

A Systematic Catalogue of Australian Braconidae

ARTHUR W. PARROTT¹

INTRODUCTION

IT HAS BEEN 60 YEARS since a list of the Braconidae of Australia was published, excepting the world lists compiled by Dalla Torre (1898) and Szépligeti (1904). In 1891, Froggatt published his "Catalogue of Described Hymenoptera of Australia" in which he lists eight species of braconids. Nine years later Dalla Torre's world catalogue appeared in which he records 28 species from Australia and Tasmania. As far as the Australian fauna is concerned, there are errors and omissions which diminish the value of this great work, and in the present catalogue it is referred to only when the nomenclature of a species is affected. For example, Dalla Torre does not mention Guérin's genus *Trachypectus* and records *Bracon bicolor* Brullé from Africa and *Myosoma mutator* Fabr. from America. The next list was published in Szépligeti's "Genera Insectorum," Parts I and II, which appeared in 1904. While Szépligeti was preparing this work, he was actively engaged in a study of the Australian fauna and thus added greatly to our knowledge of this group. He lists 37 species from Australia and Tasmania. The present list records 224 species from Australia and Tasmania.

Unquestionably the taxonomy of the Braconidae is rather confused. Further studies will undoubtedly result in much more synonymy and in the resurrection of some species and genera now suppressed. The great diversity of species occurring in Australia and neighbouring regions necessitates an enormous

amount of work before a proper arrangement of species and their synonymy can be formulated. The arrangement of the genera and higher groups, in the present catalogue, is substantially that used by Muesebeck (1951: 90-184).

For the majority of species listed, I have had access to the original works, but those that were not available to me I have checked with other authors and in the Zoological Record. In compiling the synonymy of the older species, especially those of Fabricius and Brullé, and of the several more or less cosmopolitan species, a complete bibliography is not given, but invariably the original reference, together with all subsequent references where nomenclature is affected, is included. All references are included when a fuller description or figures are given, or when reference is made to the host or distribution of the species concerned. At the end of the catalogue is a list of beneficial species introduced and liberated for purposes of biological control. Established aliens, accidentally introduced species, and those occurring naturally outside the Australian area are given in the body of the catalogue with an indication of their distribution outside Australia. A host index is included as well as a general index, listing all subfamily, generic, specific, and subspecific names included in the catalogue.

Every endeavour has been made to make this catalogue as complete as possible; nevertheless, there may be omissions, and perpetuations of errors occurring in early records, and subsequent authors' corrections may have been overlooked, but it is hoped that such errors have been reduced to a minimum.

¹ Entomologist, Cawthron Institute, Nelson, New Zealand. Manuscript received March 1, 1952.

HISTORICAL

The history of Australian braconid systematics may be divided conveniently into four major periods of activity, namely, 1777 to 1890, 1891 to 1913, 1914 to 1927, and 1928 to 1951.

First Period 1777–1890.

Australian braconid systematics commenced with the publication of the description of new species by Fabricius in 1777, and was ably carried on by Brullé in 1846. Other workers who described Australian species during this period were Erichson, Guérin-Méneville, and Holmgren. During this period, 15 species were described from Australia and Tasmania. Fabricius worked on the collections made by Banks and Solander, naturalists on the "Endeavour" during Cook's voyages. These early Australian species were collected by Banks and Solander on the return journey of the "Endeavour" to England after observing the transit of Venus at Tahiti. The "Endeavour" was in Australian waters from April to August, 1770, and, according to Musgrave (1930: 190), the insects were mostly captured around Botany Bay and the east coast of Australia. From this material, four species of Braconidae were described, and the types are in the Banksian Collection in the British Museum. It was not until 1824 that the next braconids to be described from Australia were obtained during the voyage of the "Coquille", commanded by L. I. Duperrey. Lessen and Garnot were the naturalists, and the insects were later described by Guérin-Méneville. A footnote (a) by Musgrave (1930: 194) states "In Duperrey's 'Voyage autour du Monde . . . sur . . . La Coquille, pendant les Années 1822–1825.' The plates, with the scientific names of the insects appeared between 1827–1832, but the text did not appear until 1838."

