. Other important crops include sugarcane, abaca, tobacco, coffee, and cacao and many people earn an income through fishing.

Because of the lack of good roads through Samar, most people travel by way of numerous large rivers which cut through the interior. Some changes in remote areas of Samar have occurred because of the Pan-Philippine National Highway, though it has mostly been used to transport military vehicles throughout the area. This highway makes it much easier for resources which come from Samar to be taken to the ports of Davao, in Mindanao and Legaspi City, in the province of Albay, an important port in Bicol. Most likely it means an increase in development projects in and around Samar in the future.

THE MOROS

In the Philippines, there are more than a dozen large ethnic groups which follow Islam, the religion of the Muslims. They have taken the name of Moro, a name first given to them by the Spanish and today, they are known as Moros or Muslim Filipinos.

Islamic religion demands a very different style of living than that practiced by most Filipinos, resulting in serious controversy and religious strife in Mindanao, the area where Muslim and Christian groups come into the most frequent contact. Problems between these two groups have more to do
more to do with land and resources than with religion. Since Christian Filipinos constitute the majority and Moros make up only about 6-7% of the population, power struggles over land and other rights eventually take on a religious identity. These power struggles are fought today between the Muslim Bangsa Moro Army, and the forces of the Philippines army, as well as individuals and small groups which are caught in the middle. Many Moros feel that they are fighting the jihad, or holy war described in the Koran. This "war" is more serious in some areas, while it results in small skirmishes or a feeling of fear and discontent in others.

Today, Muslim Filipinos practice a religion which is partly Islamic and partly indigenous Filipino. This religion involves a headman, or strong man, who is elected by the community because of his strength and intelligence and is the one responsible to and for his group. A head man usually makes decisions in the case of a disagreement, performs marriages and funerals, and protects his people against outsiders. His strength within his group depends on the loyalty of his followers.

Muslim Filipinos are not like Middle Eastern Muslims. What they do have in common is the Koran, the main text of their religion which outlines the civil aspects of life, including marriage and divorce laws, processes of education and property and criminal laws. Similar to the Christian Filipinos who have unique ways of practicing their religion which have become known as "folk Christianity", the Muslims of the Philippines practice a particular blend of local Filipino customs and their interpretation of the laws of the Koran.
The history of Islam in the Philippines is actually older than that of Spanish colonization with the first Muslims arriving in about 1300 AD, more than 200 years before the Spanish. By the time of the arrival of the Spanish, many groups of southern Filipinos had already been converted to Islam, and Islamic traders had started to move north through the archipelago. It is commonly thought that if Spanish had arrived 50-100 years later, the Philippines would have already become an Islamic nation, like Indonesia.

The first groups to come into contact with Muslim traders from other countries were the Maguindanao of the area of the Rio Grande de Mindanao area, the Maranao of Lake Lanao, and the Tausug who also intermarried with Muslim traders around 1450 AD, the time of the first Sultanate.

Both the Spanish and American colonizers spent a lot of time and effort fighting the Muslims and trying to gain control of the southern Philippines. The Spanish were never able to colonize this area, and their wars with the Moros there became an extension of the fighting between Spaniards in Spain and the Spanish Muslims of that period, known as the Moors.

The Spanish succeeded in creating an enmity between Christian Filipinos and the Moros which has lasted for four centuries. They did this by forcibly drafting Christian Filipinos into their armies. To retaliate, against these forces, the Moors would sail their boats up to the coasts of Luzon and randomly attack villages. From the beginning of these attacks up to the present, the Moros have the reputation of being violent, even fanatical. Attacks and counter attacks between the Moros and the Spanish, with their Filipinos troops lasted throughout the Spanish colonial era. This was the beginning of the Bangsa Moro Army.
During the American colonial period, the situation did not improve for the Moros. At one point a treaty was drawn up by the Americans and signed by the Sultan of Sulu, a Muslim leader of that time, which granted the Muslims a form of sovereignty. When the Philippines gained its independence, however, the new government was not in favor of Muslim sovereignty, and has tried to maintain control over the southern islands since then. In addition, because the Sultan of Sulu was the leader of only a small area, this treaty with the Americans caused a split to develop among the Moros—those who were pro-American and those who were anti-American.

