About

The Story

Living in Hawai‘i, you are going to find yourself in a sunny environment almost every day. Hiking, running, riding bikes, swimming, the list of activities are endless. Attending the beach is a common activity among friends and family. When partaking in these beach activities, individuals need to protect their skin with sunscreen as a basic health need. However, there have been significant negative impacts on ocean life, ocean water health, and coral reefs due to chemicals found in commonly used sunscreen. Therefore, adults living in Hawai‘i have a responsibility to taking care of it’s environment. The health of Hawai‘i’s ocean and coral life have direct impact on the environment outside of the ocean. Therefore, adults living in Hawai‘i need to know their impact in hopes of changing their actions for the future. The next few pages allow you to explore links to help you understand everything you need to know.