Erichson described a species from Tasmania in 1841. Five years later, Brullé (1846) described eight species from Australia and Tasmania in his great work "Histoire Naturelle des Insectes." A specimen collected at Sydney,

New South Wales, was described by the well-known European hymenopterist Holmgren in 1868. No further species were described during this period. Thus, 15 species of braconids were known from Australia and Tasmania to 1890.

Second Period 1891–1913

This period may conveniently begin with the publication of Froggatt's "Catalogue of Described Hymenoptera of Australia," in which he lists eight species of braconids from Australia (actually 15 species were known at this time). During the 22 years covered by this period, Ashmead, Froggatt, Cameron, Szépligeti, Bingham, and Kokujew contributed to the knowledge of the Australian members of this family. Szépligeti, between the years 1901 and 1908, played the most prominent part.

A German expedition collected a number of insects in southwest Australia in 1905 which later were described by specialists in "Die Fauna Südwest-Australiens. 1907–1910," in which Szépligeti (1908) described the Braconidae.

Third Period 1914–1927

The works of R. E. Turner (1917–27) dominate this period, although those of Froggatt, Fullaway, and Baker must be mentioned. The period closes with the publication in 1926 of Baker's work on the Australian and Philippine Cheloninae.

An expedition, headed by Dr. E. Mjoberg, traveled into Queensland and northwest Australia. The Braconidae were described by Roman (1915).

Fourth Period 1928–1951

During this period a great amount of important revisional work was undertaken, principally by Wilkinson, on the Microgasterinae; this work was ably continued by Nixon. These authors dealt with the faunas of large regions and placed the systematics of Australian Braconidae on a sound basis in indicating their relationship with other faunas.

The works of Wilkinson and Nixon in England and Muesebeck in the United States have undoubtedly contributed toward a sounder knowledge of braconid systematics generally, and their work forms a basis for a clearer interpretation of the Australian forms in particular.

Other workers have contributed to the knowledge of the Australian braconid fauna, but those mentioned have made the principal contributions.

ACKNOWLEDGMENTS

To Dr. Leonard Tuthill, Professor of Entomology, University of Hawaii, Honolulu, I want to convey my very sincere thanks for suggestions on the layout of this catalogue; without his kindly co-operation this work would not have been completed.

To Dr. David Miller, Director, and Mr. L. J. Dumbleton, Senior Entomologist, Entomological Research Station, Nelson, New Zealand, my thanks are due for helpful suggestions during the final stages of preparation of this catalogue.

To Miss Shirley Armstrong, Librarian, Entomological Library, Cawthron Institute, Nelson, New Zealand, I am indebted for her untiring efforts in tracing references and obtaining publications.

To Mr. G. E. J. Nixon, British Museum (Natural History), London, Mr. Anthony Musgrave, Entomologist, and Mr. G. Gross, Assistant Entomologist, Australian Museum, Sydney, go my thanks for the literature which they supplied.

To Mr. Frank Wilson, Principal Research Officer, C.S.I.R.O., Canberra, Australia, I am indebted for the list of introduced Braconidae.

To Dr. Rene Malaise, Natural History Museum, Stockholm, my thanks are due for a list of Roman's types and other Australian species in the collections of the Museum.

ABBREVIATIONS OF MUSEUMS

The following abbreviations are used in giving the location of types of Australian Braconidae.

B.M.	British Museum of Natural History, London
H.D.O.M.	Hope Department, Oxford Museum, Oxford.
H.E.S.	Hawaii Entomological Society Collections, Honolulu.
N.C.A.C.	National Collections of Australia, Canberra.
N.H.M.	National Hungarian Museum, Budapest.
N.H.M.S.	Natural History Museum, Sweden.
N.H.M.V.	Natural History Museum, Vienna.
N.K.	Location not known.
S.C.M.G.	Saussure Collection, in Museum, Geneva.
U.S.N.M.	United States National Museum, Washington.

Order HYMENOPTERA

Suborder APOCRITA (= CLISTOGASTRA)
Superfamily ICHNEUMONOIDEA

Family BRACONIDAE

Subfamily APHIDIINAE

All members of this subfamily are internal parasites of aphids.

Genus DIAERETUS Foerster, 1862

rapae (Curtis)

Curtis [*Aphidius*] (1855, 2: 194) ♀ descr.
Ashmead [*Lipolexis*] (1900: 353) Austr. rec-
ord.