The American plan for Mindanao and the Southern Philippines, was to conquer what they saw as a pioneer land, much in the same way they conquered the western lands of the American Indians. Their first goal was to "disarm" the Muslims. This meant taking away any knives or guns which were usually a typical part of Moro dress. After this, they attempted to get all the Moro children to go to school, even to the point of arresting parents who did not cooperate. Their final act against the Moros, as well as cultural communities who inhabited Mindanao, was to declare 12 million acres of land in this region as "public domain" meaning it was owned by the government. The government, then run by the U.S., was free to parcel out the land in 6-24 hectare homesteads to Christian Filipinos who began to move south to find new land. They also leased vast areas of land to the American rubber, sugar, and pineapple companies which are still there today, some on the same 99-year leases which were instituted at the beginning of this century. After Philippine independence, the new government continued with the "settling" of Mindanao. In 1954, under President Ramon Magsaysay, the NARRA or National Resettlement and Rehabilitation Administration provided this land for landless farmers and HUKs who
had surrendered.

The Muslims, like many cultural communities, did not practice the western form of individual ownership of land because all the land was owned by the Sultan, and was available for use for all Muslims. The same situation has existed in many parts of the Philippines, the only difference being that the land was controlled by the Raja, Datu or headman of the village. The land would then be parcelled out according to status and need, but never owned outright. Because they had no legal "deed" or "title" to the land the Muslims and cultural communities could not stop the loss of their land.

Although the NPA and the Bangsa Moro Army have the same kind of agenda, they do not work together in Mindanao, but rather find themselves in skirmishes of their own. This is probably due to the religious differences between the two groups, and the fact that the Muslims would like to have a nation which is completely separate from the Philippines.

Today, much of the land in the Southern Philippines is used by American owned rubber plantations, such as the B.F. Goodrich and Goodyear companies, as well as pineapple plantations and canneries owned by U.S. corporations such as Del Monte. In fact, large parts of Mindanao are now owned and controlled by multi-national corporations which hire Filipinos to fish for tuna, grow coconuts, and log timber as well as to work in sawmills, paper mills, and factories processing raw materials found in the area.

While some people predict that the Muslim community in the Philippines is shrinking it must be kept in mind that over the years, these religious groups have converted to Islam for various reasons. Sometimes being a Muslim in the Southern Philippines can mean better schooling for children, better business opportunities in the community, or just higher status.
The Sulu Archipelago

The Sulu Archipelago is a string of three major island groups and many smaller islands which stretch out from the west coast of Mindanao. It is one part of Western Mindanao, Region 9. In the past, Muslims and cultural communities shared this area, although now increasing numbers of Cebuanos and Chinese can be found in the area. The largest Muslim group in the Sulu Archipelago is the Tausug, with a population of about 335,000 people.

The Tausug produce copra, sweet potatoes and corn, as well as handicrafts which are shipped out to other islands in the Philippines and to Malaysia. One way they are unique is in the architecture of their houses which are made with nine poles to match nine parts of the human body, according to Tausug beliefs.

Other Muslims in the Sulu Archipelago include the Samal (pop. c.245,000), the Yakan (pop. c.50,000), and the Bajau (pop. c.4,000). The Bajau people spend most of their time on small houseboats, from which they fish and collect shellfish. Usually one nuclear family lives on a boat which hooks up with other boats of the extended family. When they land, the Bajau become part of a complex socio-economic network with their trading partners on the land—the Samal and the Tausug—in and around the urbanized trading capital of Jolo, on the island of Tawi-Tawi. Actually, it is difficult to say how many people belong to these various groups, as they often claim different identities at different times, depending upon who is questioning them. This is because of years of wars, skirmishes, and complex social patterns between people who live on shore, in boats, and in the uplands.
Mindanao

The two provinces of Zamboanga del Norte and Zamboanga del Sur have a population which is half Cebuano. Muslim groups who live here include some Samal and the Subanen as well as the Maguindanaos, who have an entire population of about 500,000 people, although not all of them live on the Zamboanga peninsula. The Maguindanaos live in the marshy areas near the Pulangi River (also known as the Rio Grande de Mindanao) in North and South Cotabato, and Sultan Kudarat. Because of their location, they are able to practice wet rice agriculture, as well as raise chickens, carabao and goats.

