

Giant World War II aircraft-carrying submarine discovered off Oahu coast

The Hawai'i Undersea Research Laboratory has discovered a World War II-era Imperial Japanese Navy mega-submarine, the I-400, lost since 1946 when it was intentionally scuttled by U.S. forces after its capture.

This find resolves a decades-old Cold War mystery of where the lost submarine lay, and recalls a different era as one war ended and a new, undeclared conflict emerged.

Romance of garments from a bygone era

The UH Mānoa Historic Costume Collection has 18,000 historic and ethnographic garments, the largest collection of its kind at an American university. A new crowdsourcing campaign will support the preservation of its irreplaceable holdings.

It takes two -- genes, that is

Scientists at JABSOM have discovered that only two genes in the Y chromosome of mice are needed to generate offspring using a microinjection fertilization technique developed at the school. The work could lead to a new option for overcoming infertility in men in the future.

Hawai'i tiger shark tracking

Maui has witnessed a higher number of unprovoked shark bites than in previous years. Now certain tiger sharks have been fitted with dorsal-fin mounted satellite transmitters to monitor their movements. PacIOOS lets you watch them travel.