Froggatt [*Lipolexis*] (1907: 87) noted.

Cameron [*Lipolexis*] (1912: 197) Austr. rec-
ord.

Smith (1944: 101) syn., descr., fig.

Loc: Victoria; New South Wales.

Hosts: *Rhopalosiphum pseudobrassicae*
(Davis).

Mysus persicae (Sulz.).

Brevicoryne brassicae (Linn.).

Type: N.K.

Note: This European species is now well established in at least the southern

states of Australia and also in New Zealand.

Genus **EPHEDRUS** Haliday, 1833

persicae Froggatt

Froggatt (1904: 611) ♀ descr.

Froggatt (1907: 86) note, fig.

Froggatt (1910: 342) host, fig.

Loc: New South Wales.

Host: Peach aphid.

Type: N.K.

Note: This species is probably a European species that has become established in Australia.

Subfamily **EUPHORINAE**
(= *Meteorinae*)

The members of this subfamily attack a wide range of hosts, but all species are internal parasites.

Genus **ARIDELUS** Marshall, 1887

(= *Helorimorpha* Schmied., 1907)

exiles (Turner)

Turner [*Helorimorpha*] (1927: 558) ♂ descr.

Loc: Mackay, Queensland.

Type: B.M.

Genus **METEORUS** Haliday, 1835
(= *Protelus* Foerster, 1862)

. Most species of this genus are parasitic on lepidopterous larvae, but some are known to parasitise Coleoptera.

antipodalis Ashmead

Ashmead (1900: 353) ♀ descr.

Loc.: New South Wales.

Type: U.S.N.M. (No. 4908).

bicolor Szépligeti

Szépligeti (1905: 53) ♀ descr.

Loc: New South Wales.

Type: N.H.M.

dumbletoni Muesebeck

Muesebeck (1939: 172) ♂ ♀ descr.

Dumbleton (1940: 325a) host, biol., distr.

Loc: Hobart, Tasmania.

Host: *Tortrix postvittana* Walk.

Type: U.S.N.M. (No. 53341).

lutens (Cameron)

Cameron [*Protelus*] (1911: 341) ♀ descr.

Loc: Sydney, New South Wales.

Host: *Teara* sp. [Notodontid.].

Type: B.M.

Genus **PERILITUS** Nees, 1818

(= *Dinocampus* Foerster, 1862)

The species of this genus are internal parasites of adult Coleoptera.

coccinellae (Schrank)

Schrank [*Ichneumon*] (1802, 2: 310) ♀ descr.

Nees [*Bracon terminatus*] (1811: 26) ♀ descr.

Nees [*Perilitus terminatus*] (1834: 30) ♂ ♀ descr.

Dalla Torre (1898: 122) listed.

Szépligeti [*Dinocampus terminatus*] (1904: 175) listed.

Timberlake [*D. terminatus*] (1918: 401) Austr. record.

Cushman [*Dinocampus*] (1922: 242) syn.

Muesebeck (1951: 101) syn., listed.

Loc: Queensland. This species is nearly cosmopolitan.

Hosts: *Hippodamia convergens* Guer.

H. 5-signata (Kby.).

Coccinella californica Mann.

Coleomegilla maculata (Deg.).

Cycloneda sanguinea (L.).

C. trifasciata juliana Muls.

Type: N.K.

Subfamily **MACROCENTRINAE**

Internal parasites of lepidopterous larvae.

The gregarious forms seem to be polyembryonic.

Genus **MACROCENTRUS** Curtis, 1833

(= *Amicroplus* Foerster, 1862)

(= *Fhogra* Cameron, 1901a)

ancylivorus Rohwer

Rohwer (1923: 56) ♀ descr., N. America.

Loc: Liberated in Goulburn Valley, Victoria.

Host: *Grapholita molesta*, Busck. [Olethreutid.].

Type: U.S.N.M.

rubromaculatus (Cameron)

Cameron [*Fhogra*] (1901b: 104) descr., New Zealand.

Wilkinson [*Amicroplus tasmanicus*] (1928b: 265) descr. [New synonymy].

Loc: New Zealand; Longford, Tasmania.

Host: *Argotis* sp. (or allied Noctuid).

Type: B.M.

Subfamily *HELCONINAE*

The species of this subfamily, with few exceptions, appear to be parasitic on wood-boring coleopterous larvae.