Other Muslim groups who live on Mindanao are the Maranaos (pop c.600,000), who live in the area surrounding Lake Lanao in Lanao del Norte and Lanao del Sur and practice wet rice agriculture. A central part of Maranao life is the community house, a typical focal point for Southeast Asian Muslims and a place where boys past the age of adolescence live until they get married. Two smaller groups of Moros in Mindanao are the Molbog (pop c.5500), and the Sangil (pop c.5500).

THE CULTURAL COMMUNITIES

The cultural communities, also known as "ethnic minorities", and "hill tribes" or "mountain people" are spread throughout the Philippines, and offer Filipinos a rich review of their past and origins. These people are extremely diverse from group to group. Some have recently had a lot of contact with foreign anthropologists and tourists and due to this their traditional ways have changed, as in the example of the Ralinga who, in the past decade, have stopped the ritual of "head hunting," once considered an important rite of passage from boyhood to manhood.

-223-
Today many members of different cultural communities are in bitter battles with development, because the same soil which is rich with minerals and ores or rivers which can be dammed and land which can be planted with cash crops is usually located on land which has been the home of these people for centuries. Since they are not joined by a single religion or political system like the Moros, cultural communities have not been very successful in fighting against growing development projects which are funded by major multi-national corporations.

Filipinos who support development projects feel that the economic growth for certain individuals or for the country as a whole should take priority over the rights of small groups of people to stay on their land, arguing that these people can easily be moved to another area. Unfortunately, when such groups are moved they lose cultural identity and their livelihood. In the Philippines, these problems are far from being resolved and members of minority groups find their present ways of life more and more endangered.

Luzon

In the mountainous provinces of Luzon, for example, which are part of both Ilocos and the Cagayan Valley, major rivers are being dammed to provide electricity for the southern cities, namely metropolitan Manila. These new dams which were started during the Marcos administration under the Chico Dam Project are the sites of much controversy. Many people who live in these areas were forced to move away from their homelands which were then flooded. The rivers being dammed include the Chico, Pampanga, Angat and Lubao Rivers. Some of the cultural communities who are affected by these projects in Ilocos and Cagayan Valley, include the Bontoc, Kankanai, Tinggian, and Ifugao.
The numbers of people in individual cultural communities vary widely. Most groups live in remote mountainous regions where they were able to avoid the Spanish colonists. Avoiding the Americans was more difficult, and since they have been the object of scrutiny by anthropologists from the U.S. and Europe, life has already changed for some groups. Three of these are the Kalinga (pop. 107,000) and the Ifugao (pop. 180,000) and the Ranikanai, (pop. 125,000), of the mountain provinces of Ilocos and the Cagayan Valley in Luzon. The Ranikanai and Ifugao are especially known for their woodcarvings which were previously made only for special religious purposes and under special conditions, but which now bring in revenue from tourists as cottage industries. The Ifugao also grow wet and dry rice and they fish.

The Kalinga of today also grow wet and dry varieties of rice. They hunt, using their own spears and hand axes, and work at such cottage industries as basket and decorative textile weaving and making pottery. Like many of the cultural communities living in Luzon, the Kalinga have for many years been the subject of study by anthropologists. Since they relinquished their practice of headhunting they now give speeches to demonstrate their skills in oratory and debate as an alternative way of proving their masculinity and their leadership qualities.

Also in Luzon, one can find the Bontoc (pop. 150,000) spread throughout most of Mountain Province in the Ilocos region as well as in parts of the Cagayan Valley. The Bontoc are especially known for their steep rice terraces on the sides of mountains which are considered one of the wonders of the world. Because transporting water was a problem in early times, the Bontoc created an elaborate irrigation system by terracing the sides of hills so that water travels down, rather than having to be carried up by workers.
In Northern Luzon, one can also find the Isneg, (pop. 20,000), who grow wet and dry rice, as well as fish, hunt, gather rattan and make wine, and the Tinggians (pop. 44,000) of Abra who manufacture tools, make baskets, practice weaving, pottery-making and fishing as well as agriculture. Other cultural communities in Northern Luzon are the Ibaloi (pop. 93,000), who are found in the province of Benguet.

