

# Ocean Acidification

Human Contribution  
and Solutions

Over 25% of emissions  
are absorbed by the  
ocean each year.

Carbon dioxide dissolves into  
the seawater.

By 2050 majority of marine  
ecosystems will be drastically  
destroyed.

## How You Can Help:

- Fly Less
- Biking/Walking
- Conserve Energy
- Reduce Plastic Use
- Carpool/Public Transport

Increased acidity  
contributes to the  
bleaching of coral  
reefs worldwide.