Tribe *HELCONINI*Genus *AUSTROHELCON* Turner, 1918**australisans** (Kokujew)

Kokujew [*Helcon*] (1901: 15) ♂ descr.

Szépligeti [*Aspidocolpus*] (1904: 152) listed.

Turner (1918d: 165) nomencl., note.

Loc: Tasmania (Kokujew); New South Wales (Turner).

Type: N.K.

erythrocephalus Turner

Turner (1918d: 167) ♂ descr.

Loc: Victoria.

Type: B.M.

indultor (Erichson)

Erichson [*Helcon*] (1842: 258) ♂ descr.

Dalla Torre [*Helcon*] (1898: 84) listed.

Szépligeti [*Helcon*] (1904: 151) listed.

Turner (1918d: 165) nomencl., note.

Loc: Tasmania.

Type: N.K.

inornatus (Kokujew)

Kokujew [*Helcon*] (1902: 15) ♂ descr.

Szépligeti [*Aspidocolpus*] (1904: 152) listed.

Turner (1918d: 165) nomencl., note.

Loc: Australia.

Type: N.K.

meridionalis Turner

Turner (1918d: 167) descr.

Loc: Victoria.

Type: B.M.

Genus *CALOHELCON* Turner, 1918**obscuripennis** Turner

Turner (1918d: 165) descr.

Loc: Victoria.

Type: B.M.

Genus *HELCON* Nees, 1814 (1812)

(= *Gymnoscelus* Foerster, 1862)

rufithorax Turner

Turner [*Gymnoscelus*] (1918d: 170) descr.

Turner (1918a: 110) note, key.

Loc: Sydney, New South Wales.

Type: N.H.M.

unimaculata Turner

Turner (1918a: 111) ♂ descr., key.

Loc: Kuranda, Queensland; Sydney, New South Wales.

Genus **AGATHIS** Latreille, 1804(= *Bassus* Fabr., 1804)(= *Microodus* Nees, 1814)

The two species described by Brullé in 1849 are listed under this genus, but it is doubtful whether they are typical *Agathis*. In 1918 Turner (p. 110) stated "as far as I am aware typical *Agathis* does not occur in Australia." Brullé's species may probably belong to *Agathiella* Szépl. Muesebeck (1951: 117) synonymises *Microodus* Nees, 1814 (1812) with *Agathis* Latr., 1804, and the four species described by Turner under *Microodus* are listed here under Latreille's genus.

Genus **PHANEROTOMA** Wesmael, 1838

australiensis Ashmead

Ashmead (1900: 354) ♀ descr.
Roman (1915: 17) ♂ descr., noted.
Loc: Broome, W. Australia (Roman).
Type: U.S.N.M. (No. 4904).

leeuwinensis Turner

Turner (1917: 247) descr.
Loc: Australia.
Type: B.M.

Genus **SIGALPHUS** Latreille, 1802

conjugator (Turner)

Turner [*Sphaeropyx*] (1917: 245) descr.
Loc: Australia.
Type: B.M.

tripartitus Szépligeti

Szépligeti (1905: 43) descr.
Loc: New South Wales.
Type: N.H.M.

Subfamily **OPINAE**

The species of this subfamily are, with few if any exceptions, parasitic on Diptera. Some species are important in the biological control of fruit-flies.

Genus **OPIUS** Wesmael, 1835

Refer to Muesebeck (1951: 153) for the generic synonymy.

albimanus Szépligeti
Szépligeti (1905: 54) descr.
Loc: New South Wales.
Type: N.H.M.

brevicaudis Szépligeti

Szépligeti (1905: 25) descr.
Loc: New South Wales.
Type: N.H.M.

carpocapsae (Ashmead)

Ashmead [*Diachasma*] (1900: 357) descr.
Szépligeti [*Diachasma*] (1904: 162) listed.
Loc: New South Wales; New Zealand.

Host: Probably *Dacus tryoni* (Froggatt) (Trypetid.).