Other sites in Luzon, in the Cagayan Valley Region and the Southern Tagalog Region, are the homes of the Gaddang (pop. 43,000), who live in the provinces of Isabela and Nueva Viscaya and who are farmers and raise carabao, the Ikalahan (pop. 30,000) in Nueva Viscaya, the Ilongot (pop. 28,500) who live in Nueva Viscaya, Nueva Ecija and Quirino, and who practice, hunting, farming and fishing; and the Isinai (pop.27,390).

In the Southern Tagalog Region, the cultural communities live in the mountains of Mindoro, include the Iraya (pop. 35,000), the Alangan (pop. 13,500), the Tao Buhid (pop. 36,000), and the Hanunoo-Mangyan (pop. 20,000). All these groups live in the mountainous areas which separate Mindoro Occidental and Mindoro Oriental. Most of them practice swidden cultivation while the Tao Buhid and the Iraya also pan for gold. The Hanunoo-Mangyan are known for writing poetry and messages on bamboo and tree-trunks or trail posts. Because these materials decompose easily, important poems from long ago are constantly recopied, carrying on a tradition of hundreds of years. This poetry is written in their own script, which has 17 basic characters original to this group, though they were probably influenced by the scripts of traders from earlier times. About 70% of Hanunoo-Mangyans can read this script.

Other groups on Luzon include the the Agta, a hunting-gathering-fishing
group living in the southeastern provinces of Camarines Norte, Camarines Sur, Quezon, Albay and Sorsogon, the Negritos from Tarlac, Pampanga and Zambales, and the Remontado of Rizal and Quezon.

Palawan and the Visayas

The cultural communities who live on the island of Palawan are the Tagbanua (pop. 60,000), the Bataks (pop. 6,850), the Kalамиanes (pop. 2,750) of the Calamaine Islands north of Palawan, the Palawanis (pop. 60,000), and the Ken Uy (pop. 1,200) of Cuyo Island. The Bataks have perfected the art of hunting and gathering with the poisoned dart, the blow gun, and the bamboo spear. They also collect rattan and resin in the forests so that they can trade these items with lowlanders for cloth, salt, rice, and metal implements. The Tagbanua are accomplished hunters who use 45 different kinds of traps. They also grow rice, vegetables and taro.

Most of the members of these groups on Palawan have been able to maintain their traditional life-style, due in part to their distance from the rest of the archipelago. More recently, however, in addition to the in-migrations of Christian Filipinos, has come the problem of timber cutting, which, when not done with extreme care results in deforestation and erosion.

Timber is one of the largest markets in the Philippines. Mountainous areas yield dark hardwoods which are strong and durable, and are popular in the U.S. and Europe where mostly lighter woods are found. The timber-industry depends on the plan for the planting of new trees so that the supply of timber will be continuous. If this is not carefully planned the land can be wiped away by erosion and rendered useless. Massive cutting of timber, or deforestation, has already affected the Philippines on a large scale. Mountain dwel-
lers are naturally affected by timber cutting, but lowlanders also suffer from the subsequent flooding. Deforestation is a major problem throughout the Philippines, and its effects on the environment may not be completely understood until the damage is well advanced.

This has also been a problem in much of the Visayas, where 30% of the Philippine population lives and farms. Some remaining areas which are still the sites of thick forests and isolated conditions are the upland areas of Negros and Panay, homes to the Ati (pop. 7,000), and lands in Samar and Leyte where part of the Mindanao population lives.

Mindanao

Sixty-five percent of the land on this island is considered to be public forest, which means it is owned by the government and therefore can be sold, leased or given out as homesteads in ways which the government determines. Large portions of this land were previously the homes of many Moro groups and Cultural Communities. Today, the farming of cash crops, mining and logging are big industries in Mindanao. On this island, for example, there are 47 logging companies and nine mining companies. There are also a number of companies, the largest of which is Castle and Cooke, which grow pineapples, sugarcane, rubber or other cash crops. The jobs created by these companies, as well as the parcelling out of a lot of land to Christian homesteaders has caused the population to increase tremendously. In the area of Davao City, people immigrated at a rate of 3,000 a month between the years 1948 and 1960. This immigration was enhanced by the completion of the Philippines National Highway which goes through the Agusan Valley south to Davao City. As a result of this the highland population of cultural communities dropped from 82,000 in the
1940s to 17,000 in the 1960s.

