

## Immigrant Records for 1923.

BY THE EDITOR.

The following immigrant insects are recorded for the first time, in this publication. Some have been known or collected previously, but remained undetermined or unrecorded. Those marked with an asterisk (\*) were observed or collected for the first time during the year, and hence considered as rather recent arrivals. Those marked (\*\*) were observed for the first time early in 1924, and are included here as they are listed in a paper that was finished in the latter year. For details of records, etc., refer to the pages given.