Type: U.S.N.M. (No. 4914).

deeralensis Fullaway

Fullaway (1950: 65) descr., host.
Fullaway (1951: 244) note.
Loc: Deeral, Queensland.
Host: *Dacus laticaudus* Hardy.
Type: H.E.S.

fijiensis Fullaway

Fullaway (1950: 67) ♂ ♀ descr., host, recorded Australia.
Fullaway (1951: 244) descr., host.
Loc: Australia; Fiji; New Caledonia.
Host: *Dacus* sp.
Type: H.E.S.

froggatti Fullaway

Fullaway (1950: 67) descr., host.
Fullaway (1951: 250) note.
Loc: Deeral, Queensland; Atherton Tableland.
Host: *Dacus* sp.
Type: H.E.S.

kraussi Fullaway

Fullaway (1951: 249) ♂ ♀ descr., host.
Loc: Deeral, Queensland.
Host: *Dacus laticaudus* Hardy.
Type: H.E.S.
Note: Reared in Hawaii from fruit-fly pupae collected in Australia.

perkinsi Fullaway

Fullaway (1950: 66) descr., host.
Fullaway (1951: 244) listed, host.
Loc: Deeral, Queensland.
Host: *Dacus laticaudus* Hardy.
Type: H.E.S.

persulcatus (Silvestri)

Silvestri [*Biosteres*] (1916: 167) descr.
Fullaway (1950: 67) note, Australian record.
Loc: Australia.
Host: *Dacus* sp.
Type: N.K.

tryoni Cameron

Cameron (1911: 343) ♂ descr.
Gurney and Gallard (1910: 428) noted, fig.
Fullaway (1951: 243) noted, host.
Loc: New South Wales.

Hosts: *Dacus laticaudus* Hardy (Trypetid.).
Dacus ferrugineus Fabr. (Trypetid.).
Ceratitidis capitata Wied. (Trypetid.).
Type: B.M.

Subfamily BRACONINAE
(= *Vipioninae* Vier.)

The members of this subfamily have a wide variety of hosts, many of which are important pests. Although Thomson's genus *Ipobracon* is closely related to, and considered by some authors to be synonymous with, Foerster's genus *Iphiaulax*. I am at present retaining the identity of *Ipobracon*.

Genus ATANYCOLUS Foerster, 1862

tomentosus Szépligeti
Szépligeti (1905: 25) descr.
Loc: Queensland.
Type: N.H.M.

Genus BRACON Fabricius, 1804-05

Froggatt (1916: 561) describes a species of *Bracon* reared from *Lyctus brunneus* infesting tea chests that were imported from India.

Loc: East Coast, Australia.

Host: *Trogodendron fasciculatum* (Clerid.).

Type: B.M.

Genus **CAENOPACHYELLA** Szépligeti, 1908**lutea** Szépligeti

Szépligeti (1908: 399) ♂ ♀ descr., genotype.

Loc: New South Wales.

Type: N.H.M.

Genus **DORYCTES** Haliday, 1836**laemosacci** Nixon

Nixon (1943: 257) ♀ descr., host.

Loc: Emu Valley, Queensland.

Host: *Laemosaccus* sp. (Curculionid.).

Type: B.M.

parvus Muesebeck

Muesebeck (1941: 150) ♂ ♀ descr.

Loc: Queensland, Australia. The type locality is Mayaguez, Puerto Rico.

Type: U.S.N.M. No. 55678.

Host: *Dinoderus minutus* (Fabr.) (Type) *Lyctus* sp. (Queensland.)

Note: This is rather a common species in various tropical regions of the world.

syagrii (Fullaway)

Fullaway [*Ischiogonus*] (1922: 201) ♂ ♀ descr., host.

Loc: New South Wales.

Host: *Syagrius fulvitarsis* Pasc. (fern weevil).

Type: N.K.

Note: Fullaway (1921: 101, 114) records a species of *Doryctes* parasitic on the fern weevil (*Syagrius fulvitarsis*) from New South Wales. This probably is the same species as recorded above.

Genus **LIODORYCTES** Szépligeti, 1906

atriceps Turner

Turner (1918b: 54) ♀ descr., key.

Loc: Mackay, Queensland.

Type: B.M.

australiensis (Szépligeti)

Loc: Port Darwin, Australia.

Type: B.M.

Genus **SYNGASTER** Brullé, 1846

annulicornis Brullé

Brullé (1846: 454) descr.

Froggatt (1890: 714) listed.

Szépligeti (1904: 67) listed.

Turner (1918b: 57) noted.