The same situation is found in Central Mindanao, where by 1960 the Christian population had already reached 55% (constituting a majority). Nevertheless, the island of Mindanao has the greatest concentration of cultural communities, many of whom do not live in one particular region. Because of the growing populations, however, many live in thinly scattered groups in the more inaccessible forest lands. For example, the Manobo, (pop. 249,000), live in the provinces of Agusan del Norte, Agusan del Sur, Surigao del Norte and del Sur, Bukidnon, North and South Cotabato. The Manobo practice shifting cultivation which means that they frequently move within the mountainous areas.

Similarly, the Higaonon (pop. 172,000), also known as the Bukidnon are stretched across Agusan del Norte and del Sur, as well as in Bukidnon, and Misamis Oriental and Occidental. They practice dry agriculture, with corn as a staple crop, raise chickens and pigs, hunt deer, cultivate abaca and gather rattan.

Also found in the northern parts of Mindanao are the Mamarwa (pop. 9,000), in Surigao del Norte, Agusan del Norte, Samar, and Leyte. This Negrito group practices shifting agriculture, and traps animals. When an animal is caught, the head is given to the one who caught it and pregnant women get a larger share than the others.

Among the larger groups of cultural communities, are the B'laan (pop. 244,000) in the Cotabato regions and in Davao del Sur and Sultan Rudarat. The B'laan practice swidden cultivation as well as hunt and farm, raising chickens, pigs and horses. They are known for their intricately embroidered clothing and body ornaments. The Subanon (pop. 311,090), also have a relatively large population, and practice dry-agriculture in Misamis Occidental, and

-229-
Zamboanga del Norte and del Sur. Another large group is the Mandaya or Mansaka (pop. 300,000), of Davao del Norte and Davao Oriental, who practice swidden cultivation, hunting, and fishing.

When they compose such a small minority of Filipinos, (about 10%), it is frequently asked why is there such a concern about the welfare of the the cultural communities and the Moros. The argument in the minds of the majority of Filipinos stems from the fact that, with an economy which is as weak as that in the Philippines, the valuable products taken from land upon which these people live are essential for the future growth of the Philippines. Why, then cannot these Moros and cultural communities be assimilated into Filipino culture as all the other individual groups have been?

These difficult questions are an integral part of the problems faced by the Philippines today. Members of cultural communities feel they have the right to live the way they always have, on the land they always considered their own. Likewise, Moros feel they have the right to practice Islam on the land they have considered their own for centuries. However, the condition of today's Philippines economy puts groups such as these in a precarious position.

Their future is uncertain. Recently, some legislation has been passed which aims at protecting these groups, but it will take more than the passage of a few bills to change 400 years of historical development, especially the mutual enmity between the Moros and the Christian Filipinos.

1. Two groups who fight against the use of land for development projects are: ___________________________ ___________________________

2. ___________________________ is celebrated yearly by the Illongos to commemorate peace.

3. Family businesses which involve handicrafts and other goods made at home are called ___________________________.

4. Deforestation results in ___________________________ in upland areas and ___________________________ in the lowland areas.

5. ___________________________ is known as the "language of the north."

6. Before Central Luzon was a major focus for the NPA, it was the site of the ___________________________.

7. Metro-Manila is located in the province of ___________________________, in the ___________________________ Region.

8. A lot of the Eastern coast of the Philippines, including Samar, the Bicol peninsula, and Davao City have recently been affected by the ___________________________.

9. During American colonization, the ___________________________ signed an agreement with the U.S. which granted sovereignty to some Muslims.

10. Tausug houses have nine poles to represent what they believe are the nine ___________________________.

11. 30% of Filipinos live and farm in the ___________________________.

12. The number of cultural communities in the area of Davao City dropped from ________ in the 1940s to ________ in the 1960s.

