

THE EFFORTS OF THREE AGENCIES  
TO CONTROL MOSQUITOES IN SUGARCANE FIELDS\*

Charles J. Wood  
Navy Environmental and Preventive Medicine  
Unit Number Six  
Pearl Harbor, Hawaii

Mosquitoes breeding in the sugarcane fields of Waipi'o peninsula have been a serious problem to the adjacent civilian and military communities for several years. The Hawaii Department of Health, Oahu Sugar Company, and the Department of the Navy are combining efforts of water management, daily surveillance, larviciding, and adult control to reduce the insect populations. An analysis of the effectiveness of these combined methods and of the cooperation between agencies is presented.