Loc: Australia.

Type: N.K.

Note: Turner (1918b: 57) had not seen this species, and is doubtful of its

true generic position.

lepidus Brullé

Brullé (1846: 459) descr.

Froggatt (1890: 714) listed.

Szépligeti [*S. lepida*] (1904: 67) listed [error in spelling.]

Cameron (1912: 195).

Turner (1918b: 57) noted.

Loc: S.E. Australia; Tasmania.

Type: N.K.

INTRODUCED SPECIES

I am indebted to Mr. Frank Wilson, Principal Research Officer, C.S.I.R.O., Entomology Division, for the following list of braconids introduced into Australia in connection with biological control. No information is available on the extent to which they have become established in the various localities in which they were liberated.

**Apanteles rubecula* Marshall.

**Apanteles glomeratus* Linn.

Ascogaster carpocapsae Vier. (*A. quadridentatus* Wesm.)

Bassus diversus (Mues.) (*Agathis diversus*)

Chelonus phthorimaeae Gahan

**Macrocentrus aenylivorus* Rohwer

Microbracon gelechiae Ashmead (*Bracon gelechiae*)

Triaspis thoracicus (Say) (*T. sayi* Mues. and Walkley.)

The above species are listed under the names by which they are generally referred to in the literature, the correct nomenclature is given in parentheses where this is different.

Species that have become definitely established are marked with an asterisk and included in the body of the catalogue.

HOST INDEX OF AUSTRALIAN BRACONIDAE

Coleoptera

Coccinella californica Mann. (Coccinellid.)	196
Coleomegilla maculata (Deg.) (Coccinellid.)	196
Cycloneda trifasciata juliana Muls. (Coccinellid.)	196
Cycloneda sanguinea (Linn.) (Coccinellid.)	196
Dinoderus minutus (Fabr.) (Bostrichid)	210
Euthyrhinus meditabundus Fabr. (Curculionid.)	197
Hippodamia convergens Guer. (Coccinellid.)	196
Hippodamia 5-signata (Kby.) (Coccinellid.)	196
Laemosaceus sp. (Curculionid.)	210
Lycrus brunneus (Lyctid.)	210
Syagrius fulvitalis Pasc. (Curculionid.)	211
Trogodendron fasciculatum Schreibers (Clerid.)	197, 208, 210
Xylopsocus gibbicollis (Bostrichid.)	210

Diptera

Ceratitis capitata Wied (Tryptid.)	205
Dacus sp. (Tryptid.)	204
Dacus ferrugineus Fabr. (Tryptid.)	205
Dacus laticaudus Hardy. (Tryptid.)	204, 205
Dacus tryoni Cam. (Tryptid.)	204

Homoptera

Brevicoryne brassicae (Aphid.)	195
Mysus persicae (Sulz.) (Aphid.)	195
Rhopalosiphum pseudobrassicae (Davis) (Aphid.)	195

Lepidoptera

Agrotis sp. (Noctuid.)	201
Anthela ocellata Walk. (Lymantriid.)	200
Antheraea eucalypti Scott (Saturnid.)	200
Delias argenthona Fabr. (Pierid.)	200
Ephestia elutella Hueb. (Phycitid.)	205
Ephestia kuehniella Zell. (Phycitid.)	205
Galleria mellonella Linn. (Galleriid.)	205
Grapholita molesta Busck. (Olethreutid.)	196
Heliothis armigera Hubn. (Noctuid.)	201, 202
Leucania unipuncta Haworth (Noctuid.)	201
Ogyris genoveve How. (Lycaenid.)	201
Pheressaces cycnoptera Lowes (Noctuid.)	202
Phagmatiphila truncata Walk. (Noctuid.)	201
Pieris brassicae Linn. (Pierid.)	201
Pieris rapae Linn. (Pierid.)	201
Plodia interpunctella Hubb. (Phycitid.)	205
Plusia sp.	201
Teara tristis (Lewin) (Notodontid.)	202
Thalpocharis coccophaga (Noctuid.)	206
Theretra oldenlandiae fumata Walk. (Sphingid.)	202
Thyridopteryx herrichi West. (Psychid.)	202
Tortrix postvittana Walk. (Tortricid.)	198, 201
Usthesia pulchella Linn. (Arctiid.)	201