13. The ___________________________ are known for their intricately embroidered clothing and ornaments.
14. In one area of the Philippines, at Easter, some people volunteer to

15. Many swamps and lakes in the Philippines are fenced off into

(16-20 choose three of the four terms to use to fill in the blanks in the appropriate places)

16. sacada mayores haciendas contratista
The sugar business in Negros is carried out on large estates called
_________________________ which are run by managers also known as ______________________ while most of the work is done by
_________________________ who are migrant laborers.

17. cultural communities Christians Muslims Chinese
Mindanao was principally the home of the ______________________, some of whom intermarried with ______________________ in the 15th century. Today, however, the majority of people here are ______________________.

18. hemp nails rattan pegs
The Waray were known for their boats which were put together with ______ rather than __________ and held together with strips of ________.

These three Cultural Community groups are found on three separate islands in the Philippines. The ______________________ are found on Luzon, Palawan is home to the ______________________ and the ______________________ live in Mindanao.

20. guerilla war tactics Philippines Army troops NPA private armies
In Luzon and Mindanao, the ______________________ uses ______________________ against the ______________________ who protect large estates.
General Questions

1. Name 4 multinational corporations which do business in the Philippines:

   ____________________________________________
   ____________________________________________

2. List eight cottage industries practiced in the Philippines:

   1. ____________________________ 5. ____________________________
   2. ____________________________ 6. ____________________________
   3. ____________________________ 7. ____________________________
   4. ____________________________ 8. ____________________________

3. Three major categories of Filipinos:

   ____________________________________________

4. Metro-Manila includes these surrounding cities:

   ____________________________________________

5. Three duties of a Moro headman are:

   ____________________________________________
   ____________________________________________
   ____________________________________________

6. Three articles for hunting of the Batak of Palawan are:

   ____________________________________________

7. Name three development projects currently under way in the Philippines:

   ____________________________________________
   ____________________________________________
   ____________________________________________

8. Give two reasons that development projects are seen by many Filipinos as necessary:

   ____________________________________________
   ____________________________________________
MULTIPLE CHOICE QUESTIONS

1. **jihad** for Muslims means:
   a. holy war  
   b. head man  
   c. land rights

2. U.S. military officers likened American rule in Mindanao to
   a. the civil war  
   b. the conquering of American Indians in North America's west  
   c. the Japanese occupation of World War II

3. Land which is "public domain" is:
   a. national forest  
   b. a street or highway  
   c. land owned and controlled by the government

4. In Luzon, cultural communities are most affected by:
   a. malaria  
   b. growing rubber plantations  
   c. nuclear power plants  
   d. the damming of rivers for hydro-electric plants

5. The following is NOT a cottage industry
   a. candy  
   b. ukuleles  
   c. rattan furniture  
   d. tires

6. This caused a split between Muslim groups during U.S. colonization:
   a. disarmament of the Muslims by the U.S. military  
   b. a treaty between the Sultan of Sulu and the Americans  
   c. opposing interpretations of the Koran between the Sultan of Sulu and the Moors

7. Choose the place which has NOT experienced a wave of immigration in this century:
   a. Davao City  
   b. Ilocos  
   c. Palawan  
   d. Central Mindanao

8. Hemp comes from:
   a. abaca  
   b. gold  
   c. pineapples  
   d. Benguet Pine
9. Ilocanos are NOT:
   a. known for their poetry written on bamboo
   b. more likely to emigrate to Hawai'i or Los Angeles
   c. 90% of the population in the Cagayan Valley

10. The New People's Army is part of this organization:
    a. Communist Party
    b. The Spanish
    c. The Moros
    d. The Philippines government

11. A hectare equals about:
    a. 2 1/2 miles
    b. 2 1/2 acres
    c. 1 1/2 acres

12. This is a major threat to Palawan today:
    a. corruption
    b. deforestation
    c. pollution
    d. over population

13. This is the largest language-group in the Philippines:
    a. Tagalog
    b. Cebuano
    c. Hiligaynon
    d. Ilocano

14. The first Muslim traders arrived in the Philippines about:
    a. 1575 AD
    b. 10,000 years ago
    c. 1450 AD
    d. 1300 AD

15. Copra comes from:
    a. sugarcane
    b. abaca
    c. coconut
